VdB	velocity decibels
VHFHSZ	very high fire hazard severity zone
VMT	vehicle miles traveled
VOC	volatile organic compound
WQMP	water quality management plan
WSA	water supply assessment

1. Introduction

The proposed Starlite Residential Development project (proposed project) would result in the redevelopment of the 12.3-acre former Starlite Drive-in Theater site for residential uses with 207 dwelling units. The City of South El Monte, as lead agency, is responsible for preparing environmental documentation in accordance with the California Environmental Quality Act (CEQA) to determine if approval of the discretionary actions requested and subsequent development would have a significant impact on the environment. As defined by Section 15063 of the CEQA Guidelines, an Initial Study is prepared primarily to provide the leady agency with information to use as the basis for determining whether an environmental impact report (EIR), Negative Declaration (ND), or Mitigated Negative Declaration (MND) would be appropriate for providing the necessary environmental documentation and clearance for the proposed project. This Initial Study has been prepared to support the adoption of an MND.

1.1 PROJECT LOCATION

The 12.3-acre project site is in the City of South El Monte at the former Starlite Drive-in Theater site at 2540 Rosemead Boulevard. Figure 1, *Regional Location,* and Figure 2, *Local Vicinity,* show the location of the site within the regional and local contexts of Los Angeles County and the City of South El Monte, respectively. The City is in the central portion of Los Angeles County and is bordered by the cities of El Monte to the north and east, Rosemead to the west, and Whittier Narrows Natural Area to the south.

The project site is accessed off Rosemead Boulevard (State Route 164 [SR-164]), which runs north-south, and is one mile south of Interstate 10 (I-10), which runs east-west.

1.2 ENVIRONMENTAL SETTING

1.2.1 Existing Land Use

As shown in Figure 3, *Aerial Photograph,* the project site is paved and vacant except for a single-family residence at the northeast corner of the site. The drive-in's snack shop building and accessory building, convenience store, and a maintenance building in the southeast corner of the site were demolished in March 2021. Prior to COVID-19, the site was used on weekends as a swap meet.

1.2.2 Surrounding Land Use

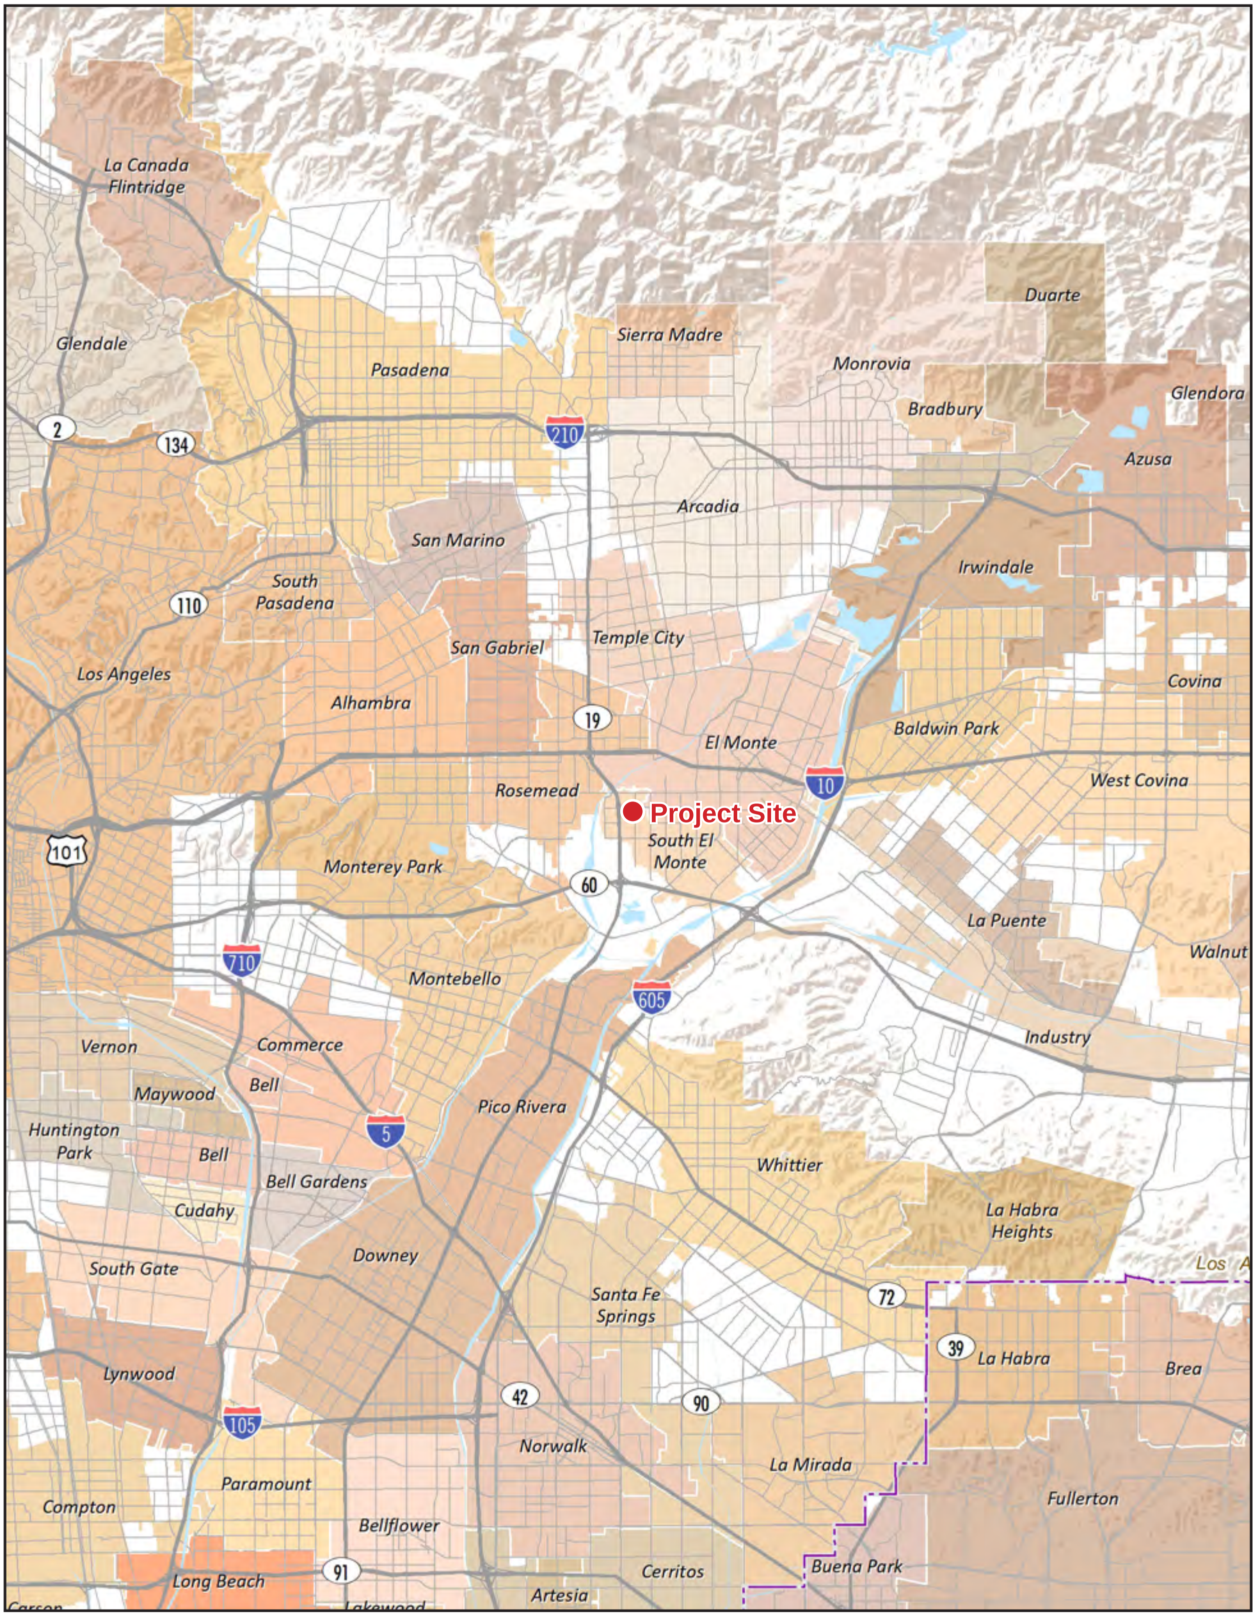
As labeled on Figure 3, *Aerial Photograph,* the site is surrounded by commercial and industrial uses to the east, south, and west, including auto spray booths, delivery truck operations, and welding operations. Multifamily residential units border the site to the north. Lot 2, which is approximately 1.2 acres, as shown in Figure 3, *Aerial Photograph,* to the west of the site, along Rosemead Boulevard, would be parceled off and remain with the current landowner.

1.3 PROJECT DESCRIPTION

1.3.1 Proposed Land Use

Figure 4, *Conceptual Site Plan,* shows the proposed project layout on the 12.3-acre site, including landscaping on-site. An additional entry would be created off of Chico Avenue at the eastern portion of the site (see Figure 5, *Circulation Plan*). The proposed project would include a traffic signal at the intersection of Rosemead Boulevard and the project entrance. The proposed project would include 207 dwelling units (169 single-family homes and 38 multifamily units); up to 10.0 percent of these units are proposed to be affordable to moderate income households. Table 1, *Starlite Residential Land Use Statistics,* provides a summary of the units by type and square footage. The proposed project would also include 9,000 square feet of recreational facilities (pool, pool deck, and recreation building). Figures 6a through 6f, *Building Elevations,* show the elevations of the proposed townhome and single-family structures, which would be three stories and vary in exterior façade, including sand stucco siding; brown, white, and blue trim; and terra cotta roofing. The maximum building height would be 35 feet and 8 inches. The proposed project would also include the demolition of the single-family home in the northeast corner of the site. A Specific Plan was developed for the proposed project and includes design guidelines to provide the framework for high quality design (see Appendix A).

Table 1 Starlite Residential Land Use Statistics



Unit Name/Type	# of Bedrooms	Square Feet/Unit	Number	Total Square Feet
TH 1	2	1,340	8	10,720
TH 2	2	1,344	8	10,752
TH 3	3	1,782	18	32,076
TH 4	3	2,138	4	8,552
SFD 1	3	1,915	41	78,515
SFD 2	3	2,018	47	94,846
SFD 3	3	2,089	59	123,251
SFD 3-ALT	3	2,100	8	16,800
SFD 4	4	2,328	14	32,592
		Total	207 units	408,104

Notes:
TH = Townhome
SFD = Single-Family Dwelling

1.3.2 Landscaping

As shown in Figure 7, *Conceptual Open Space Landscape Plan*, the proposed project's landscape plan would feature trees along both sides of the driveway off Rosemead Boulevard and along both sides of the internal drive aisle that loops around the residential units in the center of the site. Additionally, trees would be planted along the central sidewalk, at the Chico Avenue entryway, at the pool area in the southeast corner of the site, and along the eastern and southern boundaries of the site. Shrubs would line all sidewalks on the site, and an open play lawn area would be to the south and north of the proposed pool. The proposed project would provide 140,080 square feet of landscaped areas.

1.3.3 Infrastructure Improvements and Utility and Service Systems

Following is a discussion of the infrastructure improvements and utility and service systems needed to accommodate the proposed project. All proposed infrastructure and improvements would require City approval and where necessary, the approval of the utility/service provider.

1.3.3.1 WATER SYSTEM

The San Gabriel Valley Water Company (SGVWC) would provide water delivery service to the project site. As shown in Figure 8, *Water and Sewer Plan*, there are existing water lines along Chico Avenue and Rosemead Boulevard. As a part of the proposed project, new on-site water lines would connect to the existing water mains. No off-site water line construction or upsizing would be required to accommodate the proposed project. However, some construction would occur within the public right-of-way of Chico Avenue and Rosemead Boulevard in order to make the necessary infrastructure connections to the existing water mains. The proposed water system improvements would be designed and constructed in accordance with City and SGVWC requirements and would require City and SGVWC approval.

1.3.3.2 WASTEWATER SYSTEM

Wastewater generated by the proposed project would be collected within the City's local sewer collection system. The City's local sewers tie into one of the Sanitation Districts of Los Angeles County (LACSD) regional trunk sewers. As shown in Figure 8, *Water and Sewer Plan*, there are existing sewer lines along Chico Avenue and Rosemead Boulevard. As a part of the proposed project, new on-site sewer lines would connect to the existing sewer main in Rosemead Boulevard. No off-site sewer line construction or upsizing would be required to accommodate the proposed project. However, some construction would occur within the public right-of-way of Rosemead Boulevard in order to make the necessary infrastructure connections to the existing sewer main. The proposed wastewater system improvements would be designed and constructed in accordance with City and LACSD requirements and would require City and LACSD approval.

1.3.3.3 DRAINAGE SYSTEM

Under existing conditions, 87.0 percent of the site drains from east to west to a sump catch basin near the middle of the site. The catch basin drains into the Los Angeles County Flood Control District storm drain running from Rosemead Boulevard to Marybeth Lane, as shown in Figure 9, *Storm Drain Plan*. The remaining 13.0 percent of the site drains east to west toward Rosemead Boulevard.

Under proposed conditions, stormwater runoff from Lot 1 (see Figure 3, *Aerial Photograph*) would be conveyed to the same county storm drain as under existing conditions but via a new on-site drainage collection, conveyance, and treatment system shown in Figure 9, *Storm Drain Plan*. Lot 2 (1.2 acres) would be parceled off and remain with the current landowner. For Lot 1, runoff would be conveyed to a centralized pretreatment chamber before entering a drywell infiltration system. The location of the pretreatment chamber and the drywell is shown in Figure 16, *Developed Condition Hydrology Map*. If infiltration is determined to be infeasible during the final engineering phase, a biofiltration system would be proposed. The proposed drainage system

improvements would be designed and constructed in accordance with City requirements and would require City approval.

No changes are proposed to the Los Angeles County Flood Control District storm drain that runs through the project site. The project applicant/developer would submit construction/engineering plans and as-built plans to the County's engineer to obtain a permit to connect to this storm drain. All construction work in the vicinity of the storm drain would be conducted in accordance with the district's design manual guidelines and standards.

1.3.4 Project Phasing and Construction

The proposed project would be completed in one phase upon acquisition of permits. Construction is estimated to be completed in approximately 19 months, beginning in Fall 2022 and ending in Spring 2024. Construction equipment required for demolition, excavation, grading, and other building activities would include, but not be limited to, excavators, loaders, forklifts, concrete trucks, and compressors. In compliance with Section 8.20.030(D), Prohibited Acts, of the City's municipal code, construction activities are only permitted between 7 am to 10 pm Mondays through Fridays and are prohibited on weekends and holidays. An estimated 4,852 cubic yards of soil import are anticipated to require 607 total trip-ends, or 61 trip-ends per day, based on a 10-day, rough-grading, soil-haul phase.

The construction phases are:

- Asphalt and building demolition
- Building demolition debris haul
- Asphalt demolition debris on-site reprocessing
- Rough grading
- Rough grading soil haul
- Utility trenching
- Asphalt paving
- Building construction
- Architectural coating

1.4 EXISTING ZONING AND GENERAL PLAN

According to the City of South El Monte General Plan land use and zoning maps, the project site is currently designated Commercial-Manufacturing and Medium-Density Residential (MDR) and zoned Commercial Manufacturing (C-M) and Multiple Family Residential (R-3).

A General Plan Amendment would be required to change the site's land use designation to Medium Density Residential (MDR) and a Zone Change approval would be required to change the zoning to Specific Plan (SP).

Figure 10, *Existing and Proposed General Plan Land Use Designation,* and Figure 11, *Existing and Proposed Zoning Designation,* show the existing and proposed land use and zoning designations for the site.

A Vesting Tentative Tract Map for the Specific Plan area will be prepared and processed through the City in accordance with Chapter 16 of the South El Monte Municipal Code and in accordance with the Subdivision Map Act of the California Government Code.

1.5 CITY ACTION REQUESTED

This Initial Study examines the environmental impacts of the proposed Starlite Residential Development. This Initial Study is also being prepared to address various actions by the City to adopt and implement the proposed project. It is the intent of this Initial Study to enable the City, other responsible agencies, and interested parties to evaluate the environmental impacts of the proposed project and make informed decisions with respect to the requested entitlements. The discretionary actions required by the City of South El Monte and other agencies are shown in Table 2, *Discretionary Approvals Requested.*

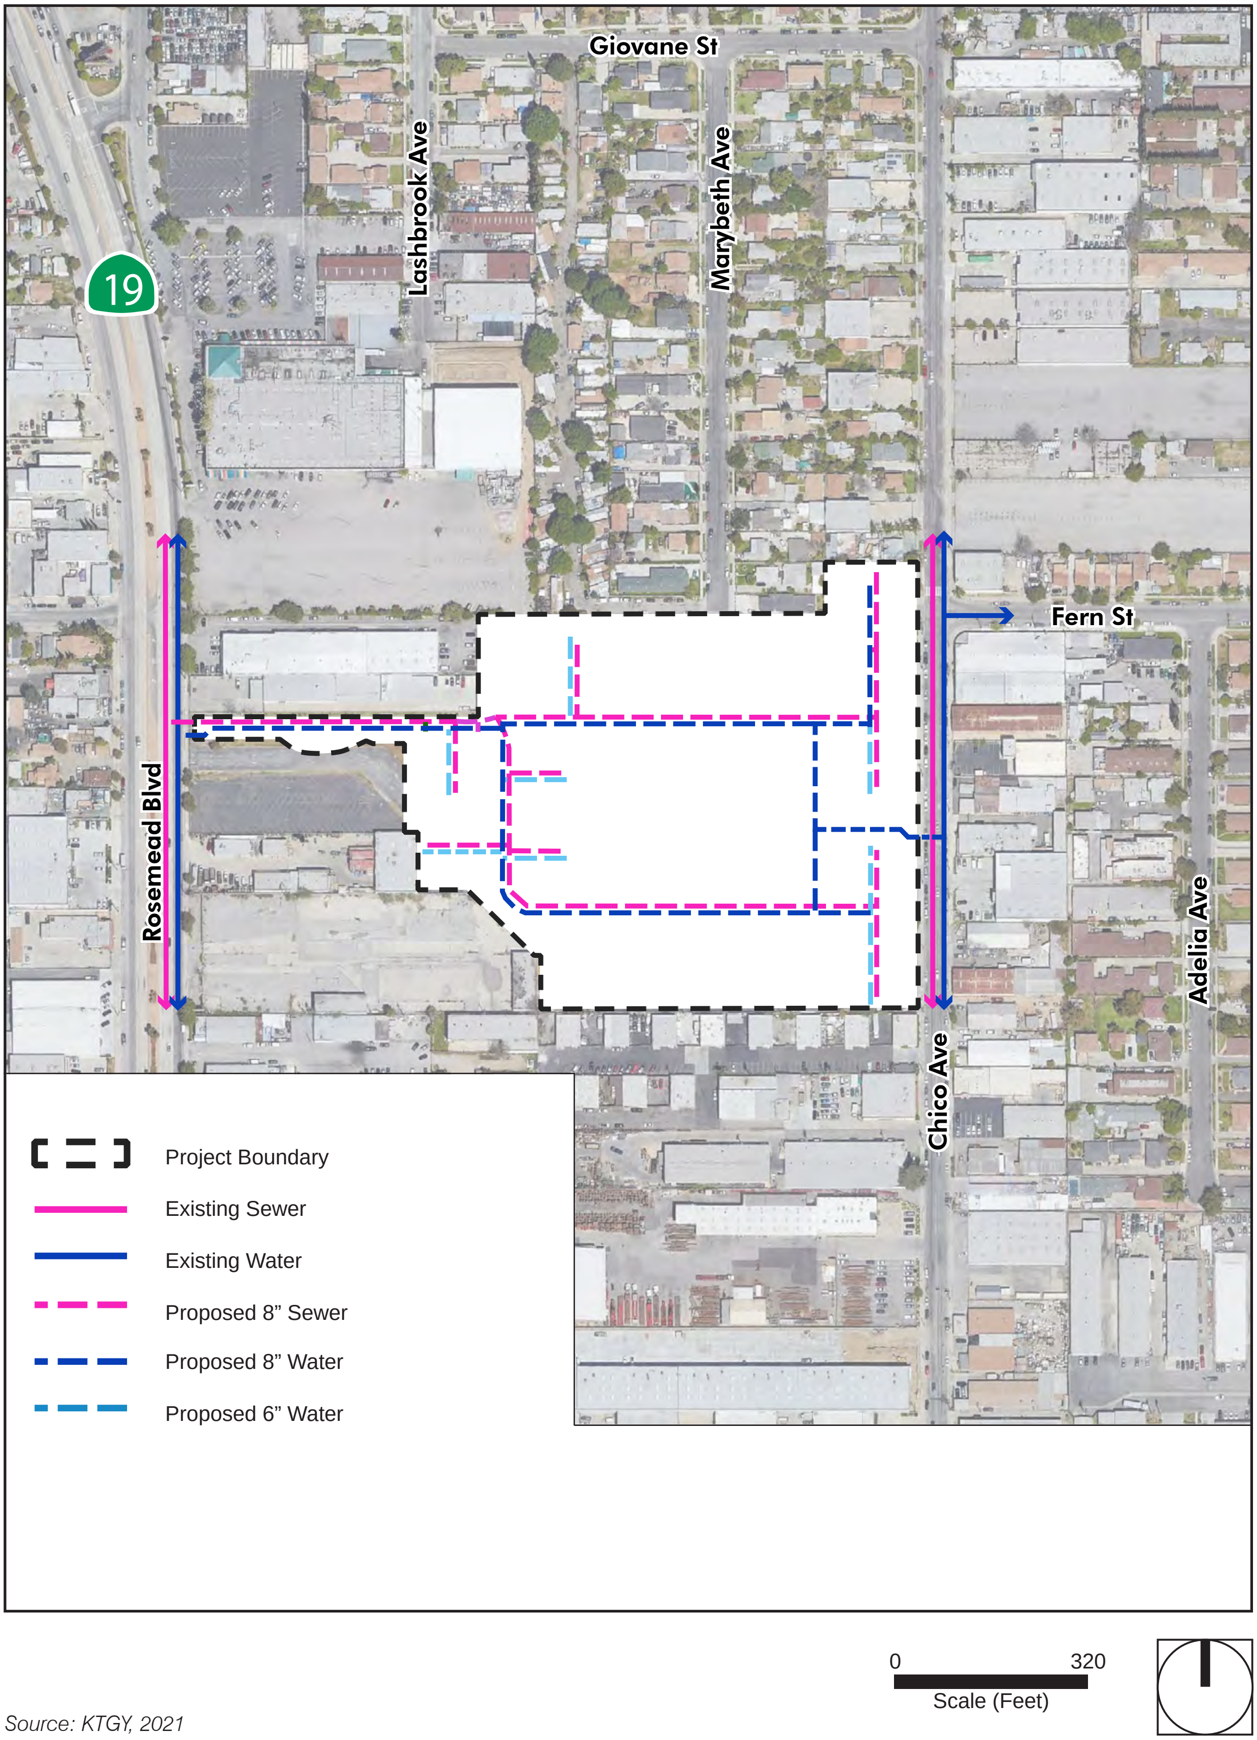

Table 2 Discretionary Approvals Requested

Agency	Entitlements/Permits Required
City of South El Monte	Mitigated Negative Declaration Adoption General Plan Amendment (GPA) Specific Plan (SP) Zone Change (ZC) Vesting Tentative Tract Map (VTTM) Lot Line Adjustment (LLA)

2. Environmental Checklist

2.1 PROJECT INFORMATION

1. Project Title: Starlite Residential Development

2. Lead Agency Name and Address:
City of South El Monte
Community Development Department
1415 Santa Anita Avenue
South El Monte, CA 91733

3. Contact Person and Phone Number:
Colby Cataldi, Community Development Director
626.579.6540

4. Project Location:
The 12.3-acre project site is in the City of South El Monte at the former Starlite Drive-in Theater site at 2540 Rosemead Boulevard.

5. Project Sponsor's Name and Address:
KB Home
10990 Wilshire Boulevard
Los Angeles, CA 90024

6. General Plan Designation: Medium-Density Residential (Proposed); Commercial-Manufacturing and Medium-Density Residential (MDR) (Existing)

7. Zoning: Specific Plan (SP) (Proposed); Commercial Manufacturing (C-M) and Multiple Family Residential (R-3) (Existing)

8. Description of Project:
The proposed project would include 207 dwelling units (169 single-family homes and 38 multifamily units), and up to 10.0 percent of these units are proposed to be at moderate level.

9. Surrounding Land Uses and Setting:
A section of the western portion of the site, along Rosemead Boulevard, would be parceled off and remain with the current landowner. The site is surrounded by commercial and industrial uses to the east, south, and west, including auto spray booths, delivery truck operations, and welding operations. Multifamily residential units border the site to the north. The project site is addressed on Rosemead

2. Environmental Checklist

Boulevard, which runs north-south and provides access to the project site. I-10 runs east-west and provides access from one mile north of the project site.

10. Other Public Agencies Whose Approval Is Required (e.g., permits, financing approval, or participating agreement):
N/A

11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

> Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21080.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.94 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

Letters were sent to tribal representatives in accordance with Senate Bill 18 and Assembly Bill 52; consultation was set up with the Gabrieleno Band of Mission Indians–Kizh Nation.

2.2 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact," as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture / Forestry Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Energy
☐ Geology/Soils	☐ Greenhouse Gas Emissions	☐ Hazards and Hazardous Materials
☐ Hydrology/Water Quality	☐ Land Use / Planning	☐ Mineral Resources
☐ Noise	☐ Population / Housing	☐ Public Services
☐ Recreation	☐ Transportation	☐ Tribal Cultural Resources
☐ Utilities / Service Systems	☐ Wildfire	☐ Mandatory Findings of Significance

2.3 DETERMINATION (TO BE COMPLETED BY THE LEAD AGENCY)

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

_______________________________	_______________________________
Signature	*Date*
_______________________________	_______________________________

2.4 EVALUATION OF ENVIRONMENTAL IMPACTS

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors, as well as general standards (e.g., the project would not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4. "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.

5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

   a) **Earlier Analyses Used.** Identify and state where they are available for review.

   b) I**mpacts Adequately Addressed.** Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

   c) **Mitigation Measures.** For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7. Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9. The explanation of each issue should identify:

   a) the significance criteria or threshold, if any, used to evaluate each question; and
   b) the mitigation measure identified, if any, to reduce the impact to less than significance.

This page intentionally left blank.

3. Environmental Analysis

This section provides an evaluation of the impact categories and questions in the checklist and identifies mitigation measures, if applicable.

3.1 AESTHETICS

Except as provided in Public Resources Code Section 21099, would the project:

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect on a scenic vista?				X
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?				X
c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?			X	
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			X	

a) Have a substantial adverse effect on a scenic vista?

No Impact. Vistas provide visual access or panoramic views to a large geographic area. The city's relatively flat topography provides scenic views of mountain ridges to the north. However, these views are often obscured by weather and poor air quality. The highly urbanized setting of the area surrounding the project site (Rosemead Boulevard to the west, Chico Avenue to the east, residential uses and Marybeth Avenue to the north, and commercial and industrial uses to the south) also obscures views of the mountains. Additionally, according to the Resources Element of the City's General Plan, none of the roads, streets, or highways meet the requirements for designation as a scenic roadway (South El Monte 2000). Therefore, impacts to scenic vistas would be less than significant.

3. Environmental Analysis

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. According to the Resources Element of the City's General Plan, there are no state-designated highways in the City. The nearest officially designated scenic highway is State Route 2 approximately 14 miles north of the project site (Caltrans 2022). Therefore, no impact would occur.

c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Less Than Significant Impact. The project site is in an urbanized area and is vacant except for a structure at the northeast corner of the site. The surrounding area consists of commercial and industrial uses to the east, south, and west and multifamily uses to the north. Although it would change the character of the site, the proposed project would be compatible with the existing development pattern and character surrounding the site, with building materials and colors that complement the existing development on adjacent properties. Furthermore, the proposed Specific Plan includes design guidelines to provide the framework for high quality design (Appendix A). The architectural design guidelines of the Specific Plan—which specify building orientation and massing, roof forms, architectural enhancements, colors and materials, and plan and elevation requirements—would express the desired character of future development, ensure a consistent level of quality, and accommodate emerging and product trends. Compliance with these standards would ensure that the proposed project would feature quality design and architecture and would be compatible with the character of the adjacent uses. Moreover, the site is currently zoned Commercial Manufacturing (C-M) and Multiple Family Residential (R-3); the C-M zone has no maximum building height requirement except when the building is constructed adjacent to a residentially zoned lot and shall have a maximum allowable height of 28 feet, and the R-3 zone allows a maximum height of 25 feet. The proposed buildings on-site would be 35 feet and 8 inches tall, which exceeds the allowable maximum height in the C-M and R-3 zones, and requires a change of zone to the Specific Plan (SP) zone. Upon approval of the SP zone, the proposed building heights would not exceed the Specific Plan's maximum building height of 36 feet. Therefore, implementation of the proposed project would not substantially degrade the existing visual character of the site and its surroundings. Impacts would be less than significant.

d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?

Less Than Significant Impact. The two major causes of light pollution are glare and spill light. Spill light is caused by misdirected light that illuminates areas outside the area intended to be lit. Glare occurs when a bright object is against a dark background, such as oncoming vehicle headlights or an unshielded light bulb. The project area includes many existing sources of nighttime illumination and glare, such as lights caused by roadway and residential uses, parking lot lights, vehicle lights, and exterior lighting from commercial and industrial uses. At buildout, the proposed project would include additional structures on-site and their related lighting sources; its implementation would likely also result in glazing (e.g., windows and doors) that could potentially result in

new sources of glare. Despite new sources of nighttime illumination and glare, the proposed project is not expected to generate a substantial increase in light and glare. Additionally, Section 17.12.260, Miscellaneous Standards, for the R-3 zone in the City's municipal code, states that lighting shall be designed to ensure that neighboring properties or public streets are protected from direct or hazardous glare. Section 17.16.210, Exterior Lighting Facilities, of the Municipal Code states that exterior lighting fixtures in the C-M zone shall be arranged in a manner that will not provide a direct glare or create hazardous interference with neighboring properties. Glare and lighting from the proposed project would be typical of residential uses and the surrounding area, and would not increase glare and lighting beyond what is expected for the project site. Therefore, impacts would be less than significant.

3.2 AGRICULTURE AND FORESTRY RESOURCES

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

	Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				X
b)	Conflict with existing zoning for agricultural use, or a Williamson Act contract?				X
c)	Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?				X
d)	Result in the loss of forest land or conversion of forest land to non-forest use?				X
e)	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?				X

3. Environmental Analysis

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact. The project site has no agricultural or farm uses on it, nor are there agricultural or farm uses in its immediate vicinity. No project-related farmland conversion impact would occur. The project site is zoned Commercial Manufacturing (C-M) and Multiple Family Residential (R-3). It is listed as Urban and Built-Up Land and is not mapped as important farmland by the Division of Land Resource Protection (DLRP 2016). Therefore, no impact would occur.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact. The zoning designation for the project site is Commercial Manufacturing (C-M) and Multiple Family Residential (R-3). The proposed project would not conflict with agricultural zoning or a Williamson Act contract because the site is not zoned for agricultural use. Williamson Act contracts restrict the use of privately owned land for agriculture and compatible open-space uses under contract with local governments; in exchange, the land is taxed based on actual use rather than potential market value. Since the project site is zoned Commercial Manufacturing (C-M) and Multiple Family Residential (R-3), there is no Williamson Act contract in effect on-site. Therefore, no impact would occur.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

No Impact. Project development would not conflict with existing zoning for forestland, timberland, or timberland production. Forest land is defined as "land that can support 10.0 percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits" (Public Resources Code § 12223 [g]). Timberland is defined as "land…which is available for, and capable of, growing a crop of trees of any commercial species used to produce lumber and other forest products, including Christmas trees" (Public Resources Code § 4526). The project site is zoned Commercial Manufacturing (C-M) and Multiple Family Residential (R-3). Therefore, no impact would occur.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. The project site is paved and contains ornamental trees. Project construction would not result in the loss or conversion of forest land. Therefore, no impact would occur.

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact. Maps from the Division of Land Resource Protection indicate that there is no important farmland or forest land on the project site or in the surrounding vicinity. Project development would not directly cause conversion of such land to nonagricultural or nonforest use. Therefore, no impact would occur.

3.3 AIR QUALITY

The Air Quality section addresses the impacts of the proposed project on ambient air quality and the exposure of people, especially sensitive individuals, to unhealthful pollutant concentrations. A background discussion on the air quality regulatory setting, meteorological conditions, existing ambient air quality in the vicinity of the project site, and air quality modeling can be found in Appendix B.

The primary air pollutants of concern for which ambient air quality standards (AAQS) have been established are ozone (O_3), carbon monoxide (CO), coarse inhalable particulate matter (PM_{10}), fine inhalable particulate matter ($PM_{2.5}$), sulfur dioxide (SO_2), nitrogen dioxide (NO_2), and lead (Pb). Areas are classified under the federal and California Clean Air Act as either in attainment or nonattainment for each criteria pollutant based on whether the AAQS have been achieved. The South Coast Air Basin (SoCAB), which is managed by the South Coast Air Quality Management District (South Coast AQMD), is designated nonattainment for O_3, and $PM_{2.5}$ under the California and National AAQS, nonattainment for PM_{10} under the California AAQS, and nonattainment for lead (Los Angeles County only) under the National AAQS (CARB 2017b).

Furthermore, the South Coast AQMD has identified regional thresholds of significance for criteria pollutant emissions and criteria air pollutant precursors, including volatile organic compounds (VOC), CO, NO_X, SO_X, PM_{10}, and $PM_{2.5}$. Development projects below the regional significance thresholds are not expected to generate sufficient criteria pollutant emissions to violate any air quality standard or contribute substantially to an existing or projected air quality violation. Where available, the significance criteria established by the South Coast AQMD may be relied upon to make the following determinations. Would the project:

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Conflict with or obstruct implementation of the applicable air quality plan?			X	
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?		X		
c) Expose sensitive receptors to substantial pollutant concentrations?			X	
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?			X	

a) Conflict with or obstruct implementation of the applicable air quality plan?

Less Than Significant Impact. The South Coast AQMD adopted the 2016 Air Quality Management Plan (AQMP) on March 3, 2017. Regional growth projections are used by South Coast AQMD to forecast future emission levels in the SoCAB. For southern California, these regional growth projections are provided by the Southern California Association of Governments (SCAG) and are partially based on land use designations

included in city/county general plans. Typically, only large, regionally significant projects have the potential to affect the regional growth projections. In addition, the consistency analysis is generally only required in connection with the adoption of General Plans, specific plans for large areas,, and significant projects.

Changes in population, housing, or employment growth projections have the potential to affect SCAG's demographic projections and therefore the assumptions in South Coast AQMD's AQMP. The project would build 207 residential units. As discussed in Section 3.14, *Population and Housing*, the proposed project's population growth would be within SCAG's forecast growth projections for the city. Additionally, as demonstrated in Section 3.3(b), the regional emissions that would be generated by the operational phase of the proposed project would be less than the South Coast AQMD emissions thresholds and therefore South Coast AQMD would not consider the project a substantial source of air pollutant emissions that would have the potential to affect the attainment designations in the SoCAB. Therefore, the proposed project would not affect the regional emissions inventory or conflict with strategies in the AQMP. Impacts would be less than significant.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Less Than Significant Impact With Mitigation Incorporated. The following describes project-related impacts from regional short-term construction activities and regional long-term operation of the proposed project.

Regional Short-Term Construction Impacts

Construction activities would result in the generation of air pollutants. These emissions would primarily be 1) exhaust from off-road, diesel-powered construction equipment; 2) dust generated by construction activities; 3) exhaust from on-road vehicles; and 4) off-gassing of VOCs from paints and asphalt.

Construction activities for the residential development are anticipated to disturb 12.40 acres[1]. The project would involve asphalt and building demolition as well as debris haul and reprocessing, grading and grading soil haul, utilities trenching, paving, building construction, and architectural coating. Construction is anticipated to start in October 2022 and finish in April 2024. Construction emissions were estimated using the California Emissions Estimator Model (CalEEMod), version 2016.3.2.25, and are based on the preliminary construction duration and equipment mix provided by the applicant. Construction emissions modeling is shown in Table 3, *Maximum Daily Regional Construction Emission,* and shows maximum daily emissions for NO_X, CO, SO_2, PM_{10}, and $PM_{2.5}$ from construction-related activities would be less than their respective South Coast AQMD regional significance threshold values. However, construction-related VOC emissions generated from paints used in architectural coating of the new structures on the project site would exceed the South Coast AQMD regional significance threshold for VOCs.

[1] The acreage disturbed used for construction modeling was based on preliminary construction data provided by the applicant. As the site is 12.3 acres, this analysis is conservative.

Table 3 Maximum Daily Regional Construction Emissions

Construction Phase	Pollutants (lb/day)[1, 2]					
	VOC	NO_X	CO	SO_2	PM_{10}	$PM_{2.5}$

South Coast AQMD Regional Construction Threshold	75	100	550	150	150	55
Significant?	Yes	No	No	No	No	No

Source: CalEEMod Version 2016.3.2.25.
1 Based on the preliminary information provided by the applicant. Where specific information regarding project-related construction activities was not available, construction assumptions were based on CalEEMod defaults, which are based on construction surveys conducted by South Coast AQMD of construction equipment.
2 Includes implementation of fugitive dust control measures required by South Coast AQMD under Rule 403, including watering disturbed areas a minimum of two times per day, reducing speed limit to 15 miles per hour on unpaved surfaces, replacing ground cover quickly, and street sweeping with Rule 1186–compliant sweepers.

However, as shown in Table 4, *Maximum Daily Regional Construction Emissions with Mitigation Incorporated,* implementation of Mitigation Measure AQ-1 would reduce construction-related emissions to below the significance thresholds by requiring use of zero-VOC-content paints for buildings' interior coating. Therefore, air quality impacts from project-related construction activities would be less than significant with incorporation of mitigation.

Mitigation Measures

Construction

AQ-1 The construction contractor(s) shall only use interior paints with a VOC (volatile organic compound) content of zero grams per liter (g/L) to reduce VOC emissions. All building and site plans shall note use of interior paints with a VOC content of 0 g/L. Prior to construction, the construction contractor(s) shall ensure that all construction plans submitted to the City's

3. Environmental Analysis

Building and Safety Department clearly show the requirement for use of interior paint with a VOC content of 0 g/L for the specified buildings.

Table 4 Maximum Daily Regional Construction Emissions with Mitigation Incorporated

3 Includes implementation of Mitigation Measure AQ-1, which would require use of paints with zero VOC content for interior coatings.

Long-Term Operation-Related Air Quality Impact

Typical long-term air pollutant emissions are generated by area sources (e.g., landscape fuel use, aerosols, architectural coatings, and asphalt pavement), energy use (natural gas), and mobile sources (i.e., on-road vehicles). The proposed project would result in the development of 207 residential units on the project site. The proposed buildings would, at minimum, be designed and built to meet the 2019 Building Energy Efficiency Standards and the 2019 California Green Building Standards Code (CALGreen). As shown in Table 5, *Maximum Daily Regional Operation Emissions,* it is anticipated that operation of the proposed project would result in overall minimal emissions and would not exceed the South Coast AQMD regional operation-phase significance thresholds. It should be noted that emissions modeling is conservative because it assumes that there are no active land uses at the project site. An optional approach would be to assume the former weekend swap meets

at the site as baseline (existing conditions), which would result in reduced "net" emissions for the proposed project. Impacts to the regional air quality associated with operation of the project would be less than significant.

Table 5 Maximum Daily Regional Operation Emissions

Source	Maximum Daily Emissions (lbs/day)					
	VOC	NO_x	CO	SO_2	PM_{10}	$PM_{2.5}$
Maximum Daily Emissions

Notes: lbs = pounds
Highest winter or summer emissions are reported.

c) Expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact. The proposed project could expose sensitive receptors to elevated pollutant concentrations if it causes or significantly contributes to elevated pollutant concentration levels. Unlike regional emissions, localized emissions are typically evaluated in terms of air concentration rather than mass so they can be more readily correlated to potential health effects.

Construction LSTs

Localized significance thresholds (LSTs) are based on the California AAQS, which are the most stringent AAQS to provide a margin of safety in the protection of public health and welfare. They are designated to protect sensitive receptors most susceptible to further respiratory distress, such as asthmatics, the elderly, very young children, people already weakened by other disease or illness, and people engaged in strenuous work or exercise. The screening-level construction LSTs are based on the size of the project site, distance to the nearest sensitive receptor, and source receptor area (SRA). The nearest off-site sensitive receptors are the residences along Marybeth Avenue bordering the project site to the north.

Air pollutant emissions generated by construction activities would cause temporary increases in air pollutant concentrations. Table 6, *Localized Construction Emissions,* shows that the maximum daily construction emissions (pounds per day) for NO_X, CO, PM_{10}, and $PM_{2.5}$ would be less than their respective South Coast AQMD screening-level LSTs. Therefore, air quality impacts from project-related construction activities would be less than significant.

3. Environmental Analysis

Table 6 Localized Construction Emissions

Construction Activity	Pollutants(lbs/day)[1]			
	NO_X	CO	PM_{10}[2]	$PM_{2.5}$[2]
South Coast AQMD **≤1.00 Acre LST**	83	673	5.00	4.00
Asphalt and Building Demolition	22	14	1.07	1.00
Utility Trenching	2	3	0.10	0.10
Asphalt Paving	7	9	0.34	0.32
Building Construction 2023	7	10	0.38	0.36
Building Construction 2024	7	10	0.33	0.31
Building Construction 2024 and Architectural Coating	9	13	0.45	0.43
Exceeds LST?	No	No	No	No
South Coast AQMD 1.50-Acre LSTs	102	852	6.00	4.50
Asphalt and Building Demolition and Debris Haul	24	16	1.76	1.17
Exceeds LST?	No	No	No	No
South Coast AQMD 2.50 Acre LST	126	805	18.07	5.94
Grading and Grading Soil Haul	21	15	3.75	2.31
Exceeds LST?	No	No	No	No
South Coast AQMD 4.50-Acre LSTs	173	1,683	12.83	8.33
Rough Grading 2022	39	29	5.34	3.04
Rough Grading 2022 and Asphalt Demolition Debris On-Site Reprocessing	42	33	5.52	3.22
Rough Grading 2023	35	28	5.13	2.85
Rough Grading 2023 and Soil Haul	35	28	5.16	2.85
Exceeds LST?	No	No	No	No

Source: CalEEMod Version 2016.3.2.25. South Coast AQMD 2008, 2011.
Notes: In accordance with South Coast AQMD methodology, only on-site stationary sources and mobile equipment are included in the analysis. Screening level LSTs are based on a distance of 82 ft to the receptor in SRA 11.
[1] Where specific information for project-related construction activities or processes was not available, modeling was based on CalEEMod defaults. These defaults are based on construction surveys conducted by the South Coast AQMD.
[2] Includes fugitive dust control measures required by South Coast AQMD under Rule 403, such as watering disturbed areas a minimum of two times per day, reducing speed limit to 15 miles per hour on unpaved surfaces, replacing ground cover quickly, and street sweeping with Rule 1186–compliant sweepers.

Construction Health Risk

Emissions from construction equipment primarily consist of diesel particulate matter. In 2015, the Office of Environmental Health Hazards Assessment adopted guidance for preparation of health risk assessments that included the development of a cancer risk factor and noncancer chronic reference exposure level for diesel particulate matter over a 30-year time frame (OEHHA 2015). Currently, South Coast AQMD does not require the evaluation of long-term excess cancer risk or chronic health impacts for a short-term project. The proposed project is anticipated to be completed in approximately 19 months, which would limit the exposure of on-site and off-site receptors. Furthermore, construction activities would not generate on-site exhaust emissions that would exceed the screening-level construction LSTs. Thus, construction emissions would not pose a health risk to on- and off-site receptors, and project-related construction health impacts would be less than significant.

Operation LSTs

Operation of the proposed project would not generate substantial emissions from on-site stationary sources. Land uses that have the potential to generate substantial stationary sources of emissions include industrial land uses, such as chemical processing and warehousing operations with truck idling on-site, that would require a permit from South Coast AQMD. The proposed project does not fall within these categories of uses. While operation of the new buildings would use standard on-site mechanical equipment such as heating, ventilation, and air conditioning, air pollutant emissions would be nominal. Localized air quality impacts related to operation-related emissions would be less than significant.

Carbon Monoxide Hotspots

Vehicle congestion has the potential to create pockets of CO called hotspots. Hotspots are typically produced at intersections, where traffic congestion is highest because vehicles are backed up and idle for longer periods and are subject to reduced speeds. These pockets could exceed the state one-hour standard of 20 parts per million or the eight-hour standard of 9.0 parts per million. Because CO is produced in the greatest quantities from vehicle combustion and does not readily disperse into the atmosphere, adherence to AAQS is typically demonstrated through an analysis of localized CO concentrations.

The SoCAB has been designated attainment under both the national and California AAQS for CO. Under existing and future vehicle emission rates, a project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour—or 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited—in order to generate a significant CO impact (BAAQMD 2017). The project-related 189 PM peak hour vehicle trips would be minimal compared to the AAQS screening levels. The project would not substantially increase CO hotspots at intersections, and impacts would be less than significant.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less Than Significant Impact. The proposed project would not result in objectionable odors. The threshold for odor is if a project creates an odor nuisance pursuant to South Coast AQMD Rule 402, Nuisance, which states:

> A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. The provisions of this rule shall not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals.

The type of facilities that are considered to have objectionable odors include wastewater treatments plants, compost facilities, landfills, solid waste transfer stations, fiberglass manufacturing facilities, paint/coating operations (e.g., auto body shops), dairy farms, petroleum refineries, asphalt batch plants, chemical manufacturing, and food manufacturing facilities. The proposed project involves construction of a residential development and would not fall within the objectionable odors land uses. Emissions from construction

equipment, such as diesel exhaust and VOCs from architectural coatings and paving may generate odors. However, these odors would be low in concentration, temporary, and would not affect a substantial number of people. Odor impacts would be less than significant.

3.4 BIOLOGICAL RESOURCES

Would the project:

	Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?				X
b)	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?				X
c)	Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				X
d)	Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?			X	
e)	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				X
f)	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				X

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

No Impact. The project site, the former Starlite Drive-in Theater, is paved and contains ornamental trees. Prior to COVID-19, the project site was used as a swap meet on weekends. The project site and surroundings are situated in an urban, built-up area. The City's General Plan Resources Element states that there are no rare or endangered species of plants, fish, or wildlife because the City is built out. When the site operated as a swap meet, there were frequent disturbances on-site. Therefore, the site does not have native habitat and no habitat suitable for sensitive species on-site. No impact would occur either directly or through habitat modification.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

No Impact. Sensitive natural communities are considered rare in the region by regulatory agencies, are known to provide habitat for sensitive animal or plant species, or are known to be important wildlife corridors. Riparian habitats occur along the banks of rivers and streams. No sensitive natural community or riparian habitat is present on-site, and no impact would occur (Wetlands Mapper 2020).

c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact. The site is fully paved, and there are no wetlands on-site (Wetlands Mapper 2020). Therefore, the proposed project would not have an adverse effect on wetlands, and no impact would occur.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less Than Significant Impact. Corridors refer to established migration routes commonly used by resident and migratory species for passage from one geographic location to another. Movement corridors may provide favorable locations for wildlife to travel between different habitat areas, such as foraging sites, breeding sites, cover areas, and preferred summer and winter ranges. They may also function as dispersal corridors allowing animals to move between various locations within their range.

Although the project site is in an urbanized and built-up environment, the trees on-site could be used for nesting by birds protected under the Migratory Bird Treaty Act (MBTA) (US Code Title 16, Sections 703 to 712) and California Fish and Game Code (Sections 3503 et seq.).

Compliance with the MBTA requires:

- Avoiding grading activities during the nesting season, February 15 to August 15.
- Or, if grading activities are to be undertaken during the nesting season, a site survey for nesting birds by a qualified biologist before commencement of grading activities. If nesting birds are found, the applicant would consult with the USFWS regarding means to avoid or minimize impacts to nesting birds.

Impacts would be less than significant with compliance with the MBTA.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

No Impact. The City of South El Monte does not have an ordinance protecting biological resources on private property. Therefore, no impact would occur.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. The project site is not within a natural community conservation plan or habitat conservation plan area (CDFW 2019). The project site does not contain sensitive biological resources, and there are no local policies protecting biological resources applicable to the site. No impact would occur.

3.5 CULTURAL RESOURCES

The analysis in this section is based in part on the following technical study:

- *Cultural and Paleontological Resources Assessment for the Starlite Residential Project,* Cogstone, May 2021 (Appendix C-a)
- *Mitigation Measures for the Cultural and Paleontological Resources Assessment for the Starlite Residential Project,* Cogstone, July 9, 2021 (Appendix C-b)

Would the project:

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?		X		
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?		X		
c) Disturb any human remains, including those interred outside of dedicated cemeteries?			X	

a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?

Less Than Significant Impact with Mitigation Incorporated. Section 15064.5 defines historic resources as resources listed or determined to be eligible for listing by the State Historical Resources Commission, a local register of historical resources, or the lead agency. Generally, a resource is considered "historically significant" if it meets one of the following criteria:

1) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
2) Is associated with the lives of persons important in our past.
3) Embodies the distinctive characteristics of a type, period, region or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
4) Has yielded, or may be likely to yield, information important in prehistory or history.

A records search of the California Historic Resources Information System (CHRIS) indicated that 17 previous studies have been completed within a half-mile of the project site. There are no previous studies for the project site (Cogstone 2021, Appendix C-a). The records search also determined there are no previously recorded resources within the project site boundaries. One historic resource, an overhead electrical transmission line, is within a half-mile of the project site.

Due to the demolition of the original projection screen in 1997 and the recent demolition of additional features (e.g., the snack shop and projection booth), the drive-in as a whole has lost a substantial degree of integrity of materials, workmanship, design, and feeling. Therefore, as a whole, the Starlite Drive-in Theater is not recommended to be eligible for listing in the California Register of Historical Resources (CRHR) under Criterion 1 due to a substantial loss of integrity. However, the Starlite Drive-in Theater sign retains much of its integrity and association with its historic period of significance. The existing condition of the Starlite sign is shown in Figure 12, *Existing Starlite Drive-in Sign.* The Starlite Drive-in Theater sign meets the standards for listing in the CRHR and is recommended eligible for individual listing under Criterion 1 for its association with drive-in theater history in America. Additionally, the Starlite Drive-in Theater sign retains much of its integrity and is a fine example of Streamline Modern / Googie style, which was prevalent at the time of its conception. It is also a presentation of the artistic esthetic of 1950s America and the surviving work of J. Arthur Drielsma, the drive-in's architect. Thus, the Starlite Drive-in Theater sign is also recommended individually eligible for listing in the CRHR under Criterion 3. Mitigation Measures CUL-1, CUL-2, and CUL-3 would ensure impacts to the sign are reduced to a less than significant level.

Additionally, the demolished maintenance building in the southeast corner of the site did not meet eligibility for listing under the CRHR because this property had lost a substantial degree of its original feeling and setting due to the addition of commercial buildings, the construction of the drive-in's wood fence, and the demolition of nearby ancillary and residential buildings. Therefore, impacts would be less than significant.

Mitigation Measures

The following mitigation measures outline the requirements to mitigate the potentially significant impacts to the Starlite Drive-In Theatre sign. Preliminary plans to restore the sign in accordance with these requirements are shown in Figure 13, *Starlite Drive-In Sign Restoration Plan.*

CUL-1 Prior to any rehabilitation, restoration, or relocation, a thorough documentation of the sign, similar to a HABS/HAER report, will be completed. This report will document the sign's materials, design, character defining features, measurements, and condition of materials . This report will be used to track changes of the sign and provide a guide for future repair work. Copies will be submitted to one local and one state repository. Restoration, movement, and other handling of the Starlite Drive-In sign will be documented as an update to the Department of Parks and Recreation (DPR) record for the sign by the qualified architectural historian if restored, or similarly qualified personnel of the recipient organization if donated, and filed at the South Central Coastal Information Center and at a local library or historical society.

3. Environmental Analysis

CUL-2 The project proponent shall preserve, restore, or rehabilitate the Starlite Drive-In sign, including all historic components, in accordance with the Secretary of the Interior standards based on guidance in NPS Technical Brief 25, The Preservation of Historic Signs https://www.nps.gov/tps/how-to-preserve/briefs/25-signs.htm . To this end, the proponent shall retain a qualified architectural historian to develop a treatment plan for the work detailing a general timeline, changes to be made to the sign, which tasks are anticipated to be completed off-site (e.g. welding, soldering, glasswork), and to oversee the work. Following approval of the HABS/HAER similar documentation, the qualified architectural historian will ensure that the materials are placed on file with the City of South El Monte and responsible agencies, historical societies and preservation groups, local university and community libraries, and other appropriate national and local repositories and archives, as identified by the City of South El Monte. The qualified architectural historian will prepare a brief report detailing the restoration process to show compliance with standards in NPS Bulletin 25.

CUL-3 The Starlite Drive-In sign may be moved a short distance, so long at it remains within the property boundaries of the drive-in and remains highly visible from Rosemead Boulevard. Alternatively, the sign may be donated to a local historical society for eventual restoration and display. In either case the sign shall be moved by a construction company experienced in handling historic building and structures. The move shall be supervised by the qualified architectural historian, in case of restoration, or recipient organization, in case of donation.

This mitigation measure pertains to movement of the sign from its current location to an eventual new final location. Temporary removal of portions of the sign for repair, refurbishment, or replication is anticipated to be necessary, and will be covered in the treatment plan.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?

Less Than Significant Impact With Mitigation Incorporated. A pedestrian survey was conducted due to the heavily developed nature of the site. No archaeological resources were observed on-site (Cogstone 2021). Though the pedestrian survey and cultural resources search did not identify prehistoric archaeological resources within or near the project site, the open pit on-site during the recent demolition showed that intact native young alluvium sediments are present at approximately two to three feet below the modern ground surface. Coupled with the positive Sacred Land Files search result for the site, the project site is assessed to have moderate sensitivity for buried prehistoric archaeological resources. Analysis of the cultural record search, pedestrian survey, historical USDA aerial photographs, and USGS topographic quadrangle maps indicate that the Project Area has a low sensitivity for significant buried historical archaeological features such as foundations or trash pits. With the implementation of Mitigation Measures CUL-4 and CUL-5, impacts would be reduced to less than significant.

3. Environmental Analysis

This page intentionally left blank.

Mitigation Measures

CUL-4 Prior to the beginning of ground disturbances, the project proponent shall retain an archaeologist meeting Secretary of the Interior Standards (SOI) to oversee spotcheck cultural resources monitoring of all excavations two feet and deeper within the project area. Spotchecks should occur weekly on average, and no less often than once every seven days that ground disturbance occurs. If a cultural object is uncovered the qualified monitor shall be empowered to temporarily redirect work away from the find while it is evaluated. Work can continue a minimum of 50 feet away from the find. For finds that are not significant, work may resume immediately after the find is documented and removed. If a find is significant, a mitigation plan must be developed, and mitigation completed, prior to work continuing within the 50-foot cordon.

CUL-5 Prior to the beginning of ground disturbances, the qualified monitor will give a short Worker Environmental Awareness Program training presentation prepared by the SOI qualified supervising archaeologist to all construction staff. This presentation will inform construction personnel what cultural resources may be uncovered during the ground-disturbing phases of the project and what to do in case of a find.

c) Disturb any human remains, including those interred outside of dedicated cemeteries?

Less Than Significant Impact. The project site would require demolition, ground clearing, excavation, grading, and other construction activities. California Health and Safety Code, Section 7050.5; CEQA Section 15064.5; and Public Resources Code, Section 5097.98, mandates the process to be followed in the event of an accidental discovery of any human remains in a location other than a dedicated cemetery. Health and Safety Code Section 7050.5 requires that if human remains are discovered on a project site, disturbance of the site shall remain halted until the coroner has conducted an investigation into the circumstances, manner, and cause of any death, and the recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation or to his or her authorized representative, in the manner provided in Section 5097.98 of the Public Resources Code. If the coroner determines that the remains are not subject to his or her authority and has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission. In the unlikely event that soil-disturbing activities result in the discovery of human remains, compliance with existing law would ensure that the proposed project would not have significant impacts on human remains.

3. Environmental Analysis

3.6 ENERGY

Would the project:

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			X	
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			X	

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less Than Significant Impact.

Construction

During construction, the proposed project would consume energy in two general forms: (1) the fuel energy consumed by construction vehicles and equipment; and (2) bound energy in construction materials, such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass.

Construction of the proposed project would require the use of construction equipment for grading, hauling, and building activities. Electricity use during construction would vary during different phases of construction—the majority of construction equipment during demolition and grading would be gas or diesel powered, and the later construction phases would require electricity-powered equipment, such as interior construction and architectural coatings. Construction also includes the vehicles of construction workers traveling to and from the project site and haul trucks for the export of materials from site clearing.

The surrounding area and project site are already served with electricity by Southern California Edison (SCE) and natural gas infrastructure provided by the Southern California Gas Company. Adequate infrastructure capacity in the vicinity of the site would be available to accommodate the electricity and natural gas demand for construction activities and would not require additional or expanded infrastructure.

The construction contractors would minimize idling of construction equipment, as required by state law, and reduce construction waste by recycling. These required practices would limit wasteful and unnecessary electrical energy consumption. Furthermore, there are no unusual project characteristics that would necessitate the use of construction equipment that is less energy efficient than at comparable construction sites in other parts of the state. Therefore, the proposed short-term construction activities would not result in inefficient, wasteful, or unnecessary fuel consumption.

Transportation

Transportation energy use depends on the type and number of trips, vehicle miles traveled, fuel efficiency of vehicles, and travel mode. Transportation energy use during construction would come from the transport and use of construction equipment, delivery vehicles and haul trucks, and construction employee vehicles that would use diesel fuel and/or gasoline. The use of energy resources by these vehicles would fluctuate according to the phase of construction and would be temporary. The majority of construction equipment during demolition and grading would be gas or diesel powered, and the later construction phases would require electricity-powered equipment. Impacts related to transportation energy use during construction would be temporary and would not require expanded energy supplies or the construction of new infrastructure. Impacts would not be significant.

Operation

Operational use of energy would include heating, cooling, and ventilation of buildings; water heating; operation of electrical systems, security, and control center functions; use of on-site equipment and appliances; and indoor, outdoor, perimeter, and parking lot lighting. Additionally, the proposed project would operate as residential uses and would not result in an excessive consumption of energy compared to other residential uses. The Specific Plan includes sustainability guidelines, which include energy-efficiency recommendations such as using passive sustainable design strategies, including daylighting; natural sources of heating and cooling; operable windows; and encouraging coordination with SCE to identify opportunities to optimize energy infrastructure.

Electricity

In 2019, the latest year for which data are available, SCE provided over 84,654 gigawatt-hours of electricity to its customers (SCE 2019). The proposed project is expected to generate a demand of 1,577,002 kilowatt-hours per year (see Section 3.19, *Utilities and Service Systems*). Prior to final building plan submittal, the project applicant would provide project plans to SCE to prepare a Method-of-Service Study to determine the exact location of electrical connections at the site and establish estimated electricity demand. Additionally, because the proposed project would be subject to the more stringent 2019 Title 24 Standards, the project's electricity demand would not be a substantial increase. Therefore, impacts are less than significant.

Natural Gas

The proposed project would construct new structures on the project site that would result in an increase in gas demands. The use of natural gas would be limited to building heating, water heaters, and gas stoves/ovens and would create a demand of 4,954,623 kilo–British thermal unit per year (see Section 3.19, *Utilities and Service Systems*). Therefore, impacts are less than significant.

Renewable Energy

Project development would not interfere with achievement of the 60.0 percent Renewable Portfolio Standard in SB 100 for 2030 or the 100 percent standard for 2045. These goals apply to SCE and other electricity retailers. As electricity retailers reach these goals, emissions from end-user electricity use will decrease from current emission estimates.

Vehicle Miles Traveled and Fuel Consumption

Transportation energy use depends on the type and number of trips, vehicle miles traveled (VMT), fuel efficiency of vehicles, and travel mode. Transportation energy used during operation of the site would come from resident and visitor vehicles that would typically use diesel fuel and/or gasoline, although some vehicles may be electric cars or hybrids. The use of energy resources by these vehicles would be temporary and would fluctuate throughout the lifespan of the project. The Traffic Impact Assessment (see Appendix D-a) shows that the proposed project would generate 1,874 daily trips and a VMT per capita of 12.67 (approximately 2,620 VMT per day). When compared to the City VMT baseline value of 15.75 home-based VMT per capita and the 15.0 percent below baseline significant value of 13.39, impacts would be less than significant because the proposed project would not generate substantial daily trips.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Less Than Significant Impact. The City of South El Monte is in SCAG's 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), a long-range plan that balances future mobility and housing needs with economic, environmental, and public health goals.

The RTP/SCS sets forth a development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, would reduce GHG emissions from transportation (excluding goods movement). The RTP/SCS is meant to provide individual jurisdictions with growth strategies that, when taken together, achieve the regional GHG emissions reduction targets. Specifically, the SCS distributes growth forecast data to transportation analysis zones for the purpose of modeling performance. The City of South El Monte has an Energy Action Plan that identifies the City's long-term vision and commitment to achieve energy efficiency in the community and in government operations (SGVEWP 2012). Additionally, development on the site would be subject to 2019 Title 24, Part 6 Standards, which set standards to improve energy efficiency of newly constructed buildings. Additionally, all contractors and waste haulers are required to comply with the Countywide Integrated Waste Management Plan and divert a minimum of 50.0 percent of waste project materials from disposal. Therefore, the proposed project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Impacts would be less than significant.

3.7 GEOLOGY AND SOILS

The analysis in this section is based in part on the following technical studies:

- *Geotechnical Investigation,* RMA GeoScience, September 1, 2020 (Appendix E)
- *Cultural and Paleontological Resources Assessment for the Starlite Residential Project,* Cogstone, May 2021 (Appendix C)

Would the project:

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map, issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			X	
ii) Strong seismic ground shaking?			X	
iii) Seismic-related ground failure, including liquefaction?		X		
iv) Landslides?			X	
b) Result in substantial soil erosion or the loss of topsoil?			X	
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			X	
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?			X	
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?				X
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?		X		

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning map, issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Less Than Significant Impact. According to the Geotechnical Report, the project site is not within an Alquist-Priolo Earthquake Fault Zone, and there are no known active faults on or immediately adjacent to the project site (RMA 2020; Appendix E). Therefore, impacts would be less than significant.

ii) Strong seismic ground shaking?

Less Than Significant Impact. As with the rest of southern California, the project site is near faults that could cause moderate to intense ground shaking during the lifetime of the proposed project. The closest

zoned fault is the East Montebello fault zone, about 1.35 miles southwest of the site. The project site is at no greater risk for seismic activity than the surrounding development and infrastructure. All future development would be built to adhere to the most current California Building Code (CBC), which provides minimum standards to protect property and public welfare by regulating design and construction to mitigate the effects of seismic shaking and adverse soil conditions. Compliance with the standards of the most current CBC would reduce impacts from ground shaking to a less than significant level.

iii) Seismic-related ground failure, including liquefaction?

Less Than Significant Impact With Mitigation Incorporated. Liquefaction refers to loose, saturated sand or gravel deposits that lose their load supporting capability when subjected to intense shaking. The project site lies within a "Zone of Required Investigation for Liquefaction." Static groundwater was encountered at a depth of approximately 53 feet below ground level. However, according to the California Division of Mines and Geology Seismic Hazard Zone Report for El Monte Quadrangle, the historical high groundwater table is approximately five feet below grade. The Geotechnical Report ran a model using the site lithology and the historical high groundwater table of five feet below grade and found that much of the site soils are liquefiable during an earthquake if groundwater was to rise to historical levels. Implementation of Mitigation Measure GEO-1 would reduce liquefaction impacts to a less than significant level.

The Geotechnical Report anticipates that total settlement (static and seismic) would be less than 3 inches, with differential settlement (static and seismic) of less than 1.5 inches in a 40-foot span. The Geotechnical Report states that over-excavation would occur; that these areas must be satisfactory for the support of fills; and that soils must be compacted to at least 90.0 percent relative compaction. Given the recommendations of the Geotechnical Report and the requirements of the California Building Code structural measures, total settlement would be less than significant.

Mitigation Measure

GEO-1 Once submitted, a qualified geotechnical professional shall review formal plans for site development and update/refine recommendations included in the Geotechnical Report, as appropriate. Additional site-specific data shall be used, if needed, to create an appropriate foundation design for all structures that mitigates the potential liquefaction conditions in accordance with the California Building Code and City of South El Monte building standards.

iv) Landslides?

Less Than Significant Impact. According to the California Geological Survey Seismic Hazard Zones Map of the El Monte Quadrangle, the project site does not lie in a landslide hazard zone. Since the site is relatively flat, earthquake-induced landslides would not be a hazard to the proposed project. Therefore, impacts would be less than significant.

b) Result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. Erosion is a normal and inevitable geologic process where earthen materials are loosened, worn away, decomposed, or dissolved; removed from one place; and transported to another. Development under the proposed project would implement structural and nonstructural best management practices (BMPs) before and during construction to control surface runoff and erosion to retain sediment on the project site. Additionally, since this project involves clearing, grading, or excavation that causes soil disturbance of one or more acres, it is subject to the provisions of the National Pollutant Discharge Elimination System (NPDES) State General Permit. Furthermore, the proposed project would be required to prepare and comply with an approved Storm Water Pollution Prevention Plan (SWPPP) that provides a schedule for the implementation and maintenance of erosion control measures and a description of the erosion control practices, including appropriate design details and a time schedule. The SWPPP would consider the full range of erosion control BMPs, including any additional site-specific and seasonal conditions. The State General Permit also requires that those implementing SWPPPs meet prerequisite qualifications that would demonstrate the skills, knowledge, and experience necessary to implement such plans. NPDES requirements would significantly reduce the potential for substantial erosion of topsoil to occur in association with new development. Once the project is constructed, soil erosion would be controlled with improvements installed on the project site. Therefore, impacts would be less than significant.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Less Than Significant Impact With Mitigation Incorporated. As discussed in question 3.7.a(iv), the project site is not in a landslide hazard zone; impacts would be less than significant. Lateral spreading is a phenomenon where large blocks of intact, nonliquefied soil move downslope on a large liquefied substratum. The mass moves toward an unconfined area, such as a descending slope or stream-cut bluff, and has been known to move on slope gradients as little as one degree. The project site is relatively flat, and impacts would be less than significant. Moreover, subsidence of basins attributed to overdraft groundwater aquifers or overpumping of petroleum reserves has been reported in various parts of southern California. Because static groundwater was encountered at a depth of 53 feet, the probability of collapse, or subsidence is low.

Implementation of the CBC and other related construction standards apply seismic requirements and address certain grading activities. The CBC includes common engineering practices requiring special design and construction methods that reduce or eliminate potential impacts related to unstable soils. Compliance with CBC regulations and Mitigation Measure GEO-1 would ensure impacts are less than significant.

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less Than Significant Impact. Expansive soils swell when they become wet and shrink when they dry out, and result in the potential for cracked building foundations. According to the Geotechnical Report, the soils at shallow depths are expected to have an expansion index in the very low range. Therefore, impacts would be less than significant.

3. Environmental Analysis

e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No Impact. Future development under the proposed project would not require the installation of septic tanks or alternative wastewater disposal system, but would utilize the local sewer system. Therefore, no impact would occur.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less Than Significant Impact With Mitigation Incorporated. According to the cultural resources report, no recorded paleontological localities producing vertebrate fossils were found within the project site or within a mile radius of the project site. However, the Natural History Museum of Los Angeles County records localities near the project site with the same or similar sedimentary deposits (Cogstone 2021; Appendix C-a). The closest locality the museum has recorded is approximately 5.5 miles west of the project site, which produced a fossil of an extinct horse. Based upon records of fossils found in similar sediments nearby, no paleontological monitoring is recommended for the mass excavations. Drilling or pile-driving activities, regardless of depth, have a low potential to produce fossils meeting the significance criteria because any fossils brought up by the auger during drilling would not have information about formation, depth, or context (Cogstone 2021). The only instance in which such fossils would meet significance criteria is if the fossil is a species new to the region. Regardless, Mitigation Measure GEO-2 and Mitigation Measure GEO-3 would be implemented to reduce potential impacts to unanticipated discoveries to less than significant.

Mitigation Measures

GEO-2 If unanticipated fossil discoveries are made, all work must halt within 50 feet until a qualified paleontologist can evaluate the find and determine the appropriate disposition of the resource. Work may resume immediately outside of the 50-foot radius.

GEO-3 Prior to the beginning of ground disturbances, a qualified paleontologist shall provide a short Worker Environmental Awareness Program training presentation t to all construction staff. This presenter may be the same specialist specified in MM CUL-4 if that presenter meets both the archaeologist (see MM CUL-3) and paleontologist qualification requirement. This presentation will inform construction personnel what paleontological resources may be uncovered during the ground-disturbing phases of the project and what to do in case of a find.

3.8 GREENHOUSE GAS EMISSIONS

Scientists have concluded that human activities are contributing to global climate change by adding large amounts of heat-trapping gases, known as greenhouse gases (GHGs), into the atmosphere. The primary source of these GHG is fossil fuel use. The Intergovernmental Panel on Climate Change has identified four major GHGs—water vapor, carbon dioxide (CO_2), methane (CH_4), and ozone (O_3)—that are the likely cause of an increase in global average temperatures observed in the 20th and 21st centuries. Other GHGs identified by the

3. Environmental Analysis

Intergovernmental Panel that contribute to global warming to a lesser extent include nitrous oxide (N_2O), sulfur hexafluoride (SF_6), hydrofluorocarbons, perfluorocarbons, and chlorofluorocarbons.[2]

Information on manufacture of cement, steel, and other "life cycle" emissions that would occur as a result of the project are not applicable and are not included in the analysis.[3] Black carbon emissions are not included in the GHG analysis because the California Air Resources Board (CARB) does not include this short-lived climate pollutant in the state's Senate Bill 32 (SB 32) inventory but treats it separately.[4] A background discussion on the GHG regulatory setting and GHG modeling is in Appendix B to this Initial Study.

Would the project:

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			X	
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?			X	

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less Than Significant Impact. Global climate change is not confined to a particular project area and is generally accepted as the consequence of global industrialization over the last 200 years. A typical project, even a very large one, does not generate enough GHG emissions on its own to influence global climate change significantly; hence, the issue of global climate change is, by definition, a cumulative environmental impact.

Project-related GHG emissions are shown in Table 7, *Project-Related GHG Emissions*. Implementation of the proposed project would result in 207 new residential units. The proposed project would generate 1,874 weekday

---

[2] Water vapor (H_2O) is the strongest GHG and the most variable in its phases (vapor, cloud droplets, ice crystals). However, water vapor is not considered a pollutant, but part of the feedback loop rather than a primary cause of change.

[3] Life cycle emissions include indirect emissions associated with materials manufacture. However, these indirect emissions involve numerous parties, each of which is responsible for GHG emissions of their particular activity. The California Resources Agency, in adopting the CEQA Guidelines Amendments on GHG emissions found that lifecycle analyses was not warranted for project-specific CEQA analysis in most situations, for a variety of reasons, including lack of control over some sources, and the possibility of double-counting emissions (CNRA 2018). Because the amount of materials consumed during the operation or construction of the proposed project is not known, the origin of the raw materials purchased is not known, and manufacturing information for those raw materials are also not known, calculation of life cycle emissions would be speculative. A life-cycle analysis is not warranted (OPR 2008).

[4] Particulate matter emissions, which include black carbon, are analyzed in Section 3.3, Air Quality. Black carbon emissions have sharply declined due to efforts to reduce on-road and off-road vehicle emissions, especially diesel particulate matter. The state's existing air quality policies will virtually eliminate black carbon emissions from on-road diesel engines within 10 years (CARB 2017a.).

3. Environmental Analysis

vehicle trips, 1,922 Saturday vehicle trips, and 1,684 Sunday vehicle trips. Furthermore, operation of the proposed project would result in an increase in water demand, wastewater and solid waste generation, area sources (e.g., consumer cleaning products), and energy usage (i.e., natural gas and electricity). Annual average construction emissions were amortized over 30 years and included in the emissions inventory to account for one-time GHG emissions from the construction phase of the project. Overall, development and operation of the proposed project would not generate annual emissions that exceed the South Coast AQMD bright-line threshold equivalent to 3,000 metric tons of carbon dioxide ($MTCO_2e$) per year (South Coast AQMD 2010). Therefore, the proposed project's cumulative contribution to GHG emissions would be less than significant.

Table 7 Project-Related GHG Emissions

Source	GHG ($MTCO_2e$/Year)
Area	4
Energy	648
Mobile (Vehicle Trips)	1,319
Solid Waste	163
Water	57
Amortized Construction Emissions[1]	17
Total	2,207
South Coast AQMD Bright-Line Threshold	3,000 $MTCO_2e$/Yr
Exceeds Bright-Line Threshold?	No

Source: CalEEMod, Version 2016.3.2.25.
Notes: MTons = metric tons; $MTCO_2e$ = equivalent to a metric ton of carbon dioxide
[1] Total construction emission are amortized over 30 years per South Coast AQMD methodology.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

No Impact. Applicable plans adopted for the purpose of reducing GHG emissions include CARB's Scoping Plan and SCAG's RTP/SCS. A consistency analysis with these plans is presented below.

CARB Scoping Plan

On December 24, 2017, CARB adopted the Final 2017 Climate Change Scoping Plan Update (Scoping Plan) to address the 2030 interim target to achieve a 40.0 percent reduction below 1990 levels by 2030, established by SB 32 (CARB 2017c). The CARB Scoping Plan is applicable to state agencies and is not directly applicable to cities/counties and individual projects. Nonetheless, the Scoping Plan has been the primary tool used to develop performance-based and efficiency-based CEQA criteria and GHG reduction targets for climate action planning efforts.

Since adoption of the 2008 Scoping Plan, which was adopted to achieve the GHG reduction goals of Assembly Bill 32 (AB 32), state agencies have adopted programs identified in the plan, and the legislature has passed additional legislation to achieve the GHG reduction targets. Statewide strategies to reduce GHG emissions include the Low Carbon Fuel Standard, California Appliance Energy Efficiency regulations, California

Renewable Energy Portfolio standard, changes in the Corporate Average Fuel Economy standards, and other early action measures as necessary to ensure the state is on target to achieve the GHG emissions reduction goals of AB 32 and SB 32. Also, new buildings are required to comply with the latest applicable Building Energy Efficiency Standards and CALGreen. Though measures in the Scoping Plan apply to state agencies and not the proposed project, the project's GHG emissions would be reduced by statewide compliance with measures that have been adopted since AB 32 and SB 32 were adopted. Therefore, the proposed project would not obstruct implementation of the CARB Scoping Plan, and impacts would be less than significant.

SCAG's Regional Transportation Plan/Sustainable Communities Strategy

SCAG adopted the 2020-2045 RTP/SCS (Connect SoCal) in September 2020. Connect SoCal identifies that land use strategies that focus on new housing and job growth in areas rich with destinations and mobility options are consistent with a land use development pattern that supports and complements the proposed transportation network. The overarching strategy in Connect SoCal is to plan for the southern California region to grow in more compact communities in transit priority areas and priority growth areas; provide neighborhoods with efficient and plentiful public transit; establish abundant and safe opportunities to walk, bike, and pursue other forms of active transportation; and preserve more of the region's remaining natural lands and farmlands (SCAG 2020). Connect SoCal's transportation projects help more efficiently distribute population, housing, and employment growth, and forecast development is generally consistent with regional-level general plan data to promote active transportation and reduce GHG emissions. The projected regional development, when integrated with the proposed regional transportation network in Connect SoCal, would reduce per-capita GHG emissions related to vehicular travel and achieve the GHG reduction per capita targets for the SCAG region.

The Connect SoCal Plan does not require that local general plans, specific plans, or zoning be consistent with the SCS, but provides incentives for consistency to governments and developers. The proposed project is a residential development project that would provide new single-family and multifamily housing on an infill site that is served by transit, which would contribute to reducing the VMT per capita between residential and service needs. Therefore, the proposed project would not interfere with SCAG's ability to implement the regional strategies outlined in Connect SoCal, and impacts would be less than significant.\

3.9 HAZARDS AND HAZARDOUS MATERIALS

The analysis in this section is based in part on the following technical study:

- *Phase I Environmental Site Assessment and Limited Subsurface Assessment,* Stantec, October 12, 2021 (Appendix F)

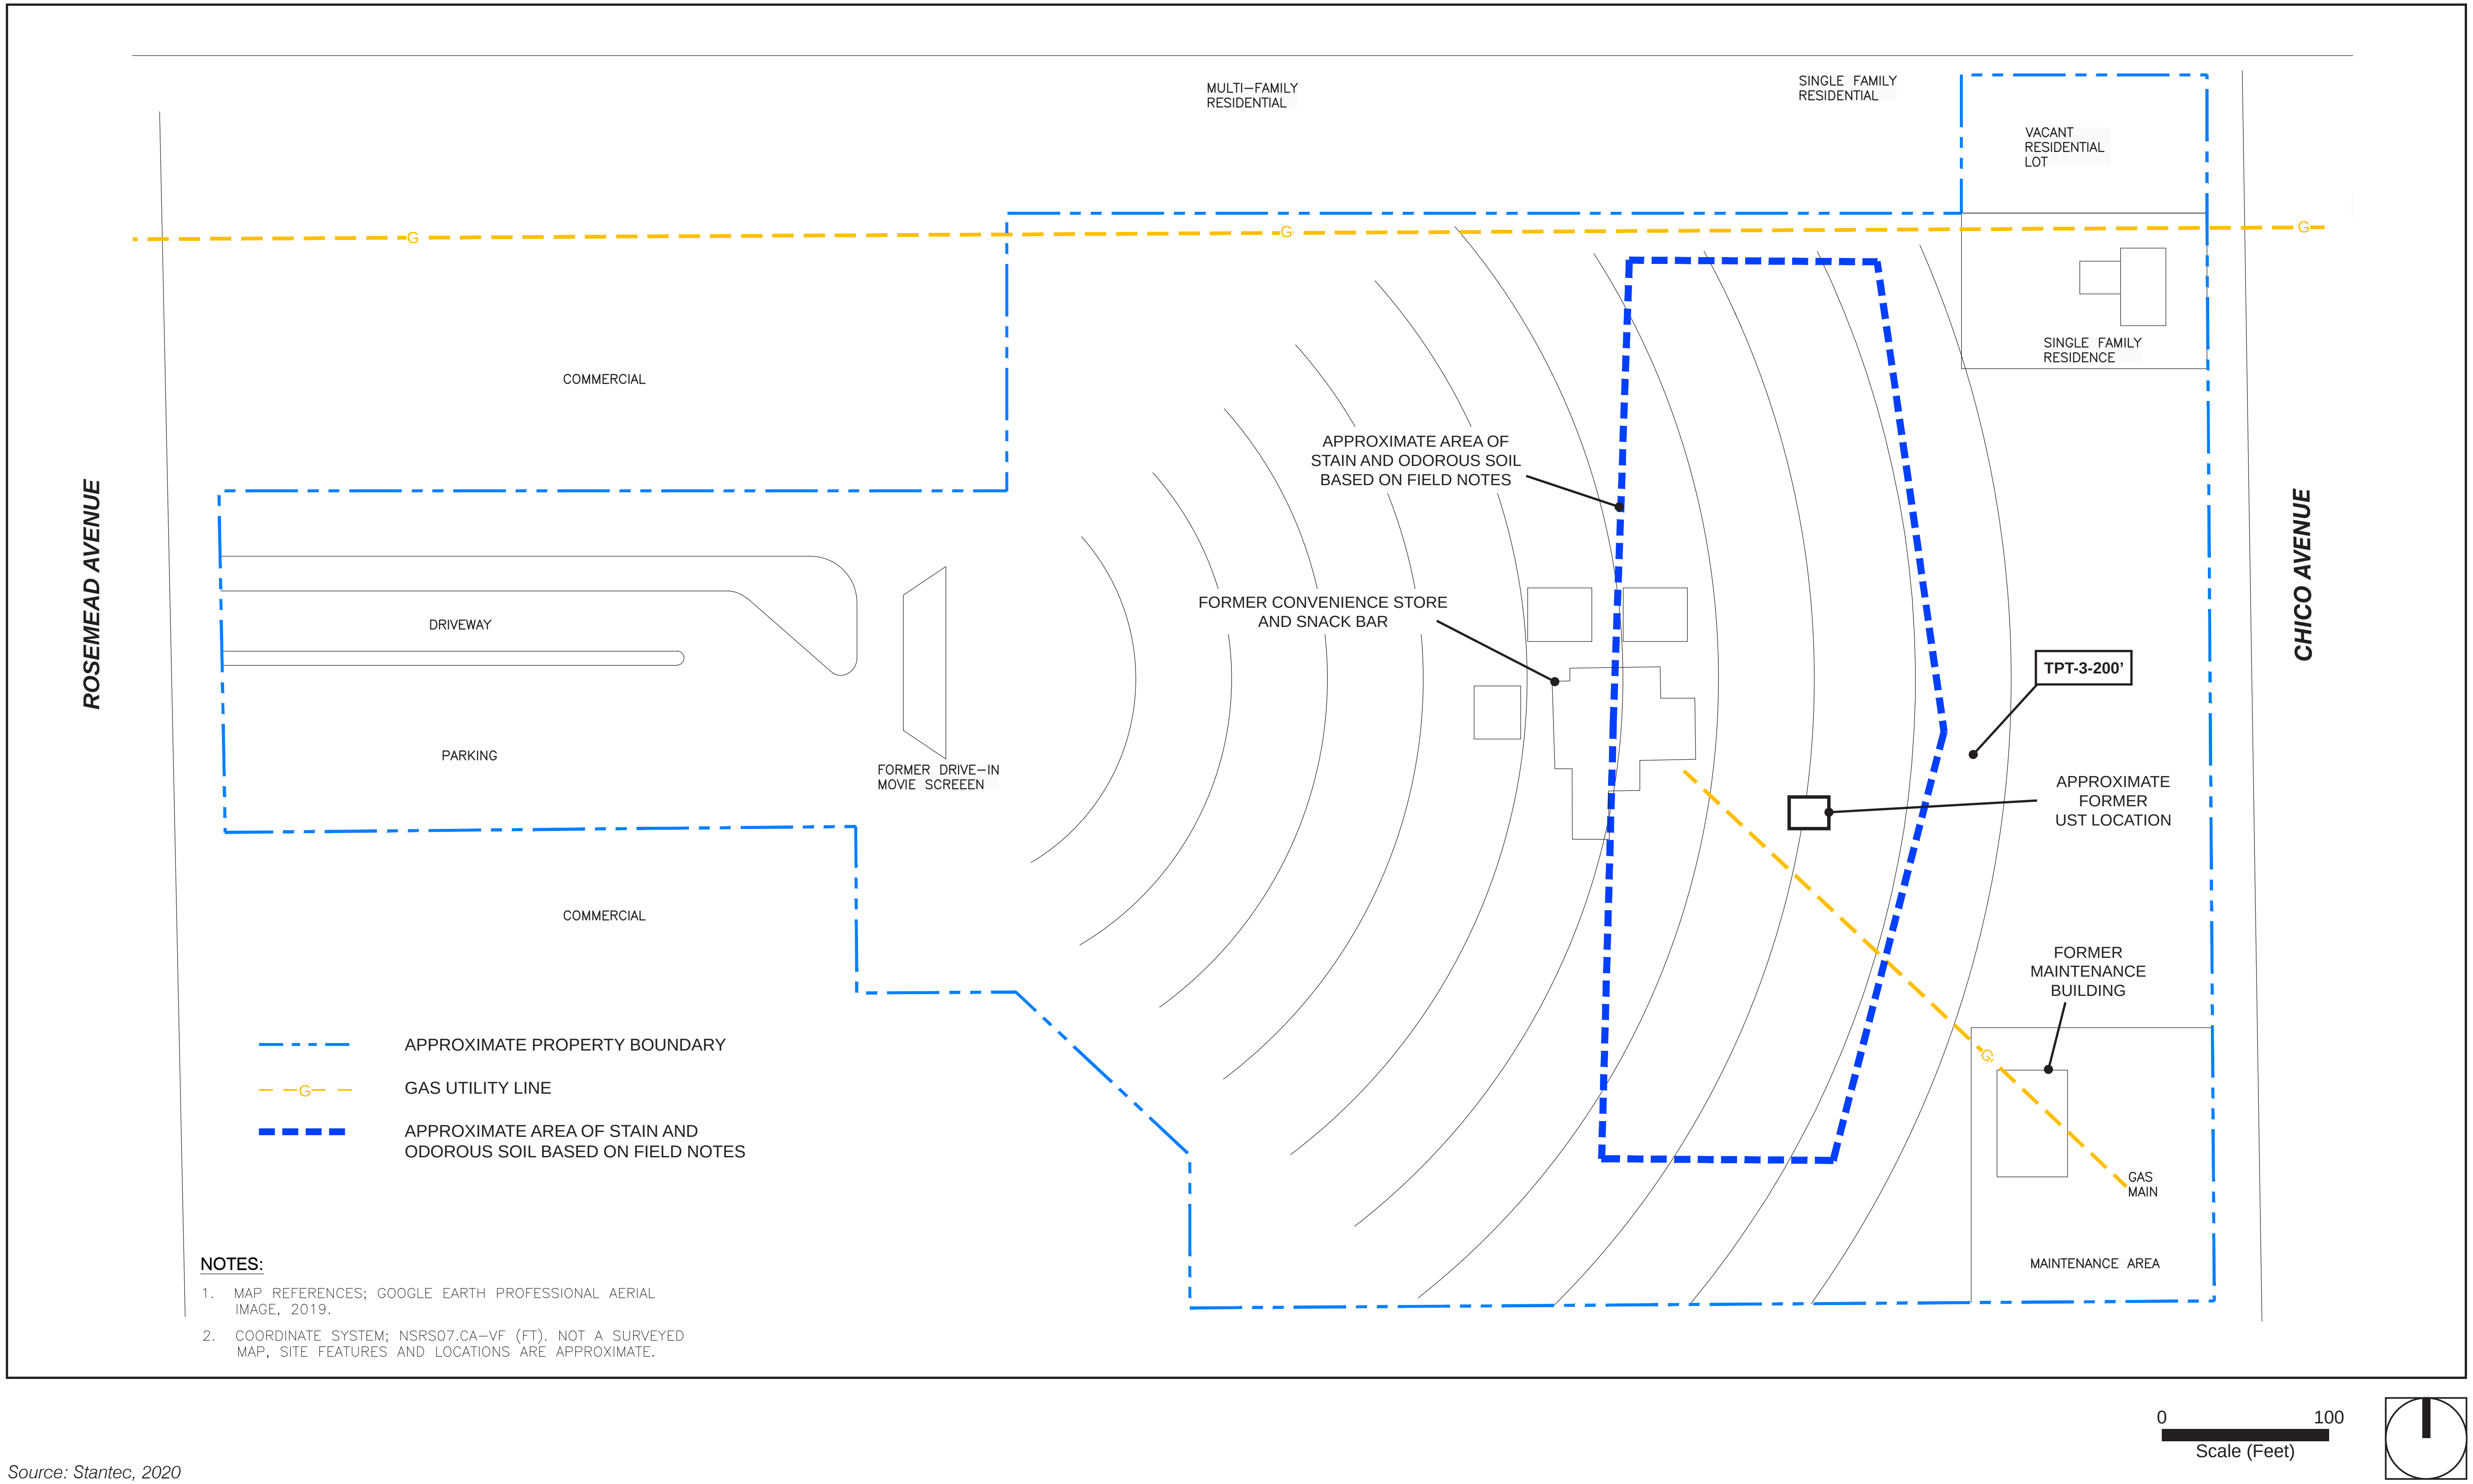
Historic and Current Site Conditions

As shown in Figure 3, *Aerial Photograph*, the project site is paved and vacant except for a structure at the northeast corner of the site. Prior to COVID-19, the site was used on weekends for swap meets. The project site was historically used as agricultural land dating back to 1928. By 1938 a dairy appeared to have been developed on the western portion of the site, and residences were developed on the eastern portion. By 1952 the western

3. Environmental Analysis

portion of the site was redeveloped with a drive-in theater, and by 1972 the eastern portion of the site was redeveloped with two commercial structures and two large parking lots. By 1989 two of the three residences at the site were demolished, and in 2002 the screen of the drive-in theater was removed. In March 2021, the convenience store, snack shop, maintenance building and asphalted areas associated with the drive-in theater were demolished (see Figure 14, *Approximate Area of Stained and Odorous Soils*).

Methane Investigation



In August and September 2015, Hillmann Consulting conducted subsurface investigations, which included the installation of 15 soil vapor probes across the project site. Results of this subsurface assessment detected elevated concentrations of methane in the east-central portion of the site. Hillmann detected elevated concentrations of methane at several locations, with the maximum concentration detected at 620,000 parts per million by volume (ppmv). The source of the elevated methane was not determined during this assessment, and the concentrations of methane indicated a risk for accumulation under any proposed buildings.

In June 2018 Fulcrum Resources Environmental (FRE) further investigated the presence of methane on the property. FRE reported concentrations of methane ranging from less than 10 to a peak level of 235,000 ppmv in the eastern portion of the site. The elevated concentration of methane detected in the subsurface appeared to be near a gas pipeline leading from the maintenance building to the snack shop (see Figure 14, *Approximate Area of Stained and Odorous Soils*). Following the June 2018 investigation, SoCalGas closed and locked out the gas pipeline valve at the maintenance building, terminating gas service to the snack shop.

Stantec completed a Phase I Environmental Site Assessment (ESA) and limited subsurface assessment between July 16 and 24, 2020, to further assess possible methane contamination on the project site. Upon confirmation that the SoCalGas service line was still closed and locked out since 2018, Stantec installed soil vapor probes at six locations near the gas pipeline. The methane concentrations in these probes ranged from 7,000 ppmv to 66,000 ppmv. The reported concentrations showed a decrease since detection by Hillmann in 2015 and FRE in 2018. However, the concentrations detected by Stantec were still a concern to site development for residential purposes. No methane concentrations were detected in the western, southeast, or northeast parts of the site. The area with elevated methane in the soil appeared to be limited to the east-central area, centered between the former snack bar, the former maintenance building, and the northeast corner of the property.

At the completion of demolition activities in March 2021, Stantec installed soil vapor probes throughout the east-central area to evaluate the remaining methane concentrations at the site. Over the span of four months, between March and July 2021, methane concentrations decreased from a high of 55,000 ppmv to less than the reporting limit in all post-demolition soil vapor probes across the east-central area of the property. Methane concentrations experienced a decreasing trend after demolition of the asphalt cover and a three-inch-thick concrete layer two to three feet below ground surface (bgs). Based on the results of a combustible gas survey completed at the east-central area in July 2021 and the prior methane readings in the soil vapor probes in the remaining areas of the property, no further assessment regarding methane would be required.

Figure 14 - Approximate Area of Stained and Odorous Soils

Source: Stantec, 2020

3. Environmental Analysis

This page intentionally left blank.

Underground Storage Tank

On March 16, 2021, during the removal of the three-inch-thick concrete layer from the east-central area of the property an abandoned underground storage tank (UST) was discovered northeast of the natural gas line (see Figure 14, *Approximate Area of Stained and Odorous Soils*). Soil samples were collected at both ends of the UST and analyzed for total petroleum hydrocarbon (TPH) and volatile organic compounds (VOC). No TPHs were detected, and trace amounts of VOCs were reported. The reported VOCs were orders of magnitude below their corresponding residential screening limits (RSL). Given that the UST was completely empty, and the recent soil sample result collected directly below the tank indicated no release had occurred that exceeded current cleanup requirements, the City of South El Monte approved removal of the UST under the existing demolition permit on April 19, 2021. No additional investigation or assessment pertaining to the UST was required by the City of South El Monte.

Total Petroleum Hydrocarbons, Metals, and Volatile Organic Compounds in Soils

Hillman's subsurface investigation included 26 soil borings on the project site. No significant concentrations of petroleum hydrocarbons were detected in the soil matrix samples and, other than arsenic, concentrations of metals in soil appear to represent expected background levels. Although arsenic was detected at a concentration of 8.2 milligrams per kilogram (mg/kg), this is below the generally accepted statistically derived background for arsenic (12 mg/kg) accepted by the California Department of Toxic Substances Control (DTSC) for school sites. Therefore, metals and total petroleum hydrocarbons were not identified as contaminants of concern.

In July 2020, trenching and test pit activities were performed by Stantec in the east-central area of the property where the natural gas line was reported and where areas of visibly stained and odorous soil were present (see Figure 14, *Approximate Area of Stained and Odorous Soils*). Soil samples were analyzed for TPHs and VOCs. No detection of TPH as gasoline or VOCs were detected above the laboratory reporting limits, with the exception of one de minimus area with TPH as diesel and oil slightly above the environmental screening level for residential land use in soil sample TPT-3-200' (see Figure 14, *Approximate Area of Stained and Odorous Soils*).

Historical Agricultural Use

Soil samples on site were analyzed by Stantec for organochlorine pesticides (OCP) that could have been used when the site operated as agricultural land. OCPs were detected at minor concentrations that are below their respective RSLs. Additionally, all detected metal concentrations were within typical naturally occurring California background concentration ranges. Based on the composite soil samples results, historical agricultural use would not represent an environmental concern, and no further investigation is warranted related to this issue.

Groundwater Superfund Plume and Offsite Environmental Concerns

The project site lies within the San Gabriel Valley Regional Groundwater Superfund plume. The groundwater in this area is contaminated with elevated levels of tetrachloroethene (PCE), trichloroethene (TCE), carbon tetrachloride (CTC), and other VOCs from multiple point sources in the San Gabriel Valley. Because groundwater at the project site was reported at 53 feet bgs, Stantec analyzed soil vapor samples for VOCs.

3. Environmental Analysis

Minor concentrations of VOCs were detected, including TCE and PCE concentrations, below DTSC's RSL for soil vapor and with an attenuation factor of 0.001.

Additionally, Stantec assessed data presented in the environmental agency database search report to evaluate adjacent and nearby potential recognized environmental conditions (REC).[5] Based on this evaluation, the most likely RECs near the proposed site are shown in Table 8, *Nearby Potential Recognized Environmental Conditions*. However, the VOC results from the on-site investigation showed that none of these sites have an impact on the proposed project.

Table 8 Nearby Potential Recognized Environmental Conditions

Facility Name	Distance/Direction from the Project Site	Potential Recognized Environmental Conditions
Bright-Way Laundry 2622 Chico Avenue El Monte, CA 91733	Approximately 265 feet/ northeast	The former dry cleaners at this site included a registered waste UST that is currently out of service. A prior release from this UST could represent an environmental concern if the land use on the project site were to change to residential. However, the low levels of detected VOC concentrations in soil vapor show that there are no impacts from this UST.
Eldon Drapery Cleaners 2461 Chico Avenue El Monte, CA 91733	Approximately 100 feet/ southeast	No releases have been reported for this facility. However, the dry cleaners could be an environmental concern due to the potential for unknown releases to have occurred that would present a potential vapor migration issue at the proposed site. The low levels of detected VOC concentrations in soil vapor at the project site show that there are no impacts from this facility.
Champ Corp. 2500 Rosemead Blvd El Monte, CA 91733	Approximately 315 feet/ west-southwest	This site is listed for a release of gasoline to soil. No information regarding remedial activities is provided. However, the Regional Water Quality Control Board (RWQCB) issued closure for this release on June 18, 1996. Although the impact appears to be to the soil only, no soil vapor data or samples have been collected along the property boundary. Given the low levels of detected VOC concentrations in soil vapor at the project site, there are no impacts from this facility.

[5] A recognized environmental condition (an REC) is "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

3. Environmental Analysis

Table 8 Nearby Potential Recognized Environmental Conditions

Facility Name	Distance/Direction from the Project Site	Potential Recognized Environmental Conditions
General Enameling Co. 2463 Chico Ave American General Bus 2430 Chico Avenue Raypack, Inc 2416 Chico Avenue Monterey Caskett Co. 2404 Chico Ave M&T 2500 Rosemead Blvd Hooter Bros Enamelin 2460 Rosemead Blvd Silver Streak Traile 2319 Chico Ave Hyde Engineering 2428 Rosemead Blvd	< 1/8 mile southeast and southwest	Each of the eight facilities listed have reported a release of chlorinated solvents that affected groundwater below their respective properties. Of the eight listings, four have received case closure from the RWQCB. Two of the listed facilities, M&T and Hooter Bros Enamelin are located adjacent to the southwest of the property. The remaining facilities are located further to the southwest and southeast but are at a density such that combined effects of these releases could present a vapor migration potential. Stantec initially identified this facility as an REC due to the potential for elevated soil vapor concentrations to exist beneath the project site. That issue no longer appears to be a concern, given the low levels of detected VOC concentrations in soil vapor at the property.

Source: Stantec, 2021.

Would the project:

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			X	
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?		X		
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			X	

3. Environmental Analysis

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code § 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				X
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?			X	
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			X	
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?			X	

a) Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?

Less Than Significant Impact. Project construction would require small amounts of hazardous materials, including fuels, greases and other lubricants, and coatings such as paint. The handling, use, transport, and disposal of hazardous materials during the construction phase of the project would comply with existing regulations of several agencies—the EPA, the Los Angeles County Environmental Health Division, Occupational Safety and Health Administration, California Division of Occupational Safety and Health, and the US Department of Transportation.

Based on the age of the existing structure onsite, it is possible that asbestos-containing materials and lead-based paint are present in the building's materials.. Project-related demolition activities that have the potential to expose construction workers and/or the public to asbestos or lead would be conducted in accordance with applicable regulations, which would ensure impacts would be less than significant, including, but not limited to:

- South Coast Air Quality Management District's Rule 1403
- California Health and Safety Code (Section 39650 et seq.)
- California Code of Regulations (Title 8, Section 1529)
- California Occupational Safety and Health Administration Regulations (California Code of Regulations, Title 8, Section 1529 [Asbestos] and Section 1532.1 [Lead])
- Code of Federal Regulations (Title 40, Part 61 [asbestos], Title 40, Part 763 [asbestos], and Title 29, Part 1926 [asbestos and lead])

Compliance with these regulations would mitigate the potential of hazardous materials that may be present in the existing structure.

The proposed project would operate as residential uses. Project maintenance may require the use of cleaners, solvents, paints, and other custodial products that are potentially hazardous. These materials would be used in relatively small quantities, clearly labeled, and stored in compliance with state and federal requirements. Moreover, the residents living in the proposed project may also use such products. With the exercise of normal safety practices, the proposed project would not create substantial hazards to the public or the environment and impacts would be less than significant.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less Than Significant Impact With Mitigation Incorporated. During demolition activities in March 2021, an abandoned UST was discovered northeast of the natural gas line. Even though no additional investigation or assessment was required by the City of South El Monte, there is a possibility to encounter another UST on-site during the construction phase, which could create an accidental release of hazardous material that would create a hazard to construction workers and the environment. However, with the implementation of mitigation measure HAZ-1, impacts would be reduced to a less than significant.

Additionally, visibly stained and odorous soil is present on site as shown in Figure 14, *Approximate Area of Stained and Odorous Soils*. TPH as diesel and oil were detected above the environmental screening level for residential land use in one sample collected from this area. Potential impacts to construction workers and the environment could occur as a result of excavation and handling of these on-site soils. Additionally, future residents could be impacted by soils containing residual levels of TPH that are not properly identified, monitored, and managed. However, with the implementation of Mitigation Measure HAZ-1, impacts would be reduced to a less than significant level.

The project site also lies within the San Gabriel Valley Regional Groundwater Superfund plume and could be contaminated with VOCs from past use of the land. Although soil vapor samples from the project site showed minor concentrations of VOCs, elevated soil vapor concentrations could still impact residential units on the site; Mitigation Measure HAZ-2 would reduce impacts to less than significant.

Furthermore, strict adherence to all emergency response plan requirements by the Los Angeles County Fire Department would be required throughout the duration of the project. In the event of a hazardous materials spill of greater amount or toxicity than on-site personnel could safely contain and clean up, assistance would be requested from the LACFD hazmat team.

Therefore, compliance with applicable laws and regulations and mitigation measures HAZ-1 and HAZ 2 would ensure that impacts would be less than significant.

Mitigation Measures

HAZ-1 Prior to the issuance of a grading permit, the project applicant shall retain a qualified environmental consultant to prepare a Soil Management Plan (SMP). The SMP shall be

3. Environmental Analysis

distributed to all grading contractors and must be kept on site during grading activities. The SMP shall include the following:

- Procedures and protocols should another underground storage tank (UST) be encountered during grading. Requirements detailed in the SMP shall be in accordance with the requirements of the Los Angeles County Public Works' UST Program.
- Procedures and protocols for onsite management of soils to ensure that soils containing residual levels of Total Petroleum Hydrocarbons (TPH) are properly identified, monitored, and managed on-site. Requirements shall include the following:
  - A certified hazardous waste hauler shall remove all subsurface materials identified in the Phase I Environmental Assessment Report as being contaminated with TPH above the Environmental Screening Levels (ESLs) for residential land. In addition, sampling of soil shall be conducted during excavation to ensure that all TPH impacted soils are removed, and that ESLs for residential uses are not exceeded. Excavation confirmation samples should be collected from the bottom and sidewalls of each excavation at a frequency of one sample every 25 feet. Confirmation soil samples should be collected into laboratory supplied clean, glass jars directly from the bottom and sidewall or from the excavator bucket. Samples should be sealed, labeled, and placed on ice for transportation under proper chain-of-custody to a California state-certified laboratory for analysis of TPH by USEPA Methods 8015M. Excavated materials shall be transported per California Hazardous Waste Regulations to a landfill permitted by the State to accept hazardous materials.
  - The SMP shall include a Health and Safety Plan (HSP) that addresses potential safety and health hazards and includes the requirements and procedures for employee protection; each contractor shall be required to have their own HSP tailored to their particular trade that addresses the general project safety requirements. The HSP shall also outline proper soil handling procedures and health and safety requirements to minimize worker and public exposure to hazardous materials during construction.
  - The SMP shall be prepared and executed in accordance with South Coast Air Quality Management District (SCAQMD) Rule 1166, Volatile Organic Compound (VOCs) Emissions from Decontamination of Soil. The SMP shall require the timely testing and sampling of soils so that contaminated soils can be separated from inert soils for proper disposal. The SMP shall specify the testing parameters and sampling frequency. Anticipated testing includes screening excavated soils for VOS. During excavation, Rule 1166 requires that soils identified as contaminated shall be sprayed with water or another approved vapor suppressant or covered with sheeting during periods of inactivity of greater than an hour, to prevent contaminated soils from becoming airborne. Under Rule 1166, contaminated soils shall be transported from the project site by a licensed transporter and disposed of at a licensed storage/treatment facility to prevent contaminated soils from becoming airborne or otherwise released into the environment.

- All SMP measures shall be printed and distributed to all grading contractors and must be kept on site during grading activities prior to beginning any grading activities.

HAZ-2 Because on-site soils could be contaminated with residual VOCs from past use of the land, installation of a passive soil vapor barrier shall be required. Prior to the issuance of a building permit, the project applicant shall retain a qualified environmental consultant to design a passive vapor barrier that further mitigates vapor intrusion risk from residual VOC impacts at the site. The vapor barrier design shall be distributed to all construction contractors and must be kept on site during construction activities. The passive vapor barrier design shall include the following:

- A multi-layer composite membrane that extends continuously beneath the floor slab of each building and is sealed against all utilities and other penetrations.
- The associated ventilation system beneath the foundation of each building.
- The passive ventilation system which shall include perforated collection vents embedded in a layer of sand beneath the multi-layer composite membrane. The collection vents shall connect to non-perforated vent riser that extent outlets at the roof of the building.
- For each soil boring, soil and soil gas samples shall be collected at depths of 5 and 10 feet below ground surface (bgs).
- A land use covenant e recorded on title to the site to prohibit any disturbance of the vapor barriers.

Upon completion of Mitigation Measure HAZ-2 and prior to the issuance of a Permit to Occupy, the City shall require a report with a no further action determination be submitted from a qualified environmental consultant. This can be determined in the following way:

- Upon completion of Mitigation Measure HAZ-2, a Remedial Action Completion Report (RACR) by a qualified environmental engineer is prepared documenting that all of the remedial measures in Mitigation Measure HAZ-2 have been successfully completed.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Less Than Significant Impact With Mitigation Incorporated. The proposed project is within a quarter mile of Potrero Elementary School. Operation of the proposed project would not result in the release of hazardous emissions. No significant hazardous materials, substances, or wastes would be transported, used, or disposed of in conjunction with the proposed project's operation. The on-site use of hazardous materials at the project site would be restricted to cleaning solvents and paints used by facilities maintenance staff and cleaning solvents used by residents of the proposed project. The materials used by facilities maintenance staff would be used in small quantities and stored in compliance with state and federal requirements.

However, potential VOC hazards associated with the project site could impact students and staff at the Potrero Elementary School. Mitigation measure HAZ-2 would address residual VOCs on the site and outline how risks would be managed during site redevelopment if VOCs exceed relevant screening levels. Therefore, with the implementation of these mitigation measures, impacts would be less than significant.

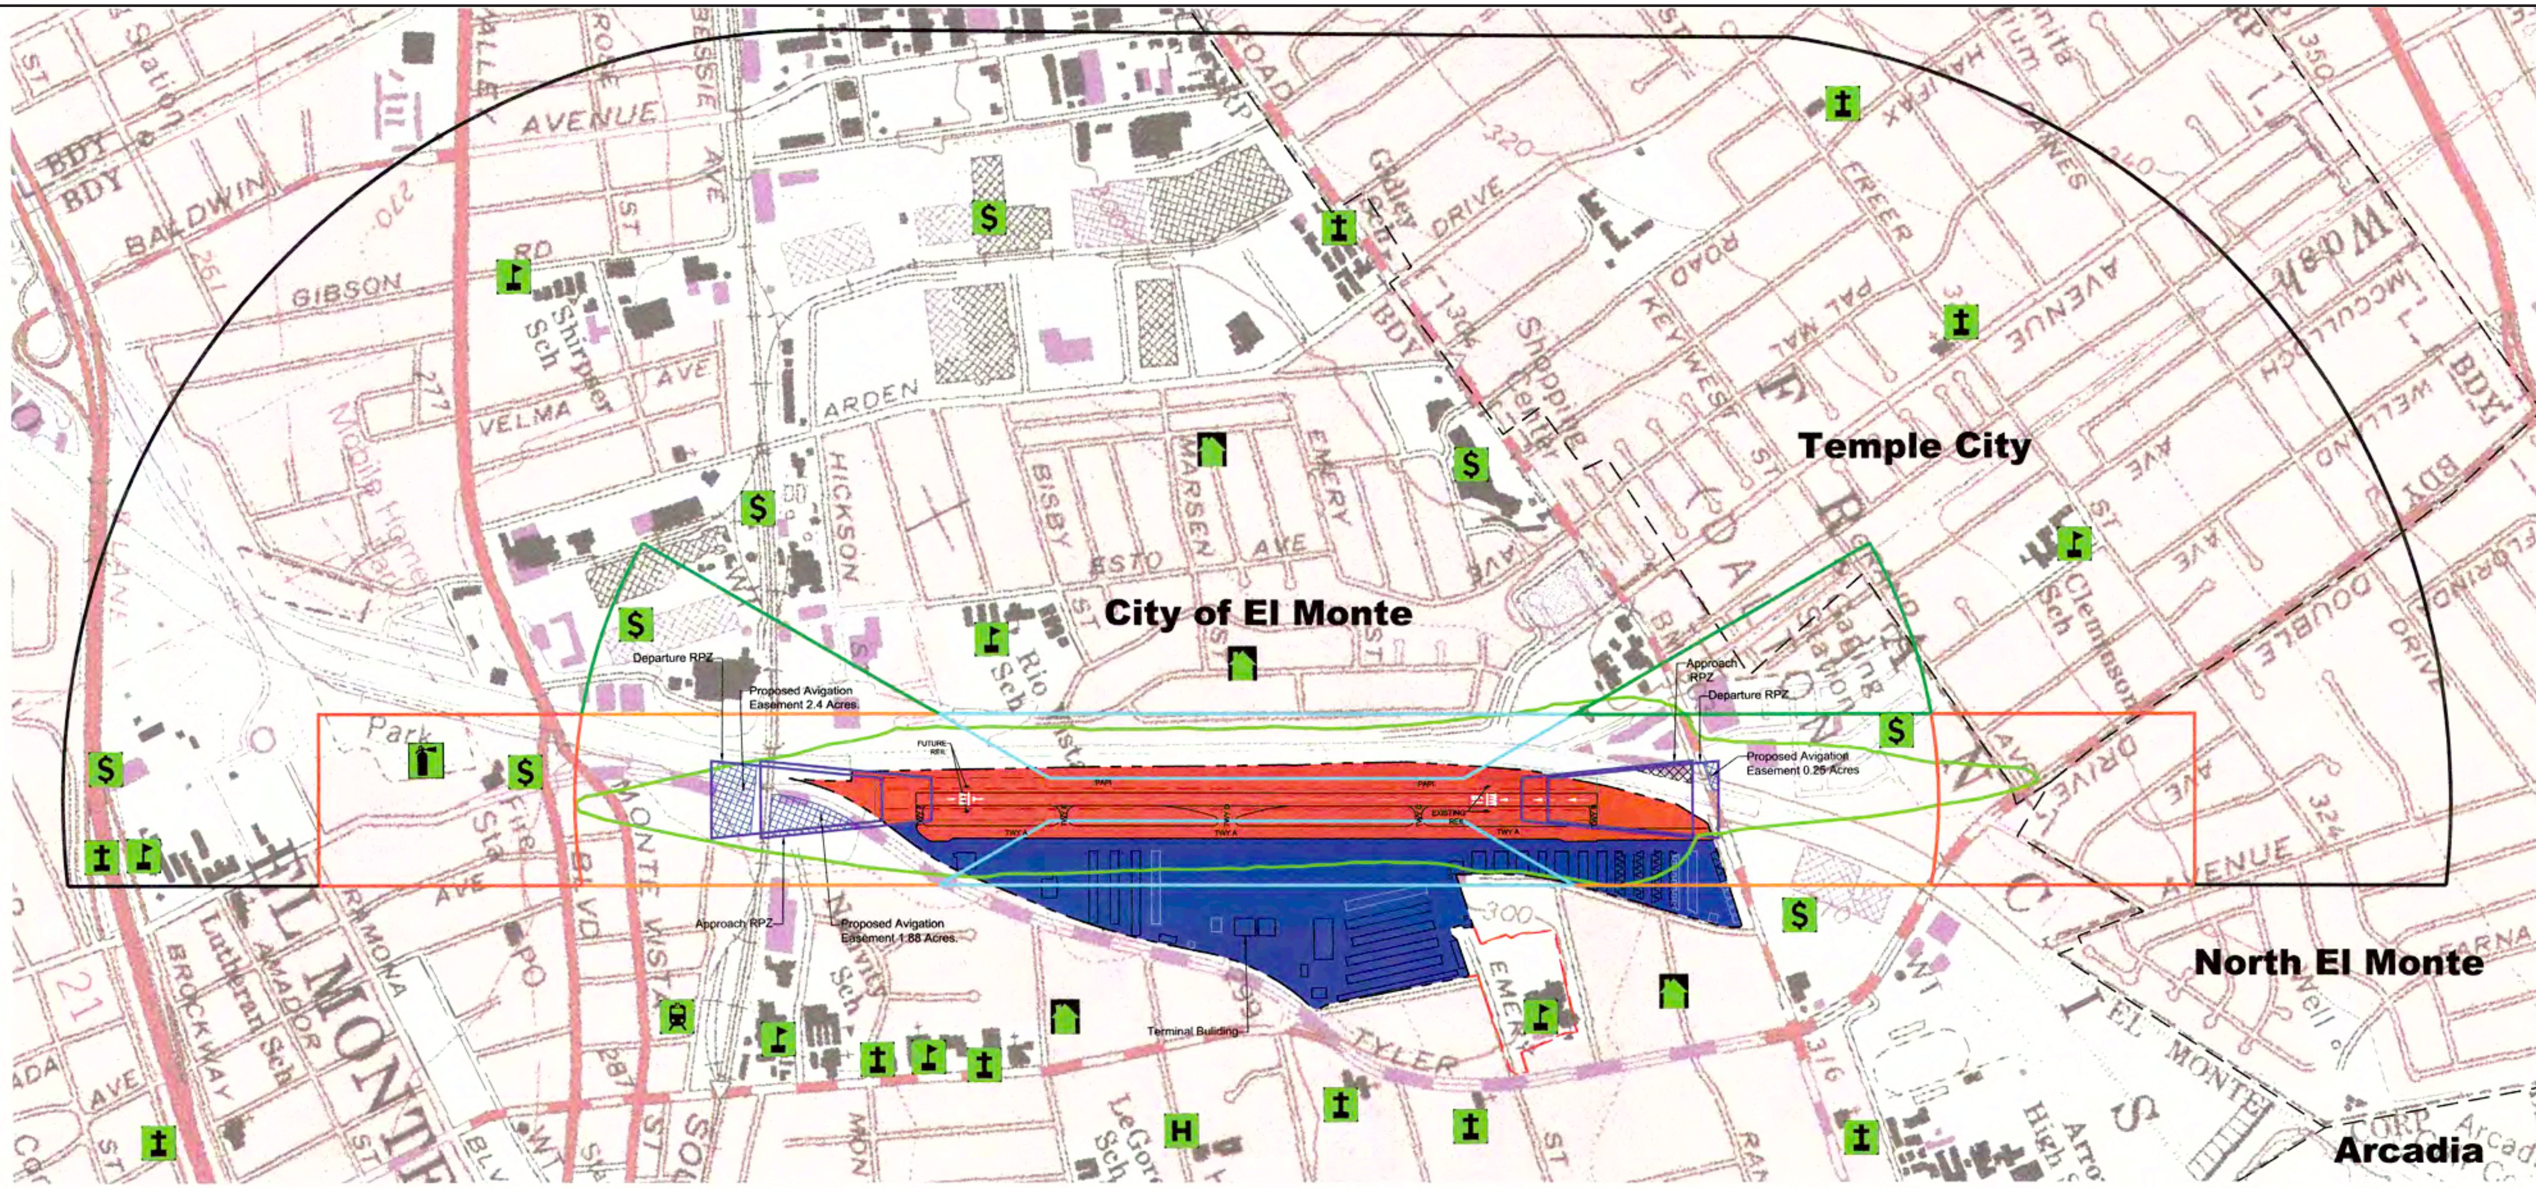
3. Environmental Analysis

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No Impact. A regulatory database record search was conducted as part of the Phase I Environmental Assessment report prepared for the proposed project (see Appendix F) in accordance with Government code Section 65962.5. The project site was not listed on any of the regulatory databases searched. Therefore, No impact would occur and no mitigation measures are necessary.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles or a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact. The San Gabriel Valley Airport (formerly known as the El Monte Airport) in the City of El Monte is approximately 2 miles northeast of the project site. The El Monte Airport Master Plan Report shows the airport's 60 CNEL noise contour does not extend to the project site. Additionally, Figure 15, *San Gabriel Valley Airport Safety Zones,* shows that the City of South El Monte is not within the San Grabriel Airport safety hazard zones. Workers or people residing in the project area would not be exposed to excessive airport noise or safety hazards. Therefore, no impact would occur.



f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact. The proposed project would not conflict with adopted emergency response or evacuation plans. The surrounding roadways would continue to provide access to the project site and surrounding properties during construction and post-construction. The existing driveway at Rosemead Boulevard would not be altered, and a new driveway would be constructed on Chico Street that would be designed to meet standards and specifications to allow ambulance and fire vehicle access. The County of Los Angeles Fire Department reviewed the project plans and recommended clearance with the incorporation of conditions of approval which pertain to access and water system requirements (see Appendix I). Additionally, the project applicant would include a knox box onsite for emergency access. With the incorporation of the Fire Department's conditions of approval and project features, the proposed project would not result in inadequate emergency access, and impacts to adopted emergency response and evacuation plans are less than significant.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Less Than Significant Impact. According to the California Department of Forestry and Fire Protection's Fire and Resource Assessment Program (CAL FIRE FRAP), the project area is not in a Very High Fire Hazard Severity Zone (FHSZ) (CAL FIRE 2021). The site is in a built-out portion of the city. Therefore, impacts of exposing project occupants to pollutant concentrations from or exacerbating a wildfire would be less than significant.

Figure 15 - San Gabriel Valley Airport Safety Zones

NOTES:

1. According to LA County Zoning Maps the land located adjacent to the airport property are classified as "Residential / Commercial".
2. Existing acreage shown.
3. Source of Safety Zone data: California Airport Land Use Planning Handbook, October 2011.
4. Basemap Image: Digital Raster Graph Mosaic of Los Angeles County, California, U.S. Department of Agriculture, 3/25/2002.
5. Basic Caltrans safety zones were applied, except as noted in Note 6. Further modifications may be required by the land use commission as part of a land use study.
6. A single-sided traffic pattern at San Gabriel Valley Airport was applied, which affected Zones 3 and 6. Additionally, both approach and departure RPZs are included in Caltrans Safety Zone 1 (RPZ).

3. Environmental Analysis

This page intentionally left blank.

3.10 HYDROLOGY AND WATER QUALITY

The analysis in this section is based partly on the following technical study:

- *Preliminary Hydrology and LID Report*, Forma, March 1, 2021 (Appendix G)

Would the project:

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?			X	
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?			X	
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:			X	
i) result in a substantial erosion or siltation on- or off-site;			X	
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;			X	
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or			X	
iv) impede or redirect flood flows?			X	
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?			X	
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?				X

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Less Than Significant Impact. The project site is in the Rio Hondo Watershed, a 142-square-mile subwatershed of the Los Angeles River watershed (CDFW 2021). The upper reaches of the watershed start at the steep terrain of the San Gabriel Mountains, much of which lies within the Angeles National Forest. This natural undeveloped landscape changes below the foothills, and the nature of the watershed is transformed to an urban and largely built-out landscape. This built area includes only a few remaining areas of open space and isolated patches of natural habitat (Arroyo Seco Foundation 2021).

3. Environmental Analysis

Water quality in South El Monte is regulated by the Los Angeles Regional Water Quality Control Board (RWQCB) and its water quality control plan (Basin Plan), which contains water quality standards and identifies beneficial uses (wildlife habitat, agricultural supply, fishing, etc.) for receiving waters along with water quality criteria and standards necessary to support these uses consistent with federal and state water quality laws.

Impacts to water quality of receiving waters generally range over three different phases of a development project:

- During the earthwork and construction phase, when the potential for erosion, siltation, and sedimentation would be the greatest.
- Following construction and before the establishment of ground cover, when the erosion potential may remain relatively high.
- Following project completion, when impacts related to sedimentation would decrease markedly, but those associated with urban runoff would increase.

Following is a discussion of the potential water quality impacts resulting from urban runoff that would be generated during the construction and operational phases of the proposed project.

Project Construction

Construction-related runoff pollutants are typically generated from waste and hazardous materials handling or storage areas, outdoor work areas, material storage areas, and general maintenance areas (e.g., vehicle or equipment fueling and maintenance, including washing). The proposed project's construction phase may cause deterioration in the quality of downstream receiving waters if construction-related sediments or pollutants wash into the existing storm drain system and facilities in the area.

Construction-related activities that are primarily responsible for sediment releases are related to exposing previously stabilized soils to potential mobilization by rainfall/runoff and wind. Such activities include removing vegetation from the site, grading the site, and trenching for infrastructure improvements. Environmental factors that affect erosion include topographic, soil, and rainfall characteristics. Non-sediment-related pollutants that are also of concern during construction relate to non-stormwater flows and generally include construction materials (e.g., paint and stucco); chemicals, liquid products, and petroleum products used in building construction or the maintenance of heavy equipment; and concrete and related cutting or curing residues. Construction-related activities of the proposed project would generate pollutants that could adversely affect the water quality of downstream receiving waters if appropriate and effective stormwater and non-stormwater management measures are not used to keep pollutants out of and remove pollutants from urban runoff.

Construction projects of one acre or more are regulated under the Statewide Construction General Permit (CGP), Order No. 2012-0006-DWQ, issued by the State Water Resources Control Board in 2012. Projects obtain coverage by developing and implementing a Stormwater Pollution Prevention Plan (SWPPP), estimating sediment risk from construction activities to receiving waters, and specifying BMPs that would be used by the

project to minimize pollution of stormwater. Categories of BMPs used in SWPPPs are described in Table 9, *Construction Best Management Practices*.

Table 9 Construction Best Management Practices

Category	Purpose	Examples
Erosion Controls	Protects the soil surface and prevents soil particles from being detached by rainfall, flowing water, or wind.	Scheduling, preserving existing conditions, mulch, soil binders, geotextiles, mats, hydroseeding, earth dikes, swales, velocity dissipating devices, slope drains, streambank stabilization, compost blankets, soil preparation/roughening, and non-vegetative stabilization.
Sediment Controls	Traps soil particles after they have been detached and moved by rain, flowing water, or wind.	Barriers such as silt fences, straw bales, sandbags, fiber rolls, and gravel bag berms; sediment basins; sediment traps; check dams; storm drain inlet protection; compost socks and berms; biofilter bags; manufactured linear sediment controls; and cleaning measures such as street sweeping and vacuuming
Wind Erosion Controls	Minimizes dust nuisances.	Applying water or other dust palliatives to prevent or minimize dust nuisance, reducing soil-moving activities during high winds, and installing erosion control BMPs for temporary wind control.
Tracking Controls	Prevents or reduces the tracking of soil offsite by vehicles	Stabilized construction roadways and construction entrances/exits and entrance/outlet tire wash.
Non-Storm Water Management Controls	Prevents pollution by limiting or reducing potential pollutants at their source or eliminating off-site discharge. Prohibits illicit connections or discharges.	Water conservation practices, BMPs specifying methods for: dewatering operations; temporary stream crossings; clear water diversions; pile driving operations; temporary batch plants; demolition adjacent to water; materials over water; potable water and irrigation; paving and grinding operations; cleaning, fueling, and maintenance of vehicles and equipment; concrete curing; concrete finishing.
Waste Management and Controls (i.e., good housekeeping practices)	Management of materials and wastes to avoid contamination of stormwater.	Proper material delivery and storage and material use, spill prevention and control, stockpile management, contaminated soil management, and management of solid, concrete, sanitary/septic, liquid, and hazardous wastes.

Source: CASQA 2019.

The proposed project's construction contractor would be required to prepare and implement an SWPPP and associated BMPs in compliance with the CGP during grading and construction. The SWPPP would specify BMPs, such as those outlined in Table 9, that the construction contractor would implement to protect water quality by eliminating and/or minimizing stormwater pollution prior to and during grading and construction The SWPPP would also show the placement of those BMPs.

Adherence to the BMPs in the SWPPP would reduce, prevent, minimize, and/or treat pollutants and prevent degradation of downstream receiving waters. BMPs identified in the SWPPP would reduce or avoid contamination of stormwater with sediment and other pollutants such as trash and debris; oil, grease, fuels, and other toxic chemicals; paint, concrete, asphalt, bituminous[6] materials, etc.; and nutrients.

Based on the preceding, water quality and waste-discharge impacts from project grading and construction activities would be less than significant, and no mitigation measures are necessary.

Project Operation

Operational-related activities of the proposed project (e.g., runoff from parking areas, solid waste storage areas, and landscaped areas) would generate pollutants that could adversely affect the water quality of downstream receiving waters if effective measures are not used to keep pollutants out of urban runoff.

Standards governing discharges to stormwater from project operation are in the Municipal Stormwater (MS4) Permit for Los Angeles County under the jurisdiction of the Los Angeles RWQCB, Order No. R4-2012-0175 as amended by WQ 2015-0075. The MS4 was adopted on November 8, 2012 and is in the process of renewal. The County of Los Angeles also issued a Low Impact Development (LID) Standards Manual on developing water quality management plans for projects and selecting BMPs for a project. Additionally, Chapter 8.44 of the municipal code, Stormwater Management and Discharge Control, includes requirements to reduce pollutants in stormwater discharges, regulate illicit connections and illicit discharges, decrease the level of contamination of stormwater and urban runoff in the municipal stormwater system, and control nonstorm-water discharges to the municipal stormwater system.

LID is a stormwater management and land development strategy that combines a hydrologically functional site design with pollution prevention measures to compensate for land development impacts on hydrology and water quality. LID techniques mimic the site predevelopment hydrology by using site design techniques that store, infiltrate, evapotranspire, biofilter, or detain runoff close to its source. Source control BMPs reduce the potential for pollutants to enter runoff and are classified in two categories—structural and nonstructural. Structural source control BMPs have a physical or structural component, such as inlet trash racks, trash bin covers, and an efficient irrigation system, to prevent pollutants from contacting stormwater runoff. Nonstructural source control BMPs are procedures or practices used in project operation, such as stormwater training or trash management and litter control practices.

According to the Los Angeles County LID Manual, the proposed project is a designated priority project defined as a development of a new project equal to one acre or greater of disturbed area and adding more than 10,000 square feet of impervious area. Priority projects must meet the requirements of municipal code Chapter 8.44 through the preparation and submittal of a standard urban stormwater mitigation plan, which shall include the applicable LID requirements in the MS4 permit. Priority projects are required to retain 100 percent of the

[6] Bituminous means resembling or containing bitumen. Bitumen is any of various viscous or solid impure mixtures of hydrocarbons that occur naturally in asphalt, tar, mineral waxes, and so forth and are used as a road surfacing and roofing material.

stormwater quality design volume[7] on-site through infiltration, evapotranspiration, stormwater runoff harvest and use, or a combination of these (LARWQCB 2012).

The proposed project would comply with requirements in the MS4 Permit, the Los Angeles County LID Manual, and the municipal code. Per the City's requirements for priority projects, the project applicant prepared a Preliminary Hydrology and LID Report for City review (Appendix G). The report specifies BMPs that would be implemented to minimize water pollution from the project site during the operational phase. A detailed discussion of how the BMPs were selected is provided in the report and summarized in this section. The final BMPs to be implemented for the proposed project would be determined through the City's review of the Final Hydrology and LID Report.

Proposed drainage subareas A and B are shown in Figure 16, *Developed Condition Hydrology Map*. Proposed subarea B would be parceled off and remain with the current landowner. Proposed subarea A is to be developed into the residential condominiums, with a central LID BMP. Overflow from the proposed BMP would be directed to county storm drain Project No. 7750, Line A. The water quality design volume ($SWQD_v$) and flow rate (Q_{pm}) resulting from the 85th percentile rain event are summarized in Table 10, *Low Impact Development, Stormwater Quality Design Volume and Flow Rates*.

Table 10 Low Impact Development, Stormwater Quality Design Volume and Flow Rates

Subarea	$SWQD_v$ (ft^3)	Q_{pm} (ft^3/s)	Outfall Location
A	27,807	1.56	Project No. 7750, Line A

Source: Forma, Hydrology and LID Report, March 1, 2021.

According to the Los Angeles County LID Manual, infiltration BMPs are considered a first option for a project site when screening potentially feasible LID BMPs. Infiltration BMPs collect stormwater runoff and divert it into permeable soils beneath the site. This effectively reduces pollution, runoff, and flooding and recharges groundwater. Therefore, the Preliminary Hydrology and LID Report proposed a drywell designed using an estimated infiltration rate since initial soil investigations did not include infiltration testing on-site. Runoff would be temporarily detained upstream of the drywell in a proprietary chamber system that serves as a settling basin for silt and debris. The chamber system would pretreat the water before it entered the drywell. The locations of the proposed chamber system and dry well are shown on Figure 16, *Developed Condition Hydrology Map*.[8] The chamber system is in open areas of the site, which would allow the detention volume to be adjusted once infiltration testing has occurred and required detention volume is adjusted based on infiltration. For the drywell, Table 11, *Low Impact Development Dry Well BMP Design Summary,* shows the BMP area and volume required to treat the $SWQD_v$ on-site. The table also includes the BMP area and volume provided. As shown, the proposed drywell is adequately sized.

[7] The design storm, from which the stormwater quality design volume is calculated, is defined as the greater of:
- The 0.75-inch, 24-hour rain event.
- The 85th percentile, 24-hour rain event.

[8] The chamber system is referred to as a detention system on Figure 16.

3. Environmental Analysis

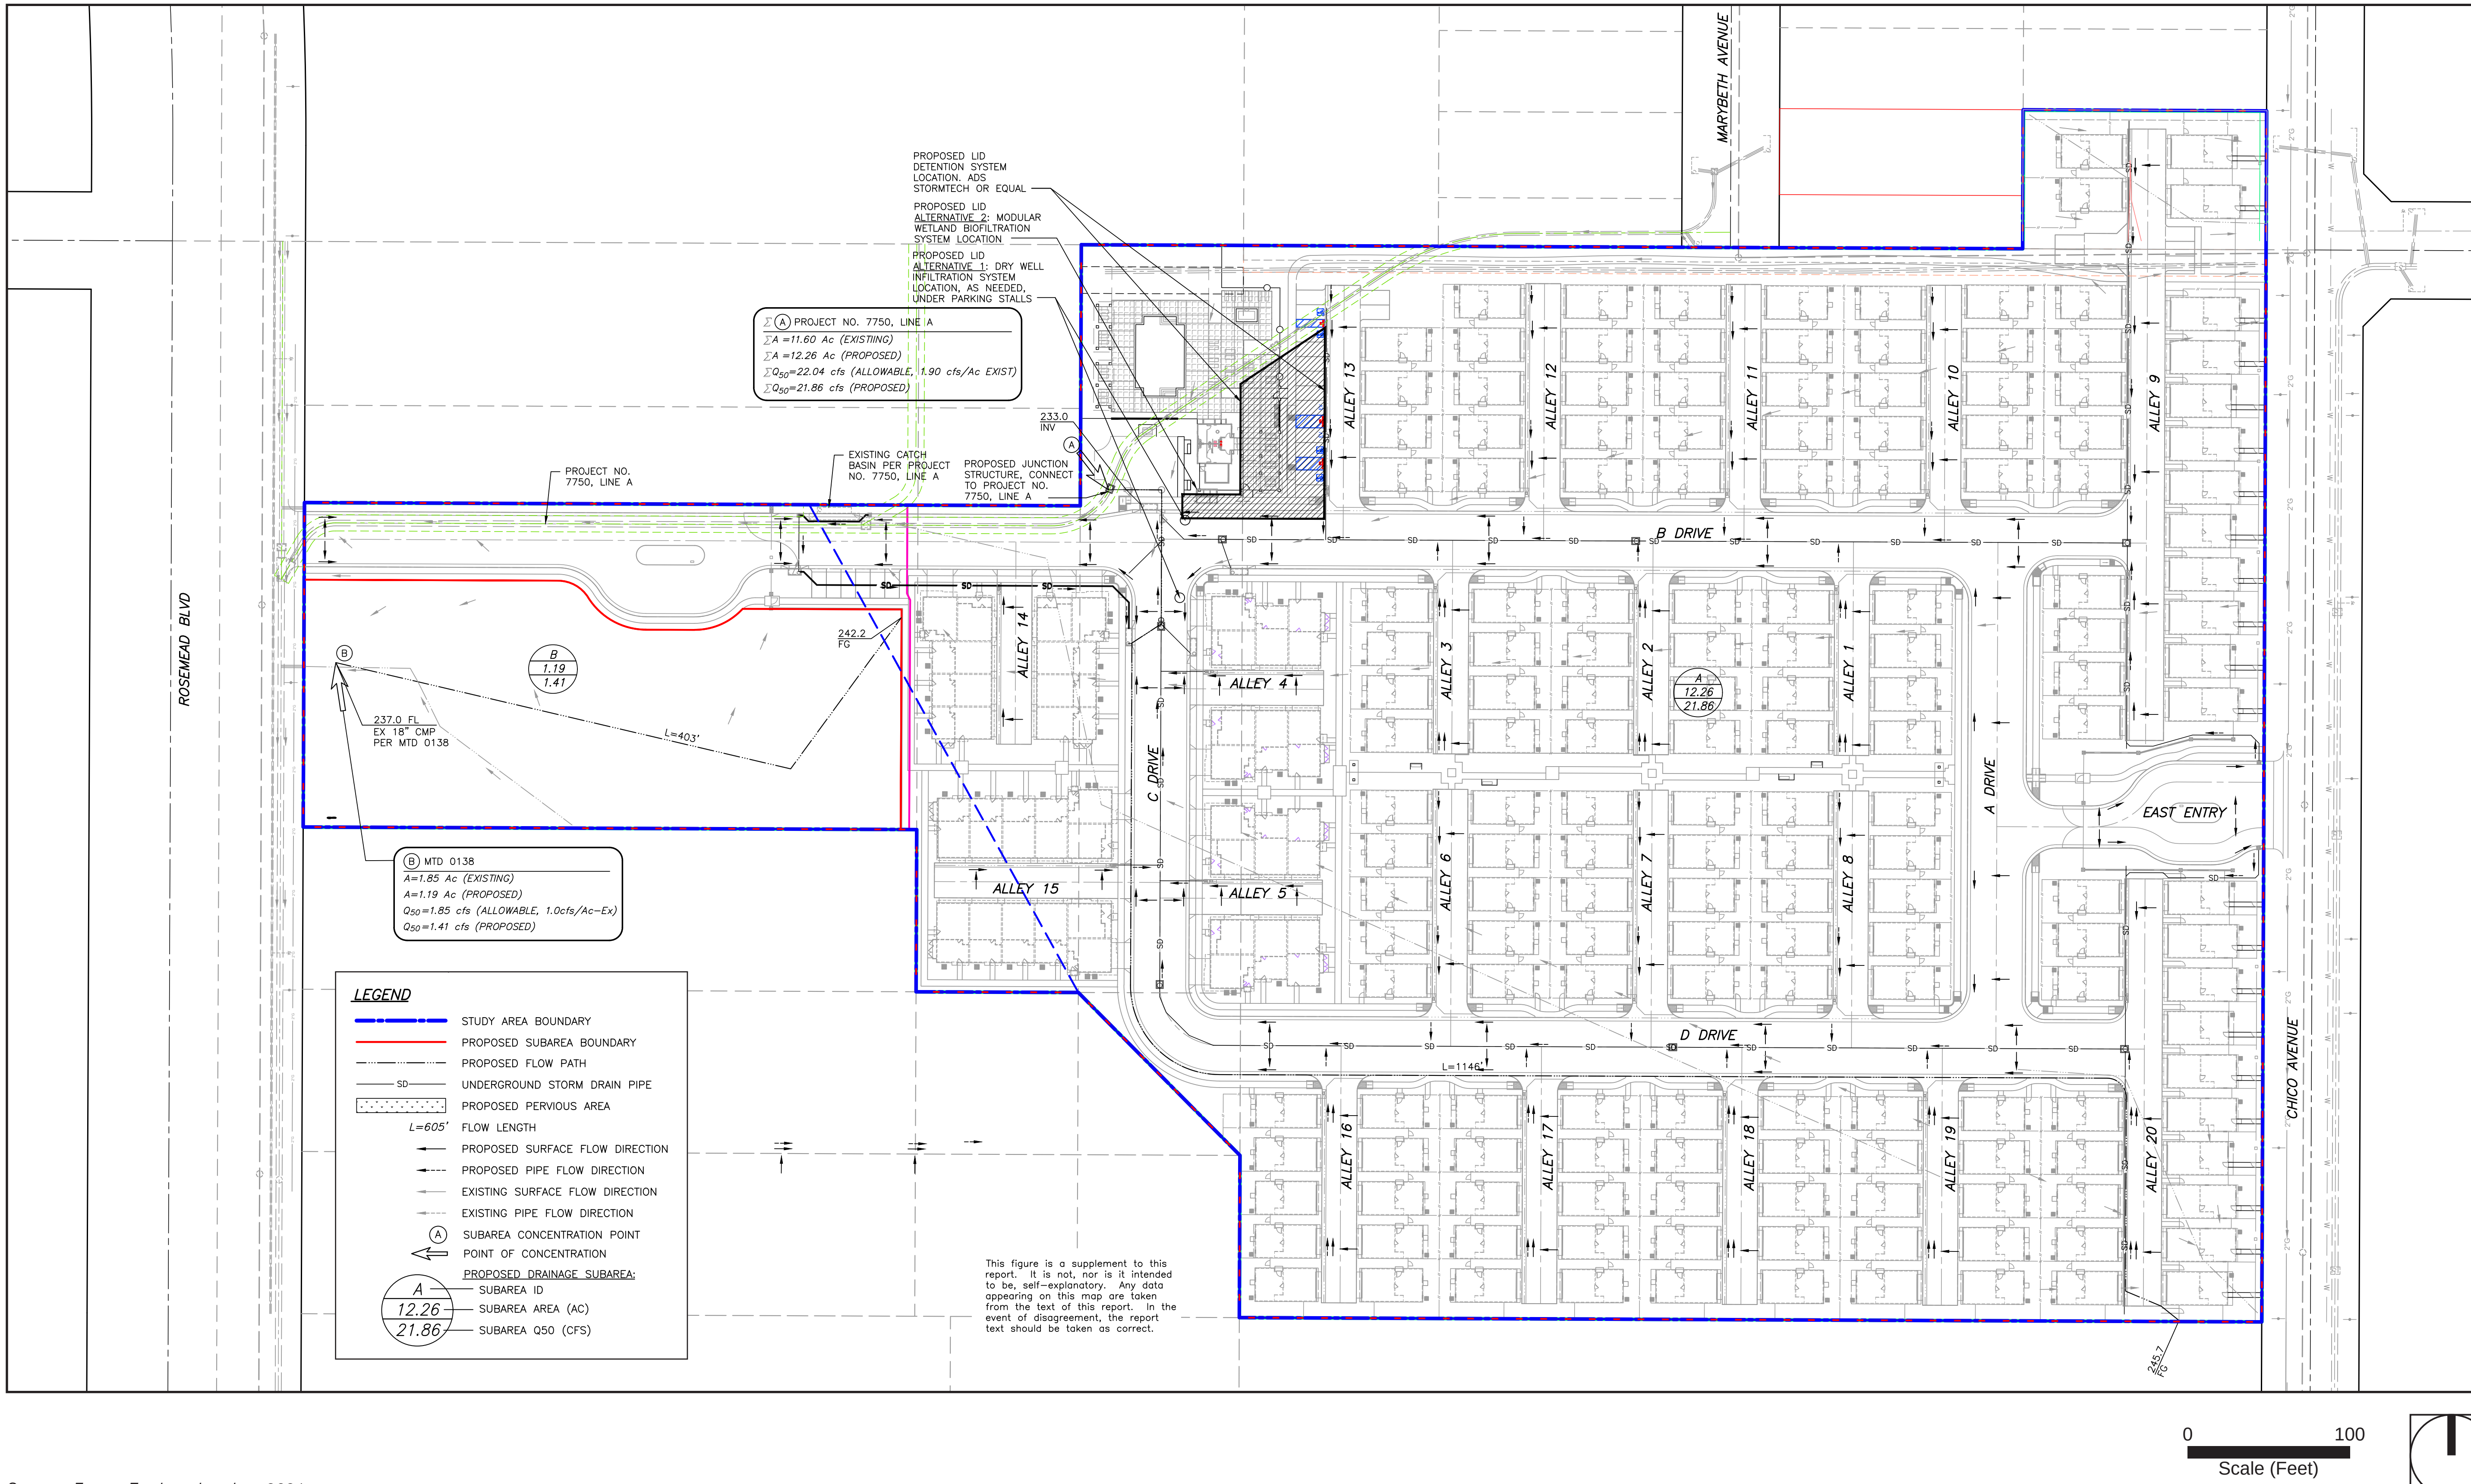
Table 11 Low Impact Development Dry Well BMP Design Summary

Subarea	BMP	BMP Area Required (ft^2)	BMP Area Provided (ft^2)	BMP Area Provided (ft^3)	BMP Area Provided (ft^3)
A	Drywell	3,476	3,572	27,807	28,067

Source: Forma, Hydrology and LID Report, March 1, 2021 (Appendix G).

If infiltration is determined to be infeasible during final engineering, a biofiltration system is proposed. The chamber system described above would detain and treat runoff during a rain event. Any runoff in excess of the system's capacity would be pumped into a modular wetland unit. The wetland would remove pollutants from the runoff, and clean water would be discharged to the Los Angeles County Storm Drain Project No. 7750, Line A. The modular wetland unit and association sump pump are sized to satisfy the County of Los Angeles LID guidelines, as shown in the Preliminary Hydrology and LID Report (see Appendix G).

Furthermore, the proposed project is exempt from hydromodification requirements since the site was previously developed in an urbanized area and does not increase the effective impervious area of the site as compared to the pre-project conditions. Furthermore, the proposed project discharges into a Los Angeles County Flood Control storm drain and satisfies the allowable discharge flow rates provided by the County.



The information provided in the Preliminary Hydrology and LID Report provides sufficient detail to identify the LID BMPs that would be implemented as a part of the proposed project and would prevent impacts to the quality of receiving waters. The combination of BMPs identified in the report addresses all identified pollutants of the proposed project. Implementation of the BMPs would be ensured through the City's development review and building plan check process. Additionally, Chapter 8.44 of the municipal code includes standards that prohibit the discharge of specific pollutants into stormwater and regulates connections to the storm drain system.

Based on the preceding, no significant water-quality and waste-discharge impacts from project operation activities would occur, and no mitigation measures are necessary.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less Than Significant Impact. The project site is over the Main San Gabriel groundwater basin (Main Basin). SGVWC would provide potable water to the project site. The SGVWC's water supply sources include groundwater pumped from the Main Basin and the Coastal Plain of Los Angeles Central Basin, recycled water, and imported treated water from the Metropolitan Water District of Southern California (MWD). Groundwater from the Main Basin historically accounted for approximately 90.0 percent of the SGVWC's overall water supplies. The water company has 30 active groundwater wells within its distribution system that are actively used to pump groundwater from the Main Basin, which encompasses 255 square miles and has an estimated total water storage capacity over 10 million acre-feet (SGVWC 2017, DWR 2004).

Figure 16 - Developed Condition Hydrology Map

Source: Forma Engineering, Inc, 2021

3. Environmental Analysis

This page intentionally left blank.

The SGVWC estimates that water demands in its service area for normal years would increase from approximately 37,708 acre-feet per year (afy) in 2020 to approximately 48,604 afy in 2040. The water company forecasts that it will have sufficient water supplies to meet water demands in its service area for normal, single-dry, and multiple dry years. The addition of the proposed project's water demand would be minimal and would not decrease groundwater supplies or impede sustainable groundwater management of the basin.

Additionally, as stated in the geotechnical investigation prepared for the proposed project (see Appendix E), groundwater was encountered at a depth of 53 feet. No excavation on-site would intersect the groundwater at these levels, and dewatering during construction is not anticipated. Furthermore, the project site is not in or near a groundwater recharge area/facility, nor does it represent a source of groundwater recharge.

Therefore, the proposed project would not substantially interfere with groundwater supplies or recharge. Impacts to groundwater supplies would be less than significant, and no mitigation measures are necessary.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) Result in a substantial erosion or siltation on- or off-site?

Less Than Significant Impact. Erosion and siltation impacts potentially resulting from alteration of the drainage pattern occur mostly during the project's construction phase, which would include site preparation and grading activities. Environmental factors that affect erosion include topographic, soil, wind, and rainfall characteristics. Siltation is most often caused by soil erosion or sediment spill. Following is a discussion of the potential erosion and siltation impacts that could occur during the construction and operational phases of the proposed project.

Project Construction

As discussed above in Section 3.10.a, the project construction contractor would be required to prepare and implement a SWPPP pursuant to the CGP during grading and construction. The SWPPP would specify erosion- and sediment-control BMPs that the project construction contractor would implement prior to and during grading and construction to minimize erosion and siltation impacts on- and off-site. Erosion-control BMPs are designed to prevent erosion, and sediment controls are designed to trap or filter sediment once it has been mobilized. BMPs that would be implemented during the proposed project's construction phase are discussed in detail in Section 3.10.a, above. For example, BMPs would include but are not limited to installation of perimeter silt fences; installation of silt fences around stockpile and covering of stockpiles; and stabilization of disturbed areas where construction ceases for a determined period of time (e.g., one week) with erosion controls.

Adherence to the BMPs in the SWPPP would reduce, prevent, or minimize soil erosion from project-related grading and construction activities. The construction-phase BMPs would also ensure effective control of not only sediment discharge, but also of pollutants associated with sediments (e.g., nutrients, heavy metals, and certain pesticides).

3. Environmental Analysis

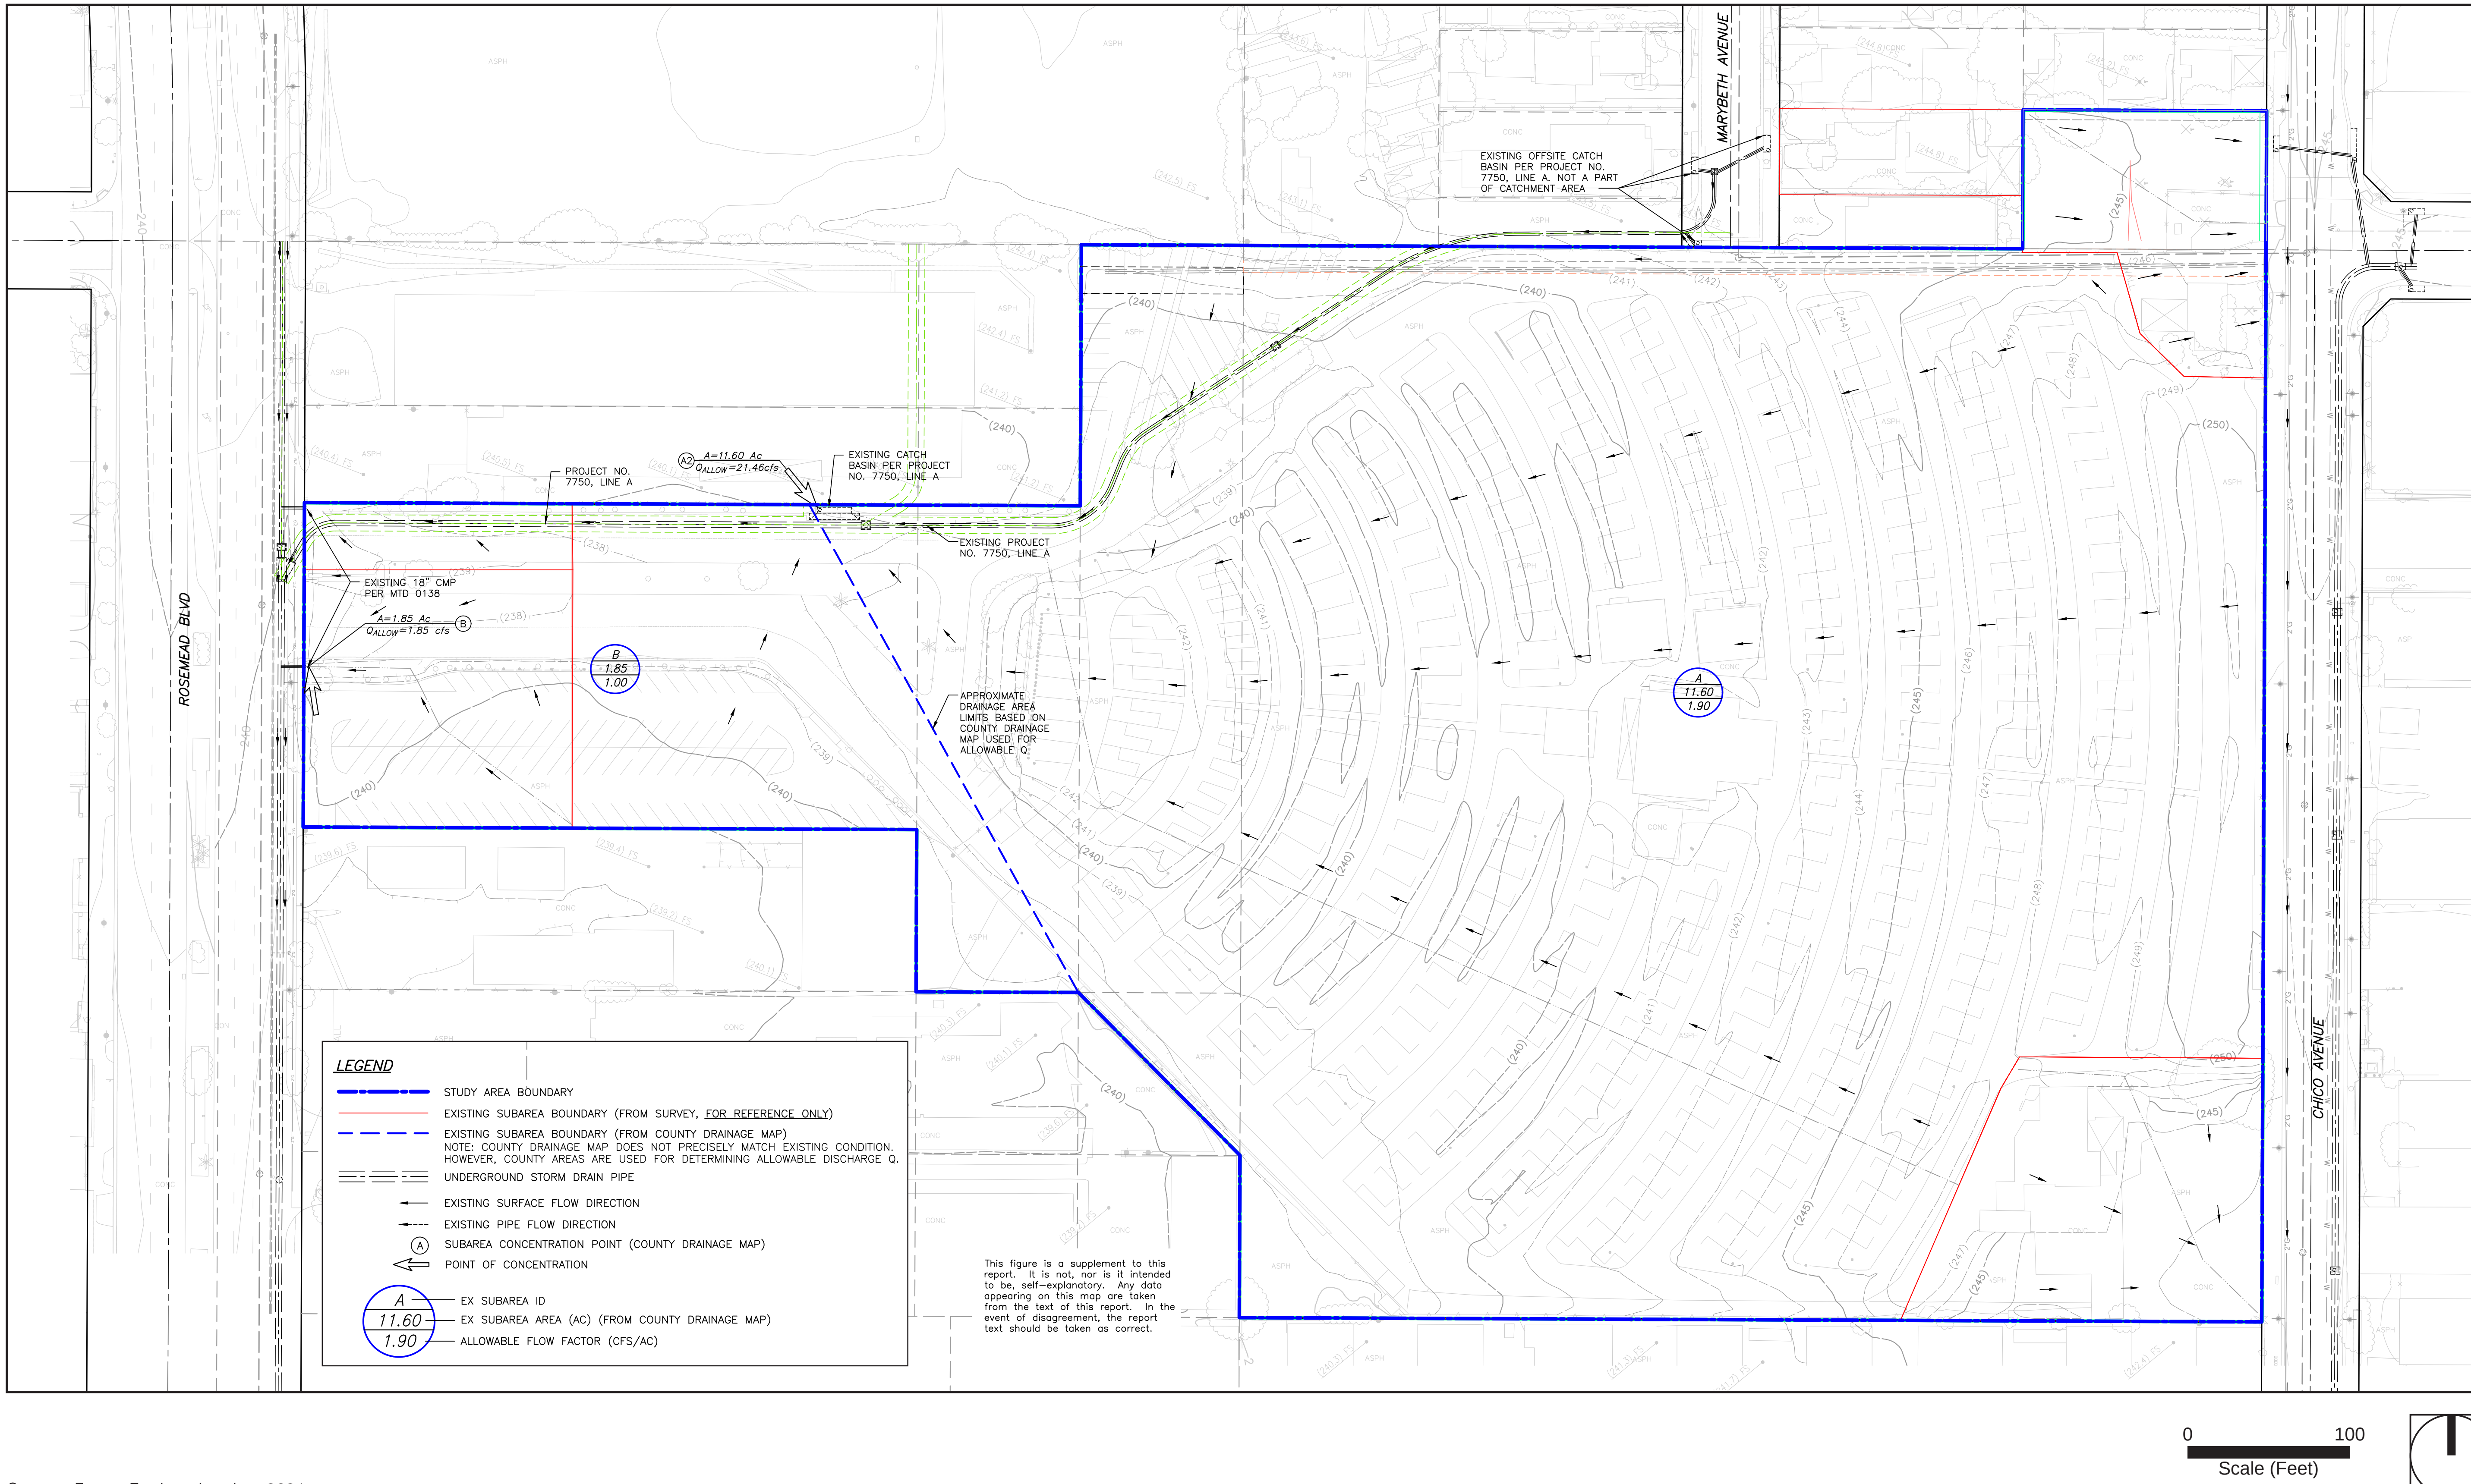
Therefore, project-related construction activities would not result in substantial erosion or siltation on- or off-site. Construction-related impacts would be less than significant, and no mitigation measures are necessary.

Project Operation

As shown in Figure 3, *Aerial Photograph*, the vast majority of the project site is paved. Under existing conditions, the county drainage map shows approximately 87.0 percent of the site drains from east to west to a sump catch basin near the middle of the site. The catch basin drains into the Los Angeles County Flood Control District system. The remaining 13.0 percent of the site drains east to west toward Rosemead Boulevard (see Figure 17, *Existing Hydrology Map*). The proposed drainage pattern remains generally the same as the predeveloped condition.

The proposed project would be implemented in accordance with the Hydrology and LID Report and abide by the requirements of the MS4 permit and the LID Standards Manual. For example, project design and operation would include implementation of BMPs specified in the Hydrology and LID report that would minimize runoff and soil erosion and siltation into stormwater and thus minimize sedimentation downstream.

Additionally, project development would be required to comply with the standards of Chapter 8.44 of the municipal code, which prohibits the discharge of specific pollutants into stormwater, regulates connections to the storm drain system, and requires development projects to implement permanent BMPs on individual sites to reduce pollutants in the stormwater.



Therefore, project development would not substantially alter the existing drainage pattern of the site or area in a manner that would result in substantial erosion or siltation on- or off-site, and operation-related impacts would be less than significant, and no mitigation measures are necessary.

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?

Less Than Significant Impact. Under existing conditions (see Figure 17, *Existing Hydrology Map*), subarea A, which has a total of 11.06 acres, drains from east to west to a sump catch basin that discharges into the Los Angeles County Flood Control District, Project No. 7750, Line A. The allowable discharge to Line A is 1.90 cubic feet per second (cfs) per acre. Therefore, the allowable flow to Line A from the site is 22.04 cfs. Subarea B drains toward Rosemead Boulevard on paved surfaces and discharges to County Municipal Transfer Drain (MTD) 138.

Under proposed conditions, stormwater from the proposed project would be collected by a private underground storm drain system and discharged to Line A via a new junction structure (see Figure 16, *Developed Condition Hydrology Map*). The proposed flow for the 50-year storm event to Line A is 21.86 cfs. The flow calculation is based on the Los Angeles County Department of Public Works' 2006 Hydrology Manual. The flow rate under proposed conditions would be less than the current allowable flow rate to Line A.

Figure 17 - Existing Hydrology Map

Source: Forma Engineering, Inc, 2021

3. Environmental Analysis

This page intentionally left blank.

Based on the preceding, project development would not substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site. Impacts would be less than significant, and no mitigation measures are necessary.

iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Less Than Significant Impact. The following describes the proposed project's potential impacts related to storm drainage systems and runoff.

Capacity of Stormwater Drainage Systems

Project impacts on the capacity of storm drainage systems would be less than significant, as substantiated in Section 3.10.c.ii, above. No mitigation measures are necessary.

Polluted Runoff

The proposed project's stormwater pollution impacts would be less than significant, as substantiated in Section 3.10.a, above. No mitigation measures are necessary.

iv) Impede or redirect flood flows?

Less than Significant Impact. The project site is not in a 100-year flood hazard zone (FEMA 2008), but it is in the dam inundation zone of the Santa Fe Dam (South El Monte 2000). The dam is approximately seven miles northeast of the project site. The Santa Fe dam and reservoir are a flood control project, completed in January 1949, in the Los Angeles County Drainage Area flood control system. The dam's embankment is on the San Gabriel River, south of Azusa. The primary purpose of the dam is to provide flood risk management to the communities along the San Gabriel River downstream of the reservoir. The Army Corps of Engineers (USACE) operates the dam and reservoir and engages in routine maintenance activities within the operational areas of the reservoir year-round to maintain the operational capacity of the dam. As congressionally appropriated funding allows, the USACE works to upgrade aging structures and systems. Annual maintenance activities include grading of access roads, vegetation removal, and an annual safety inspection. In addition, the control house, gates, and all mechanical and electrical equipment are checked at the dam to make sure that the dam is functioning in accordance with State standards (USACE 2021).

The Emergency Action Plan (EAP) for the Santa Fe Dam includes procedures for damage assessment and emergency warnings per the requirements of the California Division of Safety of Dams. The plan has been developed in coordination with local emergency management officials. The EAP identifies potential emergency conditions and specifies preplanned actions to help minimize property damage and loss of life. The EAP also contains procedures to issue early warning and notification messages to downstream emergency management authorities. Additionally, the dam is governed by the USACE's Dam Safety Program to maintain public safety, and an integral part of the program is the risk-informed screening process. Dams are classified based on confirmed or unconfirmed dam safety issues, the combination of life or economic consequences if failure occurs, and the probability of failure. This process enables the

3. Environmental Analysis

USACE to prioritize dam safety actions to correct deficiencies, which include interim risk reduction measures to be undertaken while further investigations are conducted, and remedial actions are implemented (Army Corps of Engineers 2012). Therefore, impacts due to inundation by Santa Fe Dam are less than significant.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Less than Significant. As noted in Section 3.10.c.iv, the project site is not in 100-year flood zone but is within the dam inundation area of the Santa Fe Dam. However, with the implementation of the EAP and the USACE's Dam Safety Program, impacts would be less than significant.

A seiche is an oscillating surface wave in a restricted or enclosed body of water, generated by ground motion, usually during an earthquake. Seiches are of concern for water storage facilities, because inundation from a seiche can occur if the wave overflows a containment wall, such as the wall of a reservoir, water storage tank, dam, or other artificial body of water. The Santa Fe Reservoir and smaller reservoirs within a three-mile radius of the Santa Fe Reservoir could generate seiches. A seiche could theoretically occur in these reservoirs as the result of an earthquake or other disturbance, but the flooding impact would be less than for the dam inundation zone. The closest of these reservoirs is five miles away and is not anticipated to affect the site.

Tsunamis are a type of earthquake-induced flooding produced by large-scale sudden disturbances of the sea floor. The proposed project is approximately 23 miles inland; therefore, the site is outside the tsunami hazard zone and would not be affected by a tsunami.

Based on the preceding, the proposed project would not risk release pollutants as the result of floods, tsunami, or seiche. Therefore, no impact would occur, and no mitigation measures are necessary.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

No Impact. Water quality in South El Monte is regulated by the Los Angeles RWQCB and its Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties. As substantiated in Section 3.10.a, the proposed project would not violate any water quality standards and would therefore not obstruct the implementation of the Basin Plan. Therefore, no impact would occur, and no mitigation measures are necessary.

Additionally, the project site is in the Main San Gabriel Groundwater Basin, which is characterized as a low priority basin[9] and is not governed by a groundwater quality management plan. As substantiated in Sections 3.10.a and b, the proposed project would not violate any water quality standards and would not decrease groundwater supplies or interfere substantially with groundwater recharge. Moreover, the Specific Plan includes sustainability guidelines that highlight water efficiency strategies such as minimizing turf areas within the

[9] Basins designated as low and very-low priority are not subject to the requirements of the Sustainable Groundwater Management Act but are encouraged to form groundwater sustainability agencies and develop new groundwater management plans or update existing management plans in accordance with the water code.

community, using drought-tolerant plants, and using reclaimed water for irrigation of common areas. Therefore, no impact would occur, and no mitigation measures are necessary.

3.11 LAND USE AND PLANNING

Would the project:

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Physically divide an established community?				X
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?			X	

a) Physically divide an established community?

No Impact. Development on the project site would occur within the project site boundaries. The proposed project would not disrupt the internal circulation within the residential neighborhood to the north of the site. Additionally, the proposed project would introduce a compatible residential use to the south of existing residential uses. Therefore, the proposed project would not divide an established community.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Less Than Significant Impact. The project site is currently zoned Commercial Manufacturing (C-M) and Multiple Family Residential (R-3), and the land use designation of the site is Commercial-Manufacturing (C-M) and Medium-Density Residential (MDR). The proposed project would require a zone change to Specific Plan (SP) and a land use change to Medium Density Residential (MDR) in order to implement the proposed project. The Specific Plan, which has been prepared to realize the objectives of the proposed project, would require approval by the City Council. The Specific Plan (SP) zone would allow for residential uses and open space areas on the project site in planned building groups while ensuring compliance with the spirit and intent of the zoning code and the City's adopted General Plan. Moreover, the proposed project would be consistent with the policies for the General Plan. For example, Policy 1.1 of the Land Use Element states that a range of densities and housing types should be provided. The proposed project would provide townhomes and single-family homes, which would provide a range of housing density in the project area. Additionally, Policy 4.2 of the Land Use Element indicates that new opportunities for housing in South El Monte should be provided such as through intensification in designated neighborhoods. The proposed provide would increase the number of housing units in the city. Policy 6.1 of the Land Use Element encourages redevelopment activities, and the proposed project would revitalize an underutilized site to provide additional housing opportunities in the City. Impacts would be less than significant.

3.12 MINERAL RESOURCES

Would the project:

	Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state?				X
b)	Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				X

a) Result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state?

No Impact. There are four mineral resource zones (MRZ):

- **MRZ-1.** Adequate information indicates that no significant mineral deposits are present or likely to be present.
- **MRZ-2.** Adequate information indicates that significant deposits are present or there is a high likelihood for their presence, and development should be controlled.
- **MRZ-3.** The significance of mineral deposits cannot be determined from the available data.
- **MRZ-4.** There is insufficient data to assign any other MRZ designation.

The mineral resource designation is intended to prevent incompatible land use development on areas determined to have significant mineral resource deposits. The project site and surrounding areas are not developed for mineral resources, and the City's General Plan Resources Element indicates that there are no mineral resources in the city. The project site is in MRZ-3 (CDC 2015). The areas surrounding the project site are developed with buildings, and therefore no loss of known resources would result from project implementation. No impact would occur.

b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact. No mining sites are identified in the City of South El Monte General Plan. Therefore, development of the proposed project would not cause a loss of availability of a mining site. No impact would occur.

3.13 NOISE

The analysis in this section is based in part on the following, included as Appendix H:

- *Noise Analysis,* PlaceWorks, May 2021

Would the project result in:

	Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			X	
b)	Generation of excessive groundborne vibration or groundborne noise levels?		X		
c)	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			X	

3.13.1.1 NOISE FUNDAMENTALS

Noise is unwanted sound, known to have several adverse effects on people, including hearing loss, speech and sleep interference, physiological responses, and annoyance. Based on these known adverse effects of noise, the federal, state, and city governments have established criteria to protect public health and safety and to prevent the disruption of certain human activities, such as classroom instruction, communication, or sleep. Appendix H provides the fundamentals of noise and vibration, additional local regulatory background information, and the construction and traffic noise modeling data for the proposed project.

3.13.1.2 ENVIRONMENTAL SETTING

Existing Noise Conditions

The project site noise environment is primarily characterized by roadway noise. The primary traffic noise source is from Rosemead Boulevard, west of the project site. Secondary noise sources include parking lot noise, and air handling equipment such as HVAC mechanical noise from retail stores to the north and west and adjacent residential uses. The City of South El Monte General Plan Future Noise Contours figure shows the project site to be predominately outside the 65 CNEL noise contour, with the exception of the project driveway off Rosemead Boulevard. Therefore, proposed dwelling units would be outside the 65 CNEL noise contour. Per the *CBIA v. BAAQMD* ruling, noise compatibility for future on-site sensitive receptors is generally no longer the purview of the CEQA. However, the City requires that residential projects achieve the interior 45 dBA CNEL noise standard of the California Building Code Title 24.

3. Environmental Analysis

Sensitive Receptors

Certain land uses are particularly sensitive to noise and vibration. These uses include residences, schools, hospital facilities, houses of worship, and open space/recreation areas where quiet environments are necessary for the enjoyment, public health, and safety of the community. The nearest sensitive receptors to the proposed project are residences adjacent to the north. Other sensitive receptors include additional residences 450 feet to the east and Potrero Intermediate School 0.23 mile to the northeast in the City of El Monte.

3.13.1.3 APPLICABLE STANDARDS

California Building Code

The California Building Code is Title 24 of the California Code of Regulations. California Building Code Part 2, Volume 1, Chapter 12, Section 1207.11.2, Allowable Interior Noise Levels, requires that interior noise levels attributable to exterior sources shall not exceed 45 dBA in any habitable room. The noise metric is evaluated as either the Ldn or the CNEL, consistent with the noise element of the local general plan.

Per the *California Building Industry Association v. Bay Area Air Quality Management District* ruling, noise compatibility for future on-site sensitive receptors is generally no longer the purview of the CEQA. However, the City requires that residential projects achieve the interior 45 dBA CNEL noise standard of the California Building Code Title 24.

City of South El Monte Municipal Code

Exterior Noise Standards

The City of South El Monte Municipal Code has established exterior noise limits in Chapter 8.20, Noise Regulations. The permissible sound levels by receiving land use are summarized in Table 12, *Exterior Noise Limits: City of South El Monte*.

Table 12 Exterior Noise Limits: City of South El Monte

Land Use	Daytime 7:00 am to 10:00 pm	Nighttime 10:00 pm to 7:00 am
One- or Two-Family Residential Zone	55 dBA	45 dBA
Multiple Dwelling Residential Zone, Public Zone	60 dBA	50 dBA
Commercial Zone or Commercial-Manufacturing Zone	60 dBA	55 dBA
Manufacturing Zone	70 dBA	70 dBA

Source: South El Monte Municipal Code.
Notes:
In the event the alleged offensive noise contains a steady, audible tone such as a whine, screech, or hum, or it is a repetitive noise such as a hammering or riveting, or contains music or speech conveying informational content, the exterior noise limits shall be reduced by 5 dBA.
The exterior noise limit shall not exceed:
The noise standard for a cumulative period of more than thirty minutes in any hour (L50);
The noise standard plus 5 dBA for a cumulative period of more than fifteen minutes in any hour (L25);
The noise standard plus 10 dBA for a cumulative period of more than five minutes in any hour (L8);
The noise standard plus 15 dBA for a cumulative period of more than one minute in any hour (L1); or
The noise standard plus 20 dBA for any period of time (Lmax).

Vibration

Section 8.20.020(B) states that no person shall operate or permit the operation of any device or machine that creates a vibration above the vibration perception threshold when measured at or beyond the property boundary of the source. Because the City does not quantify this standard, the Federal Transit Administration (FTA) criterion for vibration annoyance of 72 VdB at residential receptors is used to determine impact significance.

Construction Noise

No person shall operate or cause or authorize the operation of any tools or equipment used in construction, drilling, repair, alteration, or demolition work between the hours of 10:00 pm and 7:00 am or at any time on weekends or holidays, such that the sound creates a noise disturbance across the real property line of an adjacent or nearby property developed entirely or partially for residential use. However, the City does not include a quantified construction noise limit for work during the daytime hours of 7:00 am to 10:00 pm. Therefore, the FTA construction noise criterion of 80 dBA $L_{eq(8hr)}$ for residential receptors is used to determine impact significance.

Air Handling Equipment

No person shall operate or permit the operation of any air conditioning or air handling equipment (such as HVAC equipment) in such a manner as to exceed 55 dBA at any point on neighboring property line, five feet above grade level, no closer than three feet to any wall.

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Less Than Significant Impact. Construction is estimated to be completed in approximately 19 months, beginning in Fall 2022 and ending in Spring of 2024. The construction workday is anticipated to be 7:00 am to 4:00 pm, Monday through Friday. Construction equipment required for excavation, grading, and other construction activities would include but is not limited to, concrete saws, excavators, dozers, loaders, backhoes, forklifts, scrapers, tractors, trencher, pavers, welders, cranes, generators, and air compressors.

Construction Noise

Construction Vehicles

The transport of workers and materials to and from the construction site could incrementally increase noise levels along access road or roads. Individual construction vehicle pass-bys may create momentary noise levels of up to approximately 85 dBA (L_{max}) at 50 feet from the vehicle, but these occurrences would generally be infrequent and short lived.

Construction would generate temporary trips from workers' and vendors' vehicles. Based on data provided by the applicant, project construction is anticipated to generate up to 110 daily worker and vendor trips during overlapping phases. For hauling, construction activities would generate up to 32 daily haul truck trips during

3. Environmental Analysis

demolition debris haul and grading soil haul. Access to the project site would be through Rosemead Boulevard or Chino Avenue via Garvey Avenue or Rush Street, which have existing average daily traffic (ADT) volumes ranging from 4,020 to 53,360 (see Table 14, *Project and Cumulative Traffic Noise Increase*). Additional trips from construction vehicles would be temporary, and the addition of 110 worker and vendor trips and 32 haul trips would result in a negligible noise increase. Therefore, this impact would be less than significant.

Construction Equipment

Noise generated by on-site construction equipment is dependent on the type of equipment used, its location relative to sensitive receptors, and the timing and duration of noise-generating activities. Each phase of construction involves different kinds of equipment and has distinct noise characteristics. The basis for noise levels from construction activities are typically the loudest piece or pieces of equipment. The dominant equipment noise source is typically the engine, although work-piece noise (such as dropping of materials) can also be noticeable.

Heavy equipment, such as a dozer or a loader, can have maximum, short-duration noise levels of up to 85 dBA at 50 feet. However, overall noise emissions vary considerably, depending on the specific construction activity performed at any given moment. Noise attenuation due to distance, the number and type of equipment, and the load and power requirements to accomplish tasks at each construction phase would result in different noise levels from construction activities at a given receptor. Since noise from construction equipment is intermittent and diminishes at a rate of at least 6 dBA per doubling of distance (conservatively ignoring other attenuation effects from air absorption, ground effects, and shielding effects), the average noise levels at noise-sensitive receptors could vary considerably, because mobile construction equipment would move around the project site with different loads and power requirements.

The average noise produced at each construction phase is determined by combining the L_{eq} contributions from the three loudest pieces of construction equipment by phase, while accounting for the ongoing time variations of noise emissions (commonly referred to as the usage factor). Noise levels were also calculated at spatially averaged distances (i.e., from the acoustical center of the general construction site) to the property line of the nearest receptors. Although construction may occur across the entire construction area, the area around the center of construction activities best represents the potential average construction-related noise levels at the various sensitive receptors.

PlaceWorks used construction activity information by phase provided by the applicant to estimate construction noise using the Federal Highway Administration Roadway Construction Noise Model (RCNM). The associated, aggregate sound levels—grouped by construction activity—are summarized in Table 13, *Project-Related Construction Noise,* L_{eq} *dBA*. RCNM modeling input and output worksheets are included in Appendix H. As shown in Table 13, average construction-related noise levels would be up to 68 dBA and not exceed the 80 dBA $L_{eq(8hr)}$ threshold at the nearest sensitive receptors. Therefore, impacts would be less than significant.

Table 13 Project-Related Construction Noise, L_{eq} dBA

Construction Activity Phase	Reference Noise Level at 50 feet	Attenuated Noise Levels		
		Residential Uses to North at 335 feet	Residential Uses to East at 450 feet	Potrero Intermediate School to Northeast at 1,200 feet
Asphalt/Building Demolition	84.6	68	66	57
On-Site Reprocessing /Crushing[1]	77.9	61	61	50
Rough Grading	85.0	68	66	57
Utility Trenching	81.9	76	63	54
Paving	83.5	67	64	56
Building Construction	83	66	64	55
Architectural Coating	74	57	55	46

Notes: Decibels rounded up to the nearest whole number.
Calculations performed with RCNM are included in Appendix H. Distance measurements were taken using Google Earth from the approximate acoustical center of the construction site.

Stationary Noise

HVAC Equipment

HVAC units are proposed to be located in the residential backyards. The nearest sensitive receptors to HVAC equipment would be residences approximately 60 feet to the north. HVAC specifications provided by the applicant show that, depending on the unit size and series, the proposed HVAC equipment (Carrier model CA15NA) could generate sound power levels between 71 and 76 dBA without shielding. This would result in a sound pressure level of up to approximately 40 dBA at 60 feet. This would be below the 55 dBA daytime noise standards for the air handling equipment set forth in the municipal code. Therefore, impacts would be less than significant.

Community Recreational Area

The proposed community recreational area would include a pool, spa, open space, lawn play areas, and a barbeque counter. Use of the community recreational area would be limited to residents and guests only. Noise generated would mostly be from people using the recreational space. Based on similar uses, it is calculated that the proposed pool area would generate noise levels of approximately 55 dBA at 77 feet. The nearest sensitive receptor to the pool area is approximately 90 feet to the north. At this distance, noise levels would attenuate to approximately 54 dBA. Additionally, a seven-foot-high wall is proposed to be constructed around the northern perimeter. This wall would block line-of-sight to the sensitive receptors to the north, providing an additional 5 dBA of noise attenuation. The proposed operational hours for the recreational area are 8:00 am to 10:00 pm, which are within the municipals code's daytime hours. Therefore, noise levels would not exceed the daytime noise limit of 55 dBA, and impacts would be less than significant.

Traffic Noise

Noise increases can be put into three categories—audible, potentially audible, and inaudible. "Audible" increases are perceptible to humans and generally refer to a change of 3 dBA or more, because 3 dBA is the threshold

3. Environmental Analysis

of perceptibility in exterior (uncontrolled) environments. For example, traffic flows would need to double (e.g., 10,000 vehicles per day to 20,000 per day) to create a 3 dBA CNEL increase in traffic-generated noise levels. A "potentially audible" noise increase refers to a change in noise level between 1 and 3 dBA. A change in noise level of less than 1 dBA is typically "inaudible" to humans except under quiet conditions in controlled environments. A project will normally have a significant effect on the environment related to noise if it will substantially increase the ambient noise levels for adjoining areas. Based on these categories, a significant impact would occur if the following thresholds of significance, similar to those recommended by the Federal Aviation Administration, would be exceeded at sensitive receptor locations. A significant impact would occur if traffic noise increases would exceed:

- 1.5 dBA for existing ambient noise environments of 65 dBA CNEL and higher.
- 3 dBA for existing ambient noise environments of 60 to 64 CNEL.
- 5 dBA for existing ambient noise environments of less than 60 dBA CNEL.

ADT volumes for existing and future conditions provided by Iteris were used to calculate traffic noise increases. Noise increase is calculated by comparing Existing Plus Project traffic volumes to Existing no Project volumes logarithmically. Similarly, cumulative noise impacts were calculated by comparing Cumulative Plus Project to Cumulative no Project logarithmically.[10]

As shown in Table 14, *Project and Cumulative Traffic Noise Increase,* the maximum traffic noise increase is 0.4 dBA CNEL along Chico Avenue from Garvey Avenue to Fern Street. All study roadway segments would experience project and cumulative traffic noise increase of less than 1.5 dBA CNEL. Therefore, traffic noise impacts would be less than significant.

[10] Project noise increase = 10*Log(Existing Plus Project/Existing no Project); Cumulative noise increase = 10*Log(Future with Project/Existing no Project).

Table 14 Project and Cumulative Traffic Noise Increase

Roadway Segment	ADT Volumes				dBA CNEL	
	Existing No Project	Existing Plus Project	Cumulative No Project	Cumulative with Project	Project Related Increase	Cumulativ e Increase
Rosemead Boulevard – Garvey Avenue to Fern Street	53,360	53,901	53,810	54,351	0.0	0.1
Rosemead Boulevard – Fern Street to Project Entrance	52,140	52,681	52,780	53,321	0.0	0.1
Rosemead Boulevard – Project Entrance to Rush Street	50,240	51,054	50,880	51,694	0.1	0.1
Garvey Avenue – Rosemead Boulevard to Chico Avenue	21,980	22,074	22,100	22,194	0.0	0.0
Garvey Avenue – east of Chico Avenue	21,840	22,123	22,100	22,383	0.1	0.1
Chico Avenue – Garvey Avenue to Fern Street	4,020	4,422	4,020	4,422	0.4	0.4
Chico Avenue – Project entrance to Rush Street	4,020	4,149	4,020	4,149	0.1	0.1
Rush Street – east of Chico Avenue	11,600	11,789	11,600	11,789	0.1	0.1
Rush Street – west of Chico Avenue	12,960	13,019	12,960	13,019	0.0	0.0
Fern Street – Chico avenue to Potrero Avenue	2,370	2,464	2,370	2,464	0.2	0.2
Potrero Avenue – Fern Street to Garvey Avenue	3,830	3,924	3,830	3,924	0.1	0.1
Potrero Avenue – Rush Street to Fern Street	4,030	4,030	4,030	4,030	0.0	0.0

Source: Iteris, 2021

b) Generation of excessive groundborne vibration or groundborne noise levels?

Less Than Significant Impact with Mitigation.

Construction can generate varying degrees of ground vibration, depending on the construction procedures and equipment. Operation of construction equipment generates vibrations that spread through the ground and diminish with distance from the source. The effect on buildings near the construction site varies depending on soil type, ground strata, and receptor-building construction. The effects from vibration can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibrations at moderate levels, to slight structural damage at the highest levels. Vibration from construction activities rarely reaches the levels that can damage structures.

Vibration Annoyance

As mentioned in Section 3.13.1.3, *Applicable Standards*, the City does not establish a quantified vibration annoyance threshold. The FTA criterion of 72 VdB is used to determine significance. Vibration due to the project would be generated from temporary construction activities. To determine attenuated average vibration levels at the nearest sensitive receptors, vibration levels are calculated by measuring the distance from the center of the project site to the sensitive receptor building façade. The nearest sensitive receptors are the residences approximately 340 feet to the north, and Potrero Intermediate School approximately 1,200 feet to the northeast. As shown in Table 15, *Vibration Levels for Typical Construction Equipment,* vibration levels would not exceed 72 VdB at the nearest sensitive receptors. Therefore, impacts would be less than significant.

3. Environmental Analysis

Table 15 Vibration Levels for Typical Construction Equipment

Equipment	FTA Reference Vibration Levels VdB at 25 feet	VdB at Residences to North at 340 feet	VdB at Potrero Intermediate School to Northeast at 1,200 feet
Vibratory Roller	94	60	44
Large Bulldozer	87	53	37
Loaded Trucks	86	53	36
Jackhammer	79	52	29
Small Bulldozer	58	45	8

Source: FTA 2018.

Architectural Damage

For reference, a vibration level of 0.2 inch per second (in/sec) peak particle velocity (PPV) is used as the limit for non-engineered timber and masonry buildings, which would be applied to the surrounding structures (FTA 2018). Table 16, *Vibration Levels for Typical Construction Equipment,* shows that typical construction equipment produces vibration levels up to 0.21 in/sec PPV at a distance of 25 feet. A significant impact would occur if vibration levels would exceed 0.2 in/sec PPV at the façade of the surrounding structures.

The nearest structures to the project site are the residential uses immediately to the north of the project site. Based on available site plans, the residential buildings would be within 20 feet of proposed paving activities for driveways. Due to the proximity of paving activities and potential use of a vibratory roller for paving, impacts would be potentially significant.

Table 16 Vibration Levels for Typical Construction Equipment

Equipment	FTA Reference Vibration Levels PPV (in/sec) at 25 feet	PPV (in/sec) at 20 feet
Vibratory Roller	0.21	0.293
Large Bulldozer	0.089	0.124
Loaded Trucks	0.079	0.106
Jackhammer	0.035	0.049
Small Bulldozer	0.003	0.001

Source: FTA 2018.
Note: Values in **bold** exceed the significance threshold of 0.2 in/sec PPV.

Implementation of Mitigation Measure N-1 would reduce temporary construction vibration levels at the surrounding structures to a less than significant level. Specifically, the use of a static roller is estimated to generate vibration levels of approximately 0.05 in/sec PPV at a distance of 25 feet (New Zealand Transport Agency 2012), which would reduce construction vibration levels below the significance threshold of 0.2 in/sec PPV.

Mitigation Measures

N-1 Where paving is required within 25 feet of adjacent, off-site structures, a static roller shall be used in lieu of a vibratory roller. This requirement shall be included in the list of conditions on construction plans.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. The nearest airport or airstrip to the project site is San Gabriel Valley Airport (formerly known as the El Monte Airport) in the City of El Monte, approximately two miles to the northeast. The El Monte Airport Master Plan Report shows the Airport's 60 CNEL noise contour does not extend to the project site. Figure 7B of the El Monte Airport Master Plan depicts the southwestern point of the 60 CNEL extending just past the I-10 freeway, but does not pass Brockway Street, which is approximately 1 mile northeast of the project site (Los Angeles County 1995). Workers or people residing in the project area would not be exposed to excessive airport noise. Therefore, no impact would occur.

3.14 POPULATION AND HOUSING

Would the project:

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			X	
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?				X

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less Than Significant Impact. Construction of the proposed project would require contractors and laborers. Because of the size of the project, the City expects that the supply of general construction labor would be available from the local and LA County regional labor pool because the current regional unemployment is 9.9 percent (BLS 2020).

Once complete, the 207 dwelling units would be expected to add 913 residents,[11] averaging 4.4 residents per household (DOF 2020). When compared to the 2020 population of 21,204, the proposed project would result in an approximately 4.3 percent increase to the City of South El Monte (DOF 2020). SCAG projects population growth in its member cities as part of the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). The projections show an estimated 2040 population of 22,500, which is an increase of 1,296 residents from the 2020 estimated population. The potential 913 new residents of the project would make up about 70.0 percent of the projected 20-year increase for the city based on the SCAG RTP/SCS (SCAG 2016). If the project population is added to the existing population, the resulting estimated population of 22,117 residents, which assumes all of the project's residents are new to the city, would remain below the year SCAG 2040 projection by 383. Because the projected increase in population from the proposed project is less than the regionally anticipated population growth, the impact to population is considered less than significant.

The proposed project would provide more housing opportunities in the city. The new units would increase housing in the City by 207 units, which would represent about 4.2 percent[12] of the 2040 housing projection. The state of California has a shortage of housing, and in 2019, Governor Newsom signed several bills aimed to address the need for more housing, including the Housing Crisis Act of 2019 (Senate Bill 330). The proposed project would help address housing needs and accommodate population growth in the city. Impacts would be less than significant.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact. The project site is currently vacant except for a rental structure at the northeast corner of the site; the occupants of this structure have relocated by choice. The proposed project would introduce residential uses onto the project site, resulting in an increase in the city's housing supply. The proposed project would displace one household but provide 207 new housing units, and it would not result in the need for replacement housing elsewhere. Impacts would be less than significant.

3.15 TRANSPORTATION

The analysis in this section is based in part on the following, included as Appendix D-a and D-b, respectively:

- *Starlite Development Traffic Impact Analysis,* Iteris, June 9, 2021
- *2540 Rosemead Boulevard – San Gabriel Valley Council of Governments Vehicle Miles Traveled Evaluation Tool Report,* Iteris, June 11, 2021

---

[11] 207 dwelling units x 4.41 (average persons per household) = 912.87 residents = 913 residents

[12] SCAG 2040 Household estimate for South El Monte = 5,200 households
Housing units in SCAG projections are estimated based on number of households and a healthy vacancy rate of 5.0 percent: 0.05 (vacancy rate) x 5,200 households (SCAG 2040 estimate) = 4,940 housing units in 2040.

Would the project:

	Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?		X		
b)	Conflict or be inconsistent with CEQA Guidelines § 15064.3, subdivision (b)?			X	
c)	Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			X	
d)	Result in inadequate emergency access?			X	

a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Less Than Significant Impact with Mitigation Incorporated. Under baseline conditions, the project site was not in operation as a swap meet and generated no daily vehicle trips. The proposed project would generate 1,874 daily trips with 143 trips in the AM peak hour and 189 trips in the PM peak hour, based on the ITE Trip General Manual 10th edition.

The proposed signalized intersection at the project driveway on Rosemead Boulevard would be consistent with Policy 2.2 of the Circulation Element, "Support Caltrans efforts to facilitate smooth traffic flow along Rosemead Boulevard." A traffic signal at this intersection would regulate traffic flow in the project area.

The proposed project would be consistent with the Circulation Element's Policy 2.3, "Support efforts of the Los Angeles County Metropolitan Transportation Authority to increase the use of mass transit and other alternatives to the private automobile as a way to reduce traffic loads on State Route 60," since the project site is adjacent to the Rosemead/Fern Metro Bus Lines 176 and 266 stop and is approximately 1,500 feet (0.28 mile) from the Garvey/Rosemead Stop on Metro Bus Line 70. The frequency of Metro Bus Line is 15 minutes or less in peak hours and is considered to operate in a high-quality transit area (HQTA Additionally, the proposed project would construct a traffic signal at the intersection of Rosemead Boulevard and the project site's entrance, which would allow for crossing between the northbound or southbound Metro Bus Lines 176 and 266 stops.

The proposed project would not modify pedestrian facilities with the exception of a new crosswalk at the proposed signalized intersection. Future pedestrian circulation would be provided throughout the project site by a network of walkways along the internal drives and open space areas, which would connect to the existing City sidewalks along Rosemead Boulevard and Chico Avenue (see Figure 5, *Circulation Plan*).

The 2000 General Plan identified a bikeway network in the City of South El Monte that did not include any roadways near the project site. The South El Monte Recommended Bikeway Network in the City's section of

3. Environmental Analysis

the San Gabriel Valley Bicycle Master Plan includes proposed Class II bicycle lanes on Rosemead Boulevard, Garvey Avenue, Rush Street, and Potrero Avenue within the City limits (south of Kale Street). The implementation of the proposed project would not modify existing bicycle facilities.

Despite traffic along Chico Avenue being uncontrolled, there is no advanced-warning signage alerting drivers to the presence of the Chico Avenue and Fern Street intersection, which provides a marked crosswalk on the north leg of the intersection crossing Chico Avenue and an unmarked crossing, denoted by curb ramps, on the east leg of the intersection crossing Fern Street. In addition, the curb ramps are not aligned with the crosswalk and require pedestrians using the curb ramps to step into the intersection outside of the crosswalk, reducing the safety of the location. The safety condition of the location could be impacted by the proposed project's additional residents utilizing the crossing, in conflict with the Circulation Element traffic safety goal of a transportation network to provide personal safety for motorists and pedestrians at intersections and roadways throughout the City. To address this potentially significant impact, Mitigation Measure T-1, which states that California Manual on Uniform Traffic Control Devices (MUTCD) Pedestrian W11-2 signs should be installed at least 150 feet upstream from the crosswalk in both directions as well as at the crosswalk itself, the crosswalk should be repainted to ensure high visibility, and the curb ramps on Chico Avenue be realigned with the crosswalk itself, would reduce impacts to less than significant.

Mitigation Measures

T-1 Prior to the issuance of an occupancy permit, the applicant shall enhance the pedestrian crossing at the Chico Avenue/Fern Street intersection as follows:

- Install pedestrian crossing signs at least 150 feet ahead of the crosswalk in both directions as well as at the crosswalk itself pursuant to California Manual on Uniform Traffic Control Devices (MUTCD) Pedestrian W11-2.
- Repaint the crosswalk to ensure high visibility.
- Realign the curb ramps with the crosswalk.

b) Conflict or be inconsistent with CEQA Guidelines § 15064.3, subdivision (b)?

Less Than Significant Impact. CEQA analysis for determining potential significant transportation impacts from vehicle traffic transitioned from an automobile delay or capacity measure to a Vehicle Miles Traveled (VMT) of automobiles and light trucks metric in July 2020, as required by Senate Bill (SB) 743. VMT is an area-wide performance measure which helps compare the overall performance of a project or project alternatives and is also used as a metric to ultimately assess the transportation environmental impacts of a project. VMT analysis shifts the focus towards impacts caused by the distance traveled by vehicles rather than the localized congestion created by vehicles (i.e., intersection-level delay). VMT is generally calculated using a travel demand model that captures the movement of all trips over a highway network. Analysis is limited to automobile travel (automobiles and light-trucks) and excludes heavy trucks.

The City of South El Monte prepared City of South El Monte Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment (October 2020) that provide technical guidance regarding

assessment of VMT, thresholds of significance, and mitigation measures for land development and transportation projects in the unincorporated area.

The proposed project would add housing in a predominately commercial and industrial area that is well-served by public transportation, thereby diversifying the land use types and contributing to a reduction in vehicle miles traveled per capita.

The proposed project was analyzed using the San Gabriel Valley Council of Governments Vehicle Miles Traveled Evaluation Tool for the three Project parcels (APNs: 8102-037-020, 8102-037-022, 8102-037-024) in traffic analysis zone (TAZ) 22195100. The proposed project is not located in a Transit Priority Area and would have a project generated VMT rate of 12.67 home-based VMT per capita. When compared to the City VMT baseline value of 15.75 home-based VMT per capita and the 15.0 percent below baseline significance value of 13.39, the proposed Project is presumed to have a less than significant impact.

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less Than Significant Impact. The proposed project would not increase traffic hazards or create incompatible uses. The proposed project signalized intersection at the Rosemead Boulevard driveway and the new driveway on Chico Avenue would be designed to meet the City of South El Monte and Caltrans' standards and specifications, and therefore would not increase geometric design hazards.

d) Result in inadequate emergency access?

Less Than Significant Impact. The current site entrance driveway at Rosemead Boulevard would not be altered and the new driveway on Chico Street would be constructed to meet standards and specifications to allow for ambulance and fire vehicle access. A traffic control plan and parking and driveway plan would be submitted to the City of South El Monte for review and approval prior to any temporary construction period lane or road closures. Impacts would be less than significant.

3.16 PUBLIC SERVICES

The analysis in this section is based in part on the following service-provider questionnaire responses and conditions of approval. These documents are included as Appendix I:

- *Proposed Starlite Residential Development Police Questionnaire,* Tracy Jue, Director, Facilities Planning Bureau, February 18, 2021
- *County of Los Angeles Fire Department Final Map Requirements (Conditions of Approval),* project review by Claudia Soiza, June 16, 2021

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

3. Environmental Analysis

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
a) Fire protection?			X	
b) Police protection?			X	
c) Schools?			X	
d) Parks?			X	
e) Other public facilities?			X	

a) Fire protection?

Less Than Significant According to the City's General Plan Public Safety Element, fire response and prevention services are provided by the Los Angeles County Fire Department. The City's contract with the Los Angeles County Fire Department is reviewed annually to ensure adequate fire protection services are provided.

The nearest fire station is Station 90, approximately 0.72 mile southeast of the project site. Los Angeles County Fire Department maintains a policy of responding to fires within five minutes from notification, which is acknowledged by the National Fire Protection Association.

The proposed project and improvements will require site plan review for consistency with the City's Public Safety Element and Los Angeles County Fire Department requirements. Upon development and operation, the project will contribute to the City's General Fund through property taxes, and the General Fund pays for the City's contract with County Fire. Any facility expansion or additional personnel needs generated by the development will be reflected in the annual review of the City's contract with the Los Angeles County Fire Department. Expansion or any requirement for new facilities (stations) would be speculative, but would also require environmental review under CEQA. Therefore, impacts would be less than significant.

b) Police protection?

Less Than Significant Impact. The project site is within the service area of the Los Angeles County Sheriff Department's (LASD) Temple Station at 8838 Las Tunas Drive in Temple City, approximately 3.1 miles north of the project site. The station provides community services such as organized Neighborhood Watch meetings. LASD recommends that the general principles of Crime Prevention Through Environmental Design be implemented in the design phase.

The LASD does not have a current standard law enforcement service ratio because staffing level needs vary from station to station due to criteria such as service call volume and type, patrol and travel time by priority,

personnel workload and performance levels, and modeling the flow of calls for service ratios. The station's average or anticipated response times for emergent, priority, and routine calls for service received from the proposed project are 6, 20, and 60 minutes,[13] respectively. The LASD generally adheres to the following industry standard among law enforcement agencies for responses categorized as emergent, priority, and routine calls for service: 10, 20, and 60 minutes, respectively.

The station's desired law enforcement service ratio is 1 deputy for every 1,000 residents. The station is currently staffed by 190 sworn personnel and 48 civilian employees. The station services the following areas: Chantry Flats, Monrovia-Arcadia-Duarte, City of Bradbury, City of Duarte, City of Rosemead, City of South El Monte, Temple City, North San Gabriel/East Pasadena, and South San Gabriel. The estimated population for the station's service area is approximately 230,389, which would require 230 deputies.

At 190 deputies, the station is currently understaffed; however, assigning additional personnel to the station would exacerbate the current shortage of facility space and supporting equipment. As indicated above, the proposed project is expected to generate 913 residents, and therefore the project would generate the demand for an additional deputy. If the station were to be expanded in the future, the expansion would be required to undergo the applicable CEQA process which would provide mitigation, if required. According to the City's General Plan, the City's contract with the LASD is reviewed to ensure that the City is receiving the appropriate level of response service and crime prevention. The contract, which is updated annually, is funded by the City's General Fund, and includes funding for departmental supplies. The proposed project would pay into the General Fund, which would fund services for the LASD. Impacts would be less than significant.

c) Schools?

Less Than Significant Impact. The proposed project would result in the construction of 207 dwelling units. The proposed project would result in an increase of approximately 913 residents in the City of South El Monte. Potrero Elementary School and South El Monte High School in the El Monte City School District and El Monte Union High School District, respectively, would serve the proposed project. For the 2020-2021 enrollment year, Potrero Elementary School, which serves kindergarten through eighth-grade students, had an enrollment of 782 students, and South El Monte High School, which serves ninth- through twelfth-grade students, had an enrollment of 1,261 students (CDE 2021).

Table 17, *Estimated Project Student Generation,* shows the total enrollment for El Monte City School District and El Monte Union High School District and the project's estimated student generation.

[13] These are approximate time ranges only and could be affected by traffic conditions. Response times are variable because the responding unit may be elsewhere within the station's service area and not necessarily dispatched from the station itself.

3. Environmental Analysis

Table 17 Estimated Project Student Generation

	Enrollment 2019-2020[1]	Student Generation[2]	Estimated Project Student Generation
El Monte City School District	7,921	0.5[3]	457
El Monte Union High School District	8,299	0.2	183
Total	16,220	0.7	640

Sources and notes:
1 CDE 2021
2 El Monte 2011.
3 Elementary school generation rate (0.4) + Middle school generation rate (0.1)

As shown on Table 17, the proposed project would generate approximately 640 students. Individual projects in the City of South El Monte would be required to pay school impact fees under Government Code Section 65995. School fees levied by school districts under Senate Bill 50 (SB 50) are defined as comprising full mitigation for a project's impacts on public schools. Therefore, impacts would be less than significant.

d) Parks?

Less Than Significant Impact. According to the Resources Element of the City's General Plan, the city has one City-owned park (Mary Van Dyke Park) and three joint-use parks (New Temple Park, Dean Shively Park/School, and Potrero School), which totals to 636 acres. Whittier Narrows Regional Park is a 1,092-acre County-operated park that is south of the city. The City's goal is to provide a ratio of approximately 2 acres of parkland per 1,000 city residents, according to the Resources Element of the General Plan. Including Whittier Narrows Regional Park, the city has approximately 1,728 acres of parkland (South El Monte 2000).

The City currently requires 42.4 acres to meet the demand for parklands for the existing population of 21,204 residents. With the existing 636 acres of parkland, the City exceeds the minimum standard by approximately 594 acres. Using the City's parkland ratio of 2 acres of parkland per 1,000 residents, the proposed project would create a demand for 1.83 acres of parkland. With the implementation of the proposed project, the City's minimum parkland standard would be exceeded by 591 acres.

Additionally, Section 16.36.015, Park Land Dedications and Fees, of the South El Monte Municipal Code, requires that every person who constructs dwelling units or subdivides land for residential purposes pay a fee or dedicate land for parks. The proposed project would provide 140,080 square feet of landscaped areas, and the proposed Specific Plan provides landscape and open space guidelines. As indicated in the Specific Plan, the recreational center would include a pool and recreation building, open lawn area, and a community recreation area. Therefore, project implementation would result in a less than significant impact because the City exceeds the minimum standard for parkland, and the applicant would be required to pay parkland dedication fees.

e) Other public facilities?

Less Than Significant Impact. The only library in the City of South El Monte, South El Monte Library, is approximately 1.2 miles southeast of the project site. It is part of the Los Angeles County Library system that serves 49 of the 88 cities. The Los Angeles County Library guidelines recommend a minimum of 0.5 square foot per capita (Los Angeles County 2014). The South El Monte Library is 6,416 square feet (Los Angeles

County 2021). With the existing population of 21,204, there would be a need for 10,602 square feet of library space. Therefore, there is currently a deficiency of 4,186 square feet in library space.

Based on the recommended standard, the 913 residents of the project would generate the need for 456 square feet of library space, which would increase the existing deficiency to 4,642 square feet. The Los Angeles County Library also provides a wide range of electronic and digitized resources that do not require physical library space.

The LA County Library is a special fund department under the jurisdiction of the County Board of Supervisors. It is financed primarily by a dedicated share of property tax from the service areas, with other revenues including general fund contribution, a parcel tax, grants, and fees. The proposed project would generate its proportionate share of library funding through these mechanisms, and therefore, would not result in a significant impact.

3.17 RECREATION

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?			X	
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?			X	

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities, such that substantial physical deterioration of the facility would occur or be accelerated?

Less Than Significant Impact. Project development would create a demand for 1.83 acres of park space in the City of South El Monte. However, as substantiated above, the City of South El Monte would exceed the minimum parkland standard by 591 acres with project implementation. The Mary Van Dyke park is approximately 0.9 mile southeast of the site. The proposed project would include 140,080 square feet of landscaped areas. Additionally, the proposed Specific Plan would provide guidelines for landscape and open space. The recreation center would include various features, including but not limited to a pool and recreation building, open-play lawn, and community recreation area. Therefore, the proposed project would have a less than significant impact on neighborhood and regional parks and other recreational facilities in the City.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

Less Than Significant Impact. The proposed project would include approximately 140,080 square feet of landscaped areas, and would include recreational facilities. The construction associated with landscaped areas

and recreational facilities are included as part of the project site's development. The construction or expansion of such areas would not result in an adverse physical effect on the environment beyond those analyzed for the overall development of the project in this Initial Study/Mitigated Negative Declaration. Therefore, impacts would be less than significant.

3.18 TRIBAL CULTURAL RESOURCES

The analysis in this section is based in part on the following technical study:

- *Cultural and Paleontological Resources Assessment for the Starlite Residential Project,* Cogstone, May 2021 (Appendix C-a)

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or			X	
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code § 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.		X		

a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or

Less Than Significant Impact. As stated in Section 3.5(a), the Starlite Drive-in sign is eligible for listing under CRHR Criteria 1 and 3. However, the sign is not attributed to Native American tribes, and therefore, impacts would be less than significant.

ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

No Impact. Less Than Significant Impact. Less Than Significant Impact With Mitigation Incorporated. A Sacred Lands File (SLF) search was requested from the Native American Heritage Commission on February 12, 2021, and it indicated that there are sacred lands or resources known within the project area (Cogstone 2021, Appendix C-a). The NAHC recommended that eight representatives from local Native American tribes be contacted for further information. In accordance with SB 18 and AB 52, the City informed the tribes of the proposed project, and consulted with the Gabrieleno Band of Mission Indians–Kizh Nation on June 3, 2021. The tribe requested mitigation to reduce potential impacts to tribal cultural resources. Since the proposed project would require ground-disturbing activities, Mitigation Measure TCR-1 through Mitigation Measure TCR-3 would be implemented to ensure potential impacts to tribal cultural resources are reduced to a less than significant level.

Mitigation Measures

TCR-1 **Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities.**

- The project applicant/lead agency shall retain a Native American monitor from (or approved by) the Gabrieleño Band of Mission Indians – Kizh Nation (the "Kizh" or the "Tribe") - the direct lineal descendants of the project location. The monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project, at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground-disturbing activity" includes, but is not limited to, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.
- A copy of the executed monitoring agreement shall be provided to the lead agency prior to the earlier of the commencement of any ground-disturbing activity for the project, or the issuance of any permit necessary to commence a ground-disturbing activity.
- The project applicant/developer shall provide the Tribe with a minimum of 30 days advance written notice of the commencement of any project ground-disturbing activity so that the Tribe has sufficient time to secure and schedule a monitor for the project.
- The project applicant/developer shall hold at least one (1) pre-construction sensitivity/educational meeting prior to the commencement of any ground-disturbing activities, where at a senior member of the Tribe will inform and educate the project's construction and managerial crew and staff members (including any project subcontractors and consultants) about the TCR mitigation measures and compliance

3. Environmental Analysis

obligations, as well as places of significance located on the project site (if any), the appearance of potential TCRs, and other informational and operational guidance to aid in the project's compliance with the TCR mitigation measures.

- The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request.
- Native American monitoring for the project shall conclude upon the latter of the following: (1) written confirmation from a designated project point of contact to the Tribe that all ground-disturbing activities and all phases that may involve ground-disturbing activities on the project site and at any off-site project location are complete; or (2) written notice by the Tribe to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase (known by the Tribe at that time) at the project site and at any off-site project location possesses the potential to impact TCRs.

TCR-2 **Discovery of TCRs, Human Remains, and/or Grave Goods.**

- Upon the discovery of a TCR, all construction activities in the immediate vicinity of the discovery (i.e., not less than the surrounding 50 feet) shall cease. The Tribe shall be immediately informed of the discovery, and a Kizh monitor and/or Kizh archaeologist will promptly report to the location of the discovery to evaluate the TCR and advise the project manager regarding the matter, protocol, and any mitigating requirements. No project construction activities shall resume in the surrounding 50 feet of the discovered TCR unless and until the Tribe has completed its assessment/evaluation/recovery of the discovered TCR and surveyed the surrounding area.
- The Tribe will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate in its sole discretion, and for any purpose the Tribe deems appropriate, including but not limited to, educational, cultural and/or historic purposes.
- If Native American human remains and/or grave goods are discovered or recognized on the project site or at any off-site project location, then all construction activities shall immediately cease. Native American "human remains" are defined to include "an inhumation or cremation, and in any state of decomposition or skeletal completeness." (Pub. Res. Code § 5097.98 (d)(1).) Funerary objects, referred to as "associated grave goods," shall be treated in the same manner and with the same dignity and respect as human remains. (Pub. Res. Code § 5097.98 (a), d)(1) and (2).)

- Any discoveries of human skeletal material or human remains shall be immediately reported to the County Coroner (Health & Safety Code § 7050.5(c); 14 Cal. Code Regs. § 15064.5(e)(1)(B)), and all ground-disturbing project ground-disturbing activities on site and in any other area where the presence of human remains and/or grave goods are suspected to be present, shall immediately halt and remain halted until the coroner has determined the nature of the remains. (14 Cal. Code Regs. §15064.5(e).) If the coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, within 24 hours, the Native American Heritage Commission, and Public Resources Code Section 5097.98 shall be followed.
- Thereafter, construction activities may resume in other parts of the project site at a minimum of 200 feet away from discovered human remains and/or grave goods, if the Tribe determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (along with any other mitigation measures the Tribal monitor and/or archaeologist deems necessary). (14 Cal. Code Regs. § 15064.5(f).)
- Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or grave goods.
- Any historic archaeological material that is not Native American in origin (non-TCRs) shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.
- Any discovery of human remains and/or grave goods discovered and/or recovered shall be kept confidential to prevent further disturbance.

TCR-3 **Procedures for Burials, Funerary Remains, and Grave Goods.**

- As the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy shall be implemented for all discovered Native American human remains and/or grave goods. Tribal Traditions include, but are not limited to, the preparation of the soil for burial, the burial of funerary objects and/or the deceased, and the ceremonial burning of human remains.
- If the discovery of human remains includes four (4) or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created.
- The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated "grave goods" (aka, burial goods or funerary objects) are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later, as well as other items made exclusively for burial purposes or to contain human

3. Environmental Analysis

remains. Cremations will either be removed in bulk or by means necessary to ensure complete recovery of all sacred materials.

- In the case where discovered human remains cannot be fully recovered (and documented) on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to divert the project while keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed.
- In the event preservation in place is not possible despite good faith efforts by the project applicant/developer and/or landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects. The site of reburial/repatriation shall be agreed upon by the Tribe and the landowner, and shall be protected in perpetuity.
- Each occurrence of human remains and associated grave goods will be stored using opaque cloth bags. All human remains, grave goods, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items will be retained and shall be reburied within six months of recovery.
- The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the NAHC. The Tribe does NOT authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.

3.19 UTILITIES AND SERVICE SYSTEMS

Would the project:

	Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?			X	
b)	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?			X	
c)	Result in a determination by the waste water treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			X	
d)	Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?			X	
e)	Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?				X

b) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Less Than Significant Impact. Following is a discussion of the proposed project's potential impacts on water facilities, wastewater treatment, stormwater drainage, electric power infrastructure, natural gas facilities, and telecommunications infrastructure. The proposed project would replace the recently closed swap meet and includes one single-family home in the northeast corner of the site. Therefore, the existing water demand, wastewater disposal need, solid waste generation, and electricity and natural gas consumption are negligible.

Water Supply Facilities

The SGVWC would provide potable water to the project site. SGVWC's current service area covers approximately 45 square miles, which includes all or portions of the cities of Arcadia, Baldwin Park, El Monte, Industry, Irwindale, La Puente, Montebello, Monterey Park, Pico Rivera, Rosemead, San Gabriel, Santa Fe Springs, South El Monte, West Covina, and Whittier and unincorporated areas of Los Angeles County including Hacienda Heights and South San Gabriel. The water company's main water supply source is groundwater from the Main San Gabriel Basin (Main Basin). Other sources include groundwater from the Coastal Plain of Los Angeles Central Basin, recycled water, and imported treated water from the MWD. Groundwater from the Main Basin has historically accounted for approximately 90.0 percent of SGVWC's water supply. Since 2007 the use of recycled water has averaged about 6.0 percent of water supplies, decreasing the need for groundwater from

3. Environmental Analysis

the Central Basin and eliminating the need for water supplies from MWD. MWD supplies are still available to SGVWC as an emergency water supply source if needed (SGVWC 2017).

SGVWC pumps groundwater from the Main Basin from 30 active wells that have a combined capacity of about 57,300 gallons per minute (gpm). Additionally, the water company pumps groundwater from the Central Basin from three active wells with a combined capacity of about 6,700 gpm. Furthermore, the water company provides recycled water for nonpotable irrigation use. Recycled water supply is produced by the Sanitation Districts of Los Angeles County's San Jose Creek Water Reclamation Plant and Whittier Narrows Water Reclamation Plant. Recycled water deliveries averaged approximately 2,200 afy from 2011 to 2015. SGVWC can also supply up to 6,735 gpm from MWD's Middle Feeder. The water company has not experienced water supply constraints or deficiencies and groundwater supplies are managed based on adjudications. The 2015 Urban Water Management Plan indicates that water demands can be met during normal, single dry, and multiple dry years over the next 20 years.

Water demand estimates for the proposed project are included in Table 18, *Proposed Project Water Demands*. As shown in the table, the proposed project would require approximately 42,964 gallons per day (48.1 afy) of potable water.

Table 18 Proposed Project Water Demands

Land Use	Dwelling Units/ Square Footage	Generation Rate	Total (gpd)
Multifamily Residential	207du	172 gpd/du[1]	35,604
Pool	9,000 SF	0.01 gpd/SF	894
Landscaping	146,927 SF[2]	—	6,466[3]
Total	—	—	**42,964**

Source: LACSD 2019; DWR 2017; Forma 2021; CAPCOA 2017.
Notes: gpd = gallons per day, SF = square feet, du = dwelling units
1 LACSD provides loading rates for wastewater for specific land uses. It is assumed that wastewater generation is 90.0 percent of indoor water use. The wastewater generation rate for residential developments with five units or more is 156 gpd/dwelling unit.
2 The landscaped area is assumed to be the sum of the square footage for private enclosed yards and the square footage for the common open space landscaped areas.
3 Water use for landscaping is based on the California Department of Water Resources' Water Budget Workbook for New and Rehabilitated Residential Landscapes. Precipitation for the City of Los Angeles was used.

SGVWC's water demand for the year 2020 was approximately 35,100 afy which is projected to increase to approximately 45,450 in the year 2040. The proposed project's annual water demand accounts for approximately 0.1 percent of SGVWC's current annual demand, which is minimal in comparison the water company's total demand. Furthermore, SGVWC estimates that it will have sufficient water supplies to meet proposed growth for normal, single-dry, and multiple-dry years. Therefore, the proposed project development would not require the construction of new or expanded water supply or treatment facilities. Impacts would be less than significant, and no mitigation measures are necessary.

Wastewater Treatment Facilities

Wastewater generated by the land uses in the City is treated by LACSD. Wastewater is collected within the City's local sewer collection system. The City's local sewers tie into one of LACSD's regional trunk sewers. Wastewater

from the City's service area is collected and treated at the Whittier Narrows Water Reclamation Plant (WNWRP). The WNWRP is a tertiary wastewater treatment plant located at 301 North Rosemead Boulevard, El Monte, and currently receives wastewater from Alhambra, Arcadia, Azusa, Bradbury, City of Industry, Duarte, El Monte, Glendale, Irwindale, La Cañada Flintridge, Los Angeles, Monrovia, Monterey Park, Pasadena, Rosemead, San Gabriel, San Marino, Sierra Madre, South El Monte, South Pasadena, and Temple City. The plant has a design capacity of 15 million gallons per day (mgd) (LARWQCB 2014).

The amount of wastewater that would be generated by the proposed project is conservatively assumed to be 34,673 gpd. This value is calculated by adding the indoor water use to the water demand for the outdoor pool and multiplying by 95.0 percent to account for system losses. The amount of wastewater that would be generated is less than 1.0 percent of the WNWRP's treatment capacity. Therefore, the proposed project would not require the construction of new or expanded wastewater treatment facilities. Impacts would be less than significant, and no mitigation measures are necessary.

Stormwater Drainage Facilities

See response to Section 3.10.c.iii. As substantiated in this section, impacts would be less than significant, and no mitigation measures are necessary.

Electricity Facilities

Electrical needs for the project site would be provided by SCE via existing infrastructure in the immediate area of the project site. SCE obtains electricity from conventional and renewable sources. The proposed project would have a total annual electricity demand of 1,577,002 kWh (see Appendix B).

Total mid-electricity consumption in SCE's service area is forecast to increase by approximately 10,000 GWh between 2018 and 2030 (CEC 2018). SCE forecasts that it will have sufficient electricity supplies to meet demands in its service area; and the electricity demand due to the project is within the forecast increase in SCE's electricity demands. Project development would not require SCE to obtain new or expanded electricity supplies.

Additionally, the proposed project would be designed using green building practices, including those of the most current Building Energy Efficiency Standards (Title 24, California Code of Regulations, Part 6) and California Green Building Standards Code (CALGreen: Title 24, California Code of Regulations, Part 11). Both standards contain energy efficiency requirements for newly constructed buildings.

Therefore, impacts would be less than significant, and no mitigation measures are necessary.

Natural Gas Facilities

Natural gas needs to the project site would be provided by the Southern California Gas Company (SoCalGas) via existing infrastructure in the immediate area of the project site. The proposed project would have a total annual natural gas demand of 4,954,623 kBTU (see Appendix B).

SoCalGas' service area spans much of the southern half of California, from Imperial County on the southeast to San Luis Obispo County on the northwest, to part of Fresno County on the north, to Riverside County and

3. Environmental Analysis

most of San Bernardino County on the east (CEC 2016). Total natural gas supplies available to SoCalGas are forecast to remain at 3,175 million cubic feet per day (MMCF/day) from 2020 through 2022, then increase to 3,435 MMCF/day from 2024 to 2035. Total natural gas consumption in SoCalGas's service area is forecast to decline slightly from 2,462 MMCF/day in 2020 to 2,103 MMCF/day in 2035 (CGEU 2018).

SoCalGas projects that it will have sufficient supplies to meet the demands in its service area. Therefore, the proposed project's natural gas demand is within SoCalGas's forecast increase, and the proposed project would not require SoCalGas to obtain new or expanded natural gas supplies. Impacts would be less than significant, and no mitigation measures are necessary.

Telecommunication Facilities

The proposed project would include on-site connections to telecommunication services. The construction-related impacts associated with these improvements are analyzed throughout this Initial Study as part of project development. Impacts would be less than significant, and no mitigation measures are necessary.

c) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Less Than Significant Impact. SGVWC has adequate water supplies to meet project water demands, as substantiated above in Section 3.19.a.

The proposed project's landscaping would be installed and maintained in compliance with Chapter 17.25, Water Efficient Landscaping, of the South El Monte Municipal Code, which sets landscape design standards for water conservation. The proposed project would also implement the requirements of Chapter 8.46, Water Conservation. The purpose of this chapter is to establish water conservation measures, ensure reasonable and beneficial use of water, prevent waste of water, and maximize the efficient use of water in South El Monte to avoid and minimize the effects of drought on city residents and businesses.

Furthermore, development of the proposed project would be required to comply with the provisions of CALGreen, which contains requirements for indoor water use reduction and site irrigation conservation. Specifically, project development would be required to adhere to mandatory residential measures in Division 4.3, Water Efficiency and Conservation, of CALGreen, including Sections 4.303, Indoor Water Use, and 4.304, Outdoor Water Use.

Based on the preceding, there are adequate water supplies to meet the water demands of the proposed project, and project development would not require SGVWC to obtain new or expanded water supplies. Therefore, impacts on water supplies due to project development would be less than significant, and no mitigation measures are necessary.

d) Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less Than Significant Impact. As substantiated in Section 3.19.a, there is existing wastewater treatment capacity in the region for estimated project wastewater generation. Project development would not require construction of new or expanded wastewater treatment facilities. Therefore, impacts would be less than significant, and no mitigation measures are necessary.

e) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less Than Significant Impact. Athens Services hauls residential solid waste from South El Monte. In 2019, approximately 61.0 percent of the municipal solid waste landfilled from South El Monte was disposed of at the Mid-Valley Sanitary Landfill. The San Timoteo Sanitary Landfill received 20.0 percent of the waste in the same year (CalRecycle 2019a). Capacity and disposal data for these two landfills are shown in Table 19, *Landfill Capacity*. As shown in the table, the landfills have a combined residual capacity of 4,860 tons per day.

Table 19 Landfill Capacity

Landfill	Current Remaining Capacity (tons)[1]	Maximum Daily Disposal Capacity (tons/day)	Average Daily Disposal, 2017 (tons)[2]	Residual Daily Disposal Capacity (tons)	Estimated Close Date
Mid-Valley Sanitary Landfill	61,219,377	7,500	3,718	3,782	2045
San Timoteo Sanitary Landfill	12,360,396	2,000	922	1,078	2039
Total	73,579,773	9,500	4,640	4,860	NA

Sources: CalRecycle 2019b, 2019c, 2019d.
1 A Volume-to-Weight conversion rate of 2,000 lbs/cubic yard (1 ton/cubic yard) for "Compacted - MSW Large Landfill with Best Management Practices" is used as per CalRecycle's 2016 Volume-to-Weight Conversion Factors https://www.epa.gov/sites/production/files/201604/documents/volume_to_weight_conversion_factors_memorandum_04192016_508fnl.pdf.
2 Average daily disposal is calculated based on 300 operating days per year. The two facilities are open six days per week, Monday through Saturday, except certain holidays.

The proposed project is estimated to generate approximately 1,772 pounds (or 0.89 ton) of solid waste per day, as shown in Table 20, *Proposed Project Solid Waste Generation*.

Table 20 Proposed Project Solid Waste Generation

Land Use	Dwelling Unit	Generation Rate (lbs/dwelling unit/day)	Total (lbs/day)
Residential Use	207	8.6	1,780

Source: CalRecycle 2019e.
Notes: ppd = pounds per day

As demonstrated in Tables 19 and 20, the total amount of solid waste expected to be generated by the proposed project would be minimal compared to the residual daily disposal capacity of the two main landfills serving the city.

3. Environmental Analysis

Furthermore, substantial reductions in solid waste from construction materials can be achieved through recycling, reuse, and diversion programs. CALGreen Section 4.408 requires diversion of 65.0 percent of nonhazardous construction and demolition waste through recycling, reuse, and diversion programs. Chapter 13.12, Article X, Recycling of Construction and Demolition Debris, of the City's municipal code requires that construction contractors develop and submit a plan to recycle and salvage the projected construction and demolition debris prior to receiving a permit from the city for any construction activities.

Based on the preceding, impacts on landfill capacity would be less than significant, and no mitigation measures are necessary.

f) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

No Impact. See response to section 3.19.d, above.

Additionally, the following federal, State, and local laws and regulations govern solid waste disposal:

- USEPA's Resource Conservation and Recovery Act of 1976 and the Solid Waste Disposal Act of 1965, which govern solid waste disposal.
- Assembly Bill (AB) 341 (Chapter 476, Statutes of 2011) which increases the statewide waste diversion goal to 75.0 percent by 2020, and mandates recycling for commercial and multifamily residential land uses.
- AB 939 (Integrated Solid Waste Management Act of 1989; Public Resources Code 40050 et seq.), which required every California city and county to divert 50.0 percent of its waste from landfills by the year 2000 by such means as recycling, source reduction, and composting. In addition, AB 939 required each county to prepare a countywide siting element specifying areas for transformation or disposal sites to provide capacity for solid waste generated in the county that cannot be reduced or recycled for a 15-year period.
- AB 1327 (California Solid Waste Reuse and Recycling Access Act of 1991), which requires local agencies to adopt ordinances mandating the use of recyclable materials in development projects.

Project-related construction and operation phases would be implemented in accordance with all applicable federal, State, and local laws and regulations that govern solid waste disposal. Therefore, no impact would occur and no mitigation measures are necessary.

3.20 WILDFIRE

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones (FHSZ), would the project:

	Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Substantially impair an adopted emergency response plan or emergency evacuation plan?			X	
b)	Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?			X	
c)	Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?			X	
d)	Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?			X	

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact. The proposed project would not conflict with adopted emergency response or evacuation plans. The surrounding roadways would continue to provide emergency access to the project area and surrounding properties during construction and postconstruction. An additional entry would be created off of Chico Avenue and would provide access to the site from the eastern boundary. The proposed project would not result in inadequate emergency access, and impacts to adopted emergency response and evacuation plans are less than significant.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Less Than Significant Impact. There are three primary factors used in assessing wildfire hazards—topography, weather, and fuel. The project site is relatively flat and is in an urbanized environment. The proposed project would not impact weather or topography. At project completion, the project site would consist of 207 dwelling units (408,104 square feet), and 140,080 square feet of landscaped areas. According to CAL FIRE's Fire and Resource Assessment Program, the project area is not in a Very High FHSZ (CAL FIRE 2021). Therefore, impacts of exposing project occupants to pollutant concentrations from or exacerbating a wildfire would be less than significant.

3. Environmental Analysis

c) **Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?**

Less Than Significant Impact. The proposed project would require utility connections and new infrastructure for electricity, natural gas, telecommunications, and cable service. As indicated above, the project site is not in a very high FHSZ. The project site is in a highly urbanized part of the city; the proposed project would not add infrastructure such as roads or overhead power lines in areas with wildland vegetation. Therefore, impacts of exacerbating fire risks on the environment would be less than significant.

d) **Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?**

Less Than Significant Impact. The project site is relatively flat. The project site is not in an area designated as having a potential for landslides and is not in a 100-year flood hazard zone (FEMA 2008). Therefore, it is unlikely that the site would be susceptible to downslope or downstream flooding or landslides as a result of post-fire slope instability. The project site is not in a very high FHSZ. Impacts would be less than significant.

3.21 MANDATORY FINDINGS OF SIGNIFICANCE

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?		X		
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)			X	
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?			X	

a) **Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially**

reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Less Than Significant Impact With Mitigation Incorporated. The project site is in an urban setting, surrounded by development. The project site is paved and vacant except for a structure at the northeast corner of the site. Project development would not degrade the quality of the environment or reduce the population, range, or habitat of a species of fish or wildlife or a rare or endangered plant or animal species. The proposed project would impact the Starlite Drive-in sign, which is recommended individually eligible for listing in CRHR under Criterion 3. With the implementation of Mitigation Measures CUL-1, CUL-2, and CUL-3, impacts to historical resources would be reduced to less than significant.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)

Less Than Significant Impact. The proposed project would consist of the construction of 207 dwelling units on the project site. As the proposed project would be within the SCAG growth forecasts for the city, the proposed project would not result in cumulative impacts.

c) Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?

Less Than Significant Impact. The proposed project would increase the number of dwelling units in the City by 207 units. As demonstrated in this Initial Study, the proposed project would not substantially increase environmental effects that would directly or indirectly affect human beings. Impacts would be less than significant.

1
INTRODUCTION

1.1 Purpose and Objective of the Specific Plan

The Starlite Specific Plan provides a detailed description of the proposed land use, infrastructure, and implementation requirements for the Starlite project located on State Route 19 (SR-19)/Rosemead Boulevard in the City of South El Monte, California. The Specific Plan will be processed through the City of South El Monte, California. The Design Guidelines contained in this Specific Plan will assist in creating a sense of place and high-quality development on the project site. The Development Regulations will establish permitted uses, building setbacks, and general development criteria.

The Starlite Specific Plan is consistent with the applicable goals and policies of the City of South El Monte General Plan. The provisions and regulations contained in the Specific Plan shall apply to the Starlite project area, and shall prevail in instances of conflict with the provisions and regulations of the South El Monte Municipal Code (SEMMC) that regulate the same subject matter. Where the Specific Plan is silent on an issue, the regulations and standards contained in the SEMMC or other applicable city, state or federal code that regulate the same issue shall apply.

The Specific Plan area is located at the former Starlite swap meet site in the industrial suburb of South El Monte. Opened in the 1950s, the all year operating theater parking lot accommodated up to 860 vehicles. The drive-in was a culture-changing phenomenon on a large property open to the public after dark. The theatre parking lot was simultaneously used for a daytime outdoor swap meet shortly after its opening. After the closure of the drive-in theater in 1997, the site continued to be used for weekend swap meets. On any given weekend day vendors began arriving at the break of dawn, driving their packed vehicles through the swap meet's main entrance. The theater and swap meet offered entertainment at night and a business venue during the day.

Today, the Starlite swap meet is permanently closed. A new residential development is proposed on the site. The Starlite Specific Plan will enhance the community character and implement a vision that maximizes the site's future potential, and contributes toward the City's objective to meet the State of California's housing production goals.

Existing Site Photo

This Specific Plan is an implementation tool that:

- Implements a local response to the statewide housing crisis.
- Provides development standards and design guidance for on-site residential development.
- Develops a plan that can be implemented based on existing and anticipated future economic conditions.
- Assures appropriate financing for infrastructure, including domestic water, urban runoff and drainage facilities, and sewage disposal.

1.2 Authority and Format of the Specific Plan

The State of California Legislature has established the authority and scope to prepare and implement specific plans. The State requires that all cities and counties in California prepare and adopt a comprehensive General Plan for the physical development of their areas of jurisdiction. To implement the policies described in the General Plan, regulating programs are adopted (e.g., zoning ordinances, subdivision ordinances, building and housing codes, etc.). California State law authorizes cities with complete General Plans to prepare and adopt specific plans (*Government Code Section 65450 – 65457*). Local planning agencies or their legislative bodies may designate areas within their jurisdiction as areas for which a specific plan is “necessary or convenient” (*Government Code Section 65451*).

Specific plans are intended to serve as bridges between the local General Plan and the individual development proposal for a specific area. Specific plans contain both planning policies and regulations, and may combine zoning regulations, capital improvement programs, and other regulatory requirements into one document.

The Starlite Specific Plan has been created through the authority granted to the City of South El Monte by the *California Government Code, Sections 65450* through *65453*. This Specific Plan has been prepared in accordance with the provisions of the California Government Code, which stipulate that a specific plan contain text and diagrams specifying the following:

- **Land Use:** The specific plan must specify the distribution, location, and extent of the uses of land, including open space, within the area covered by the plan. This discussion is included in *Section 3.2, Land Use Plan*, of this Specific Plan.

- **Public Facilities:** The specific plan must show the proposed distribution, location, extent, and intensity of major components of public and private transportation, wastewater, water, drainage, solid waste disposal, energy, and other essential facilities located within the area covered by the plan, and needed to support the land uses described in the plan. This discussion is included in *Section 3.3, Circulation Plan, Section 3.4, Infrastructure Plan*, and Section 3.5, Dry Utilities and Public Services, of this Specific Plan.

- **Development Standards:** The specific plan must include standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable. This discussion is contained in *Chapter 5, Development Regulations*, of this Specific Plan.

- **Implementation Measures:** The specific plan must include a program of implementation measures, including regulations, programs, and financing measures. A discussion of these topics is included throughout *Chapter 6, Implementation*, of this Specific Plan.

- **General Plan Consistency:** The specific plan must include a statement of the relationship of the specific plan to the General Plan. An analysis of the Starlite Specific Plan's consistency with the City's General Plan is contained in *Appendix A, Consistency with City of South El Monte General Plan*, of this Specific Plan.

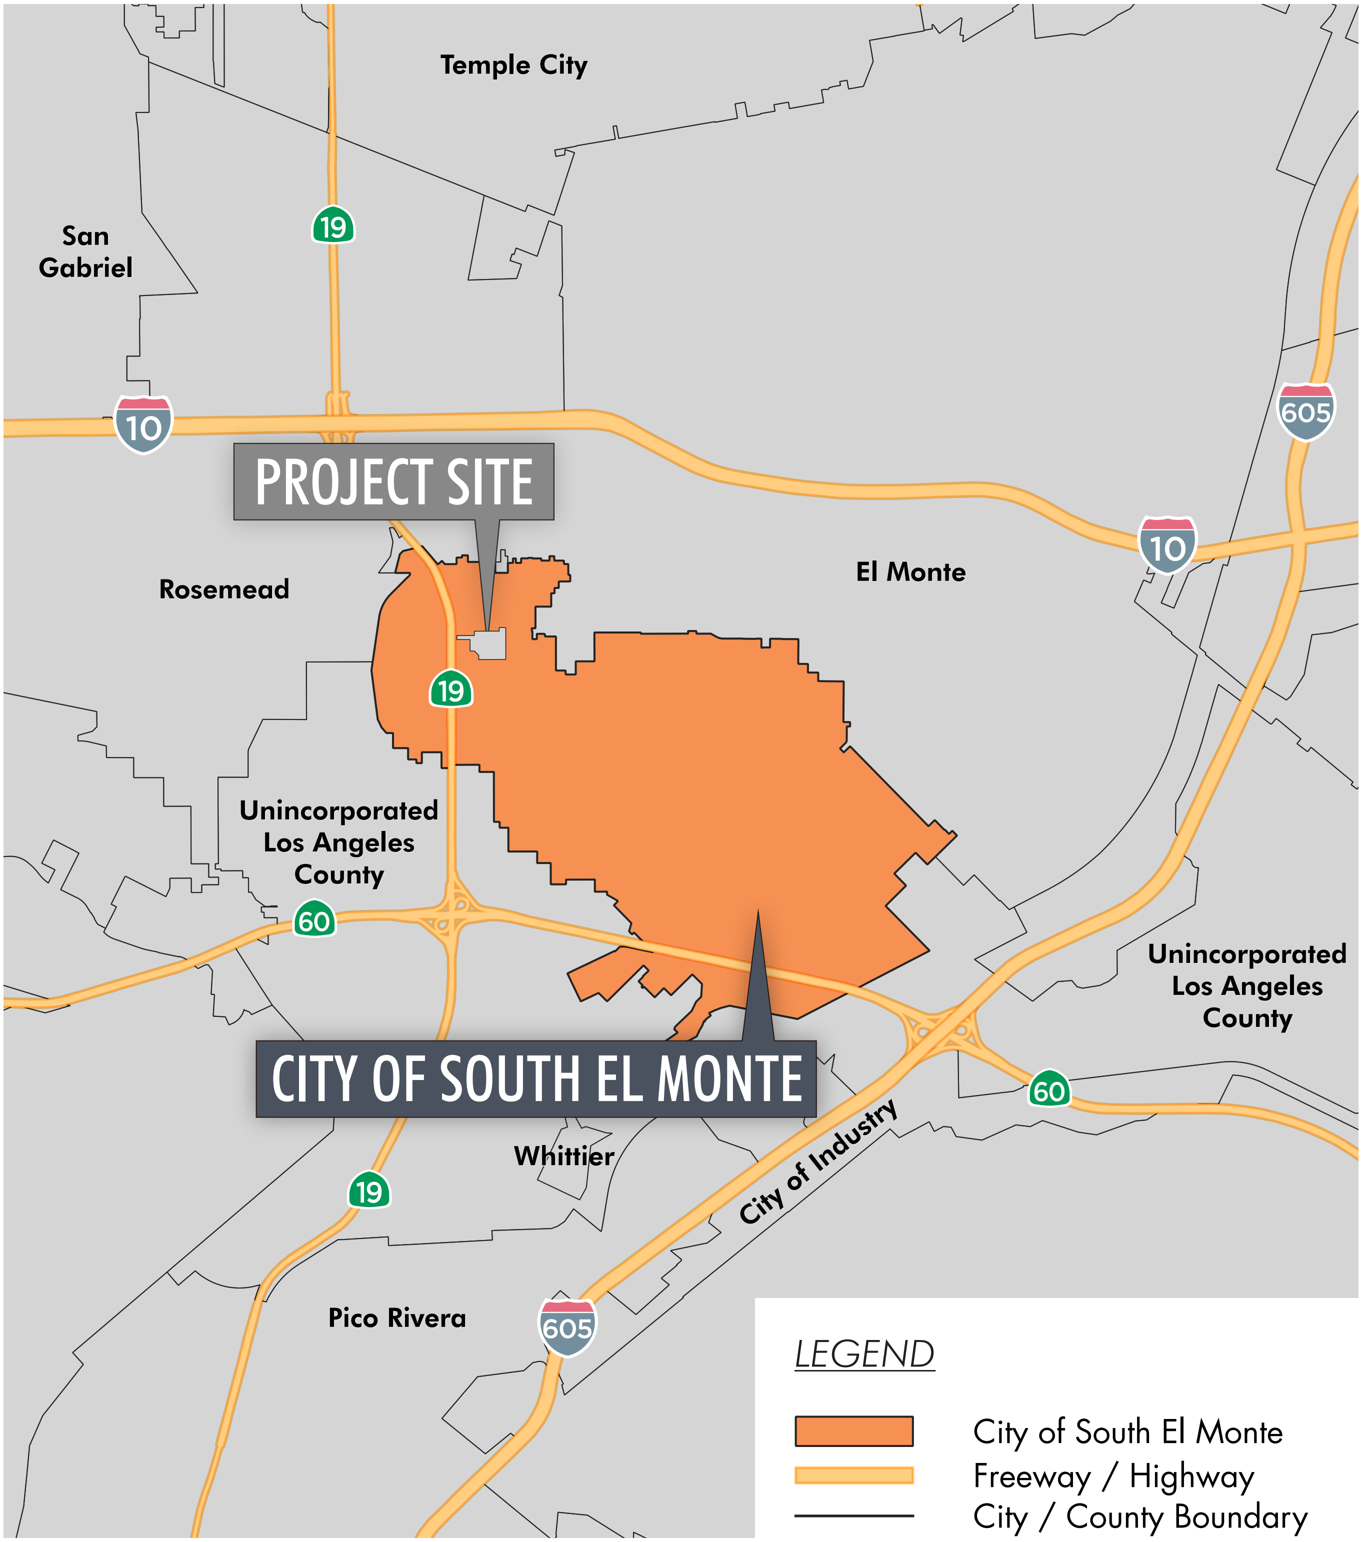
- **Optional Contents:** The specific plan may address any other subject that, in the judgment of the City, is necessary or desirable for implementation of the General Plan. Community building, landscape, architectural, and sustainable design guidelines in *Chapter 4, Design Guidelines*, of this Specific Plan.

1.3 Specific Plan Area Location

The 12.3-acre project site is located in the northern portion of the City of South El Monte, California. The Starlite Specific Plan area is located to the east of State Route 19 (SR-19)/Rosemead Boulevard and west of Chico Avenue. Regional access to the site, depicted on *Exhibit 1.1, Regional Context,* is available from the north via Interstate I-10 and from the south via State Route 60 (SR-60). Local access to the site is depicted on *Exhibit 1.2, Local Context*. Local access from both I-10 and SR-60 is provided by Rosemead Boulevard.

1.4 Specific Plan Summary

The Starlite Specific Plan project is the result of intensive planning and careful design to create a high quality infill project. The Starlite Specific Plan includes up to 207 single- and multi-family dwelling units on the approximately 12.3-acre project site. The project consists of attached and detached two-, three-, and four-bedroom dwelling units, a recreation center, and common open space.

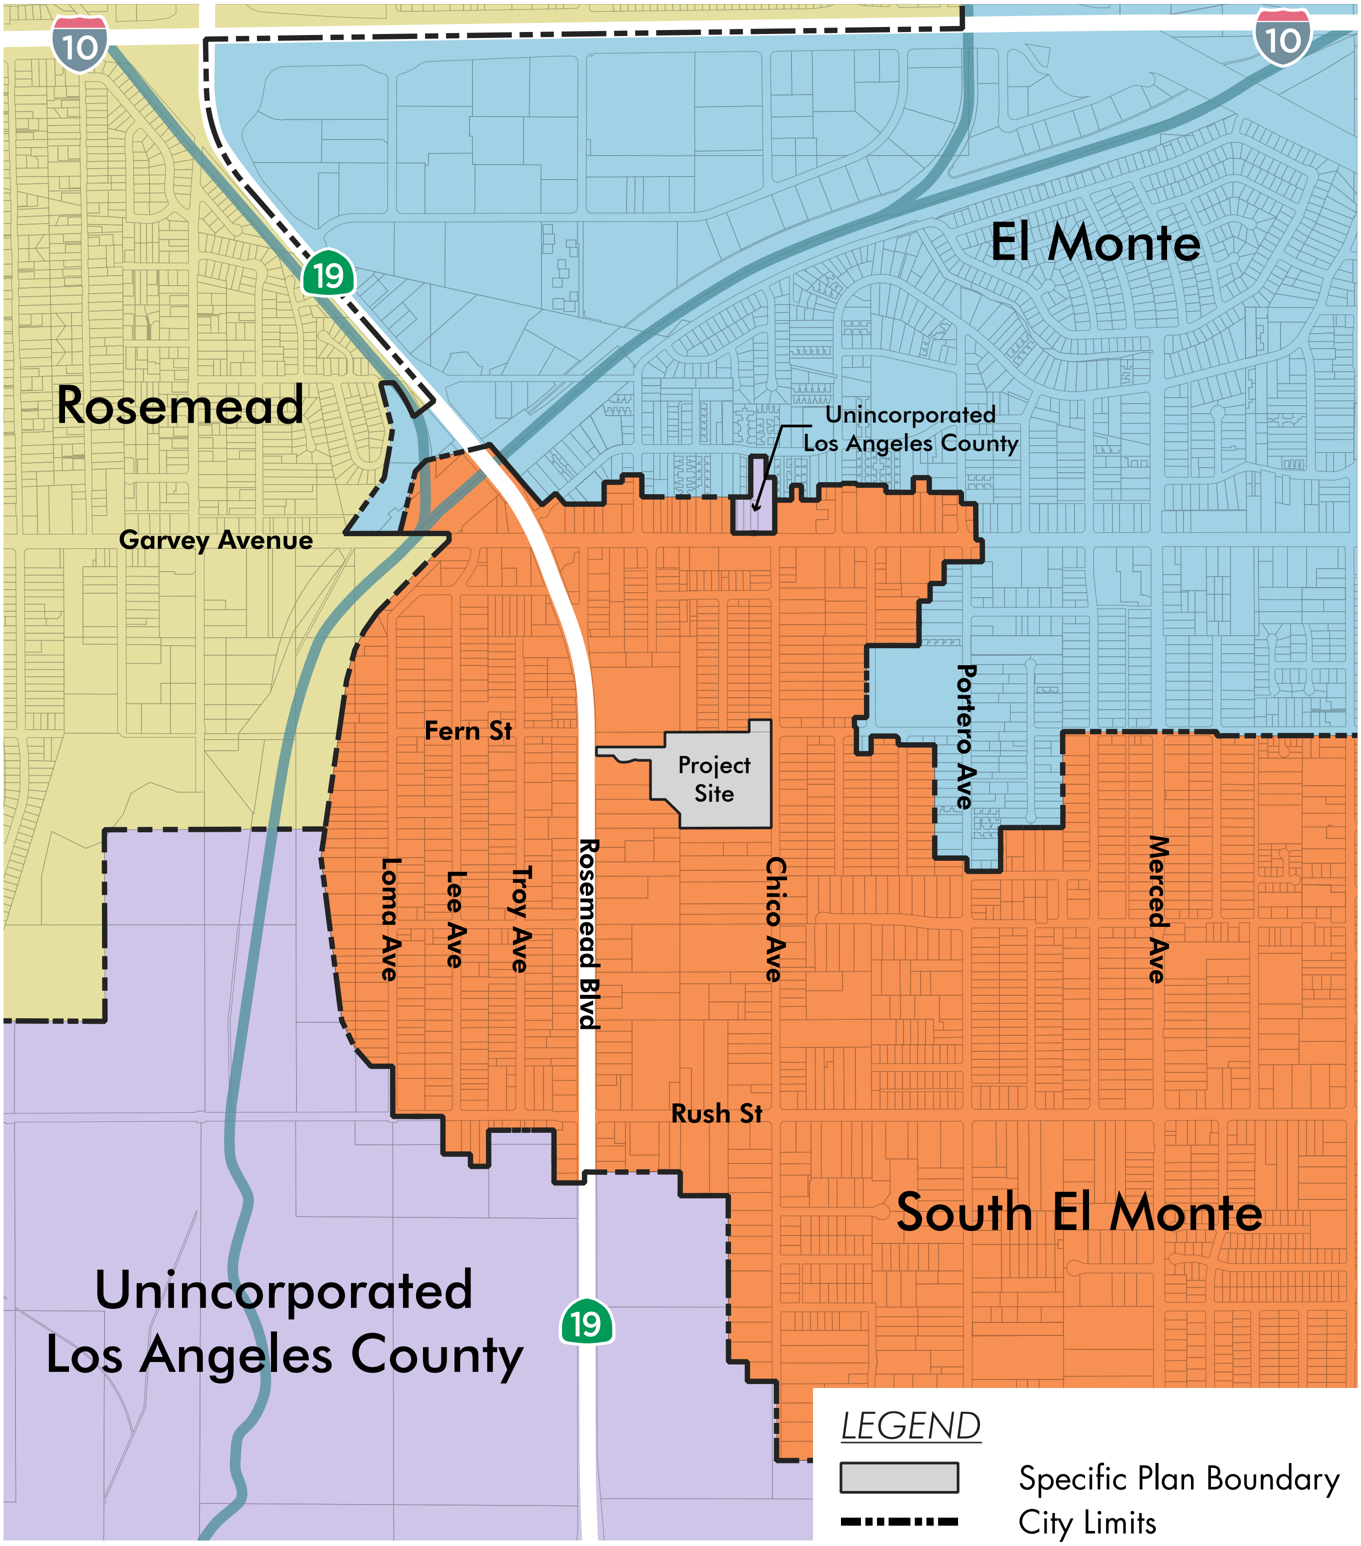


The Starlite Specific Plan incorporates place-making principles to create a pedestrian-friendly development. The common open spaces may contain paseo, a recreation center and landscaped space. The Specific Plan area will have a unifying landscape theme, including a system of courtyards and amenity spaces throughout the project site that maximize access to the outdoors.

1.4.1 Specific Plan Goals

The Starlite Specific Plan is envisioned as a catalyst for the local area and the Rosemead Boulevard corridor. The Starlite Specific Plan is designed to implement a series of realistic and achievable project objectives that will help to implement the applicable City of South El Monte General Plan goals and policies, and ensure that the project is implemented as a high-quality community. These objectives, which are identified below, have been refined throughout the planning and design process.

- Include a variety of housing types, including units affordable to moderate-income earners, consistent with the goals and policies of the City of South El Monte General Plan.



- Include an enhanced-level of community recreational amenities, including but not limited to, a pool and spa.

Source: County of Los Angeles

N. T. S.

Exhibit 1.1, Regional Context

N. T. S.

Source: County of Los Angeles

Exhibit 1.2, Local Context

- Utilize unique public financing programs to provide flexibility in the use of impact fees, boosting programs/services for the greater community.

- Provide a greater horizontal separation (buffer) from existing single-family homes abutting the site than a typical side yard setback.

- Provide new infill housing on a vacant and under utilized site.

- Promote a pedestrian-friendly environment by including sidewalks with street trees and paseos throughout the community and establishing a strong sense of neighborhood.

1.5 Discretionary Actions and Approvals

The City of South El Monte is the Lead Agency for purposes of California Environmental Quality Act (CEQA) compliance. These actions are required to implement this Specific Plan:

- General Plan Amendment: A General Plan Amendment will be necessary to change the General Plan land use designation of the entire property from the current "Commercial-Manufacturing" (CM) and "Medium Density Residential" (MDR) to "Medium Density Residential" (MDR).

- Zone Change: An approval of a Zone Change will be necessary to change the zoning of the entire property from the current "Commercial Manufacturing" (C-M) and "Medium Density Residential" (R-3) to "Specific Plan" (SP) on the City's Zoning Map.

- Specific Plan: The Starlite Specific Plan has been prepared to realize the objectives of the proposed project as defined herein. The Specific Plan will be adopted by Resolution by the City of South El Monte City Council, with the Development Regulations chapter adopted by Ordinance.

- Vesting Tentative Tract Map (VTTM): A VTTM for the Specific Plan area will be prepared and processed through the City in accordance with Chapter 16 of the SEMMC and in accordance with the Subdivision Map Act of the California Government Code.

- Environmental Document: Language TBD after Initial Study and environmental determination have been made.

Final Maps will require approval by the City Council. There will also be subsequent, non-discretionary permits (e.g. grading permits, ministerial approvals, and conditions of approval) that would be necessary to implement the project.

2

PLANNING CONTEXT

2.1 Relationship to the General Plan and Zoning Code of the City of South El Monte

As required by State Law, the Starlite Specific Plan is consistent with the applicable goals and policies contained in the adopted City of South El Monte General Plan. The goals and policies identified within each element of the General Plan have been evaluated, and a statement of compliance with the General Plan has been included in *Appendix A, General Plan Consistency Analysis*. This Specific Plan serves as zoning for the Specific Plan area.

2.1.1 General Plan Land Use

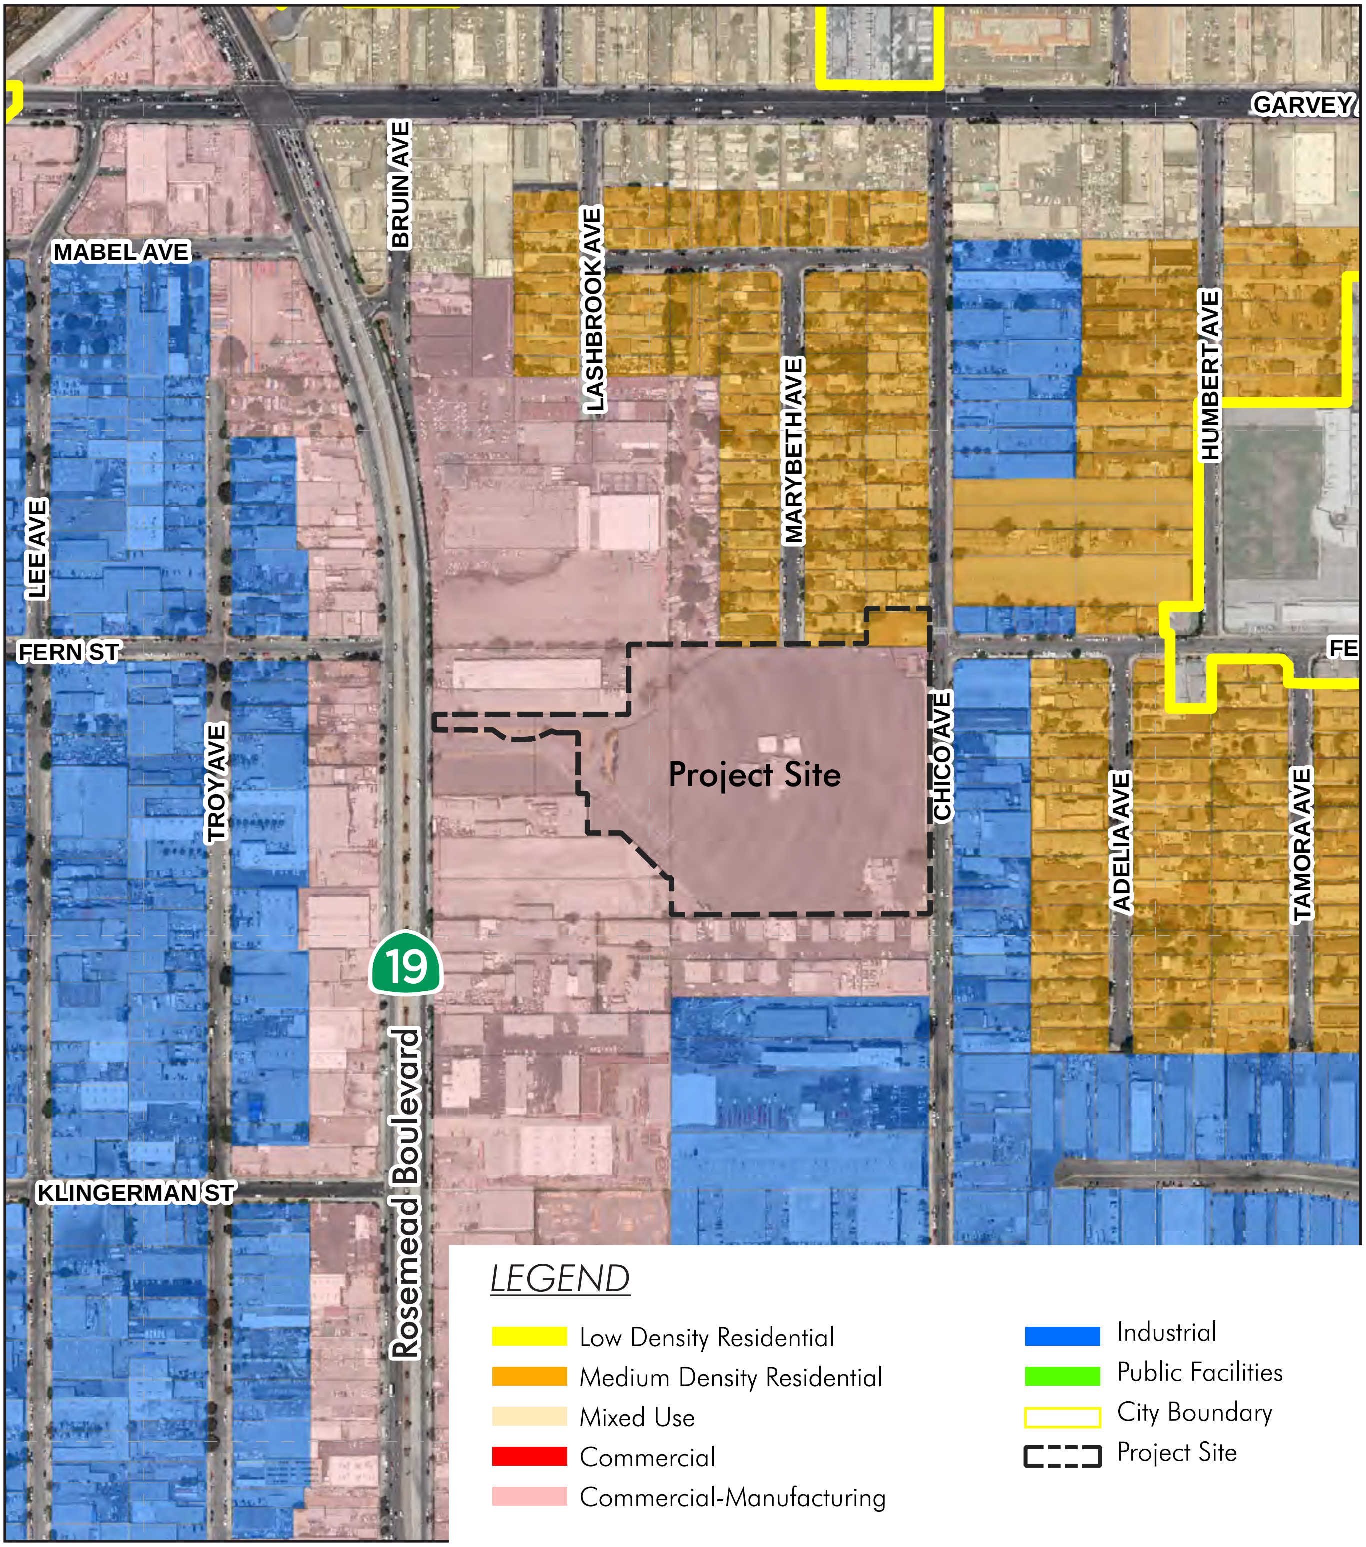
According to the General Plan, the Specific Plan area is designated as "Commercial-Manufacturing" (CM) and "Medium Density Residential" (MDR). A General Plan Amendment is requested to establish "Medium Density Residential" (MDR) as the land use designation for the Specific Plan area (See *Exhibit 2.1, Existing General Plan Land Use Designation* and *Exhibit 2.2, Proposed General Plan Land Use Designation*).

2.1.2 Zoning

The City's current zoning designations for the Specific Plan area is "Commercial Manufacturing" (C-M) and "Medium Density Residential" (R-3). A Zone Change is requested to change the zoning designation of the project site from C-M and R-3 to "Specific Plan" (SP). (See *Exhibit 2.3, Existing Zoning Map* and *Exhibit 2.4, Proposed Zoning Map*).

2.2 Project Context and Surrounding Land Uses

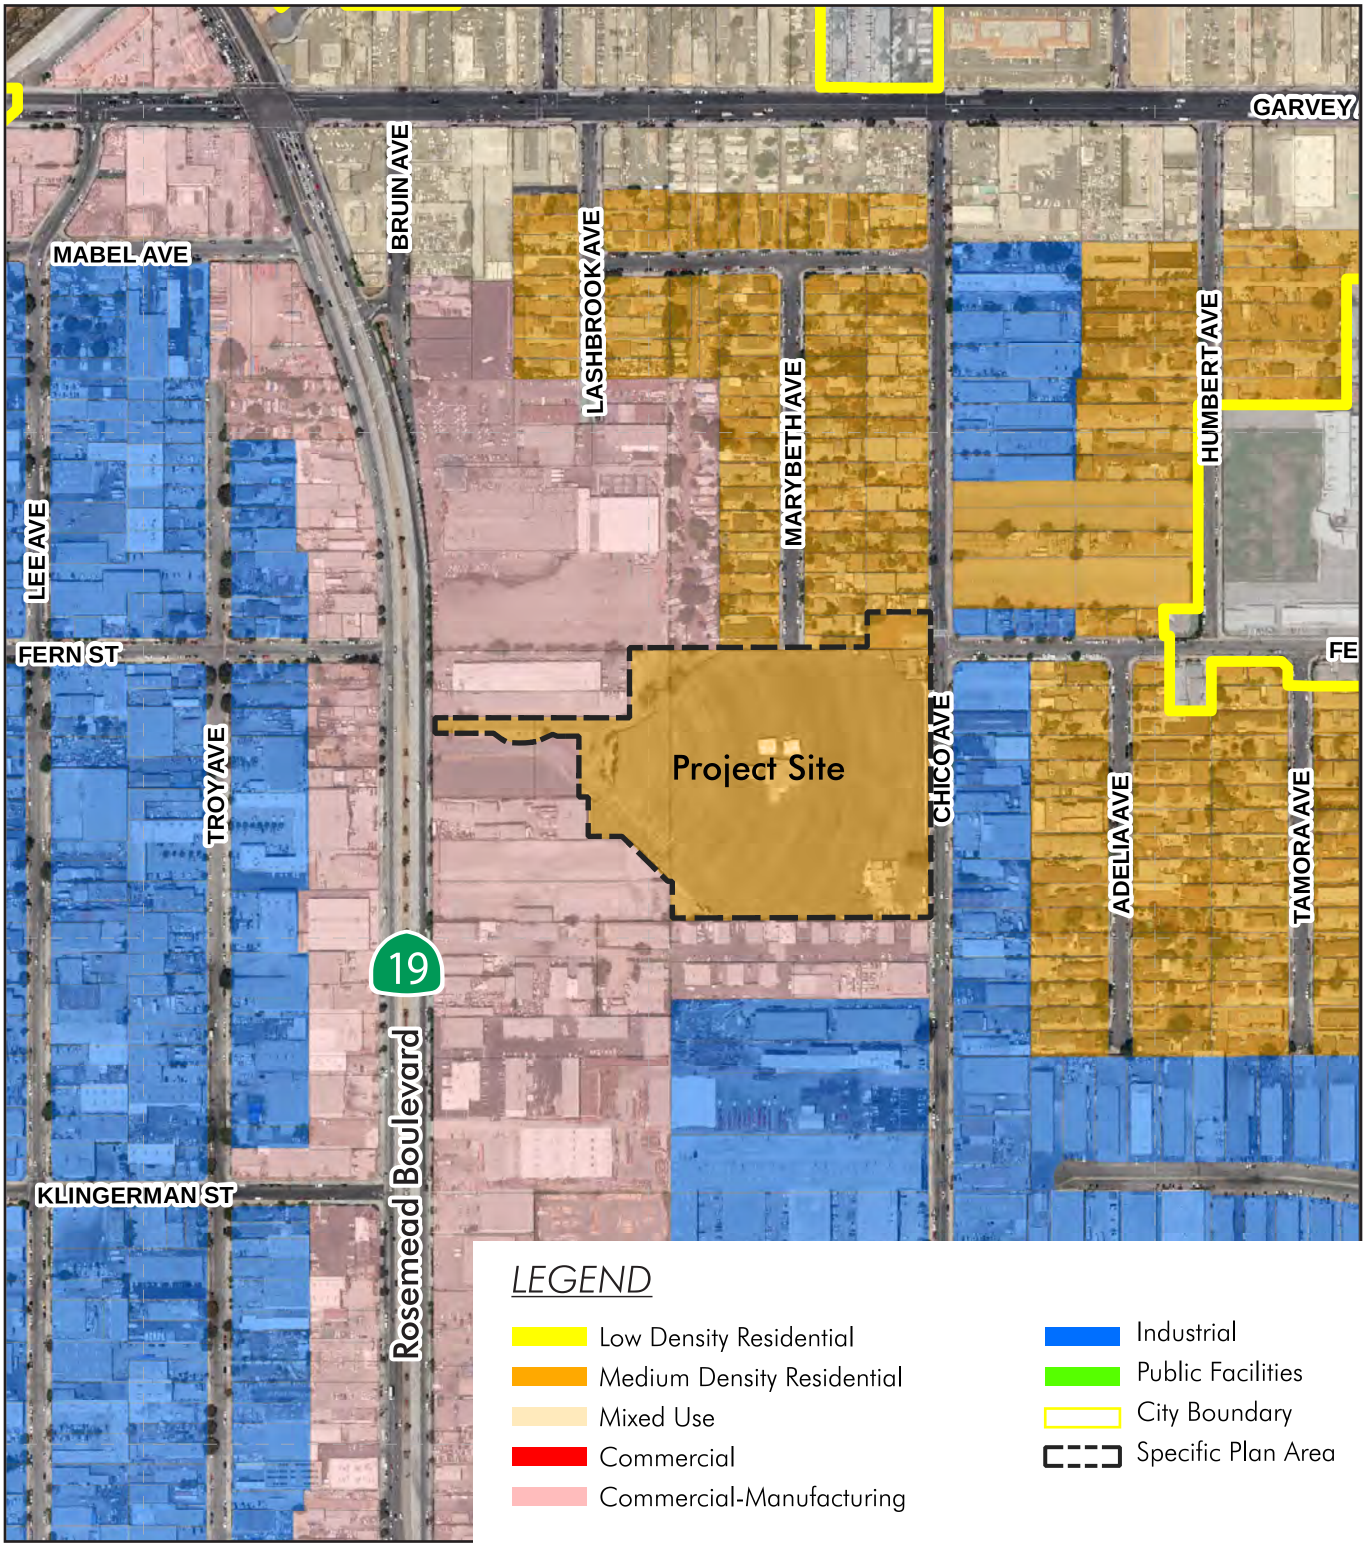
The site is surrounded by a number of uses that influence the design of the project. These influences are shown on *Exhibit 2.5, Surrounding Uses*, and described below:



- The retail center to the north of the Specific Plan area.
- The adjacent one- and two-story single family homes located to the north of the Specific Plan area.
- The adjacent manufacturers located to the south and east of the Specific Plan area.
- Proximity to Rosemead Boulevard.

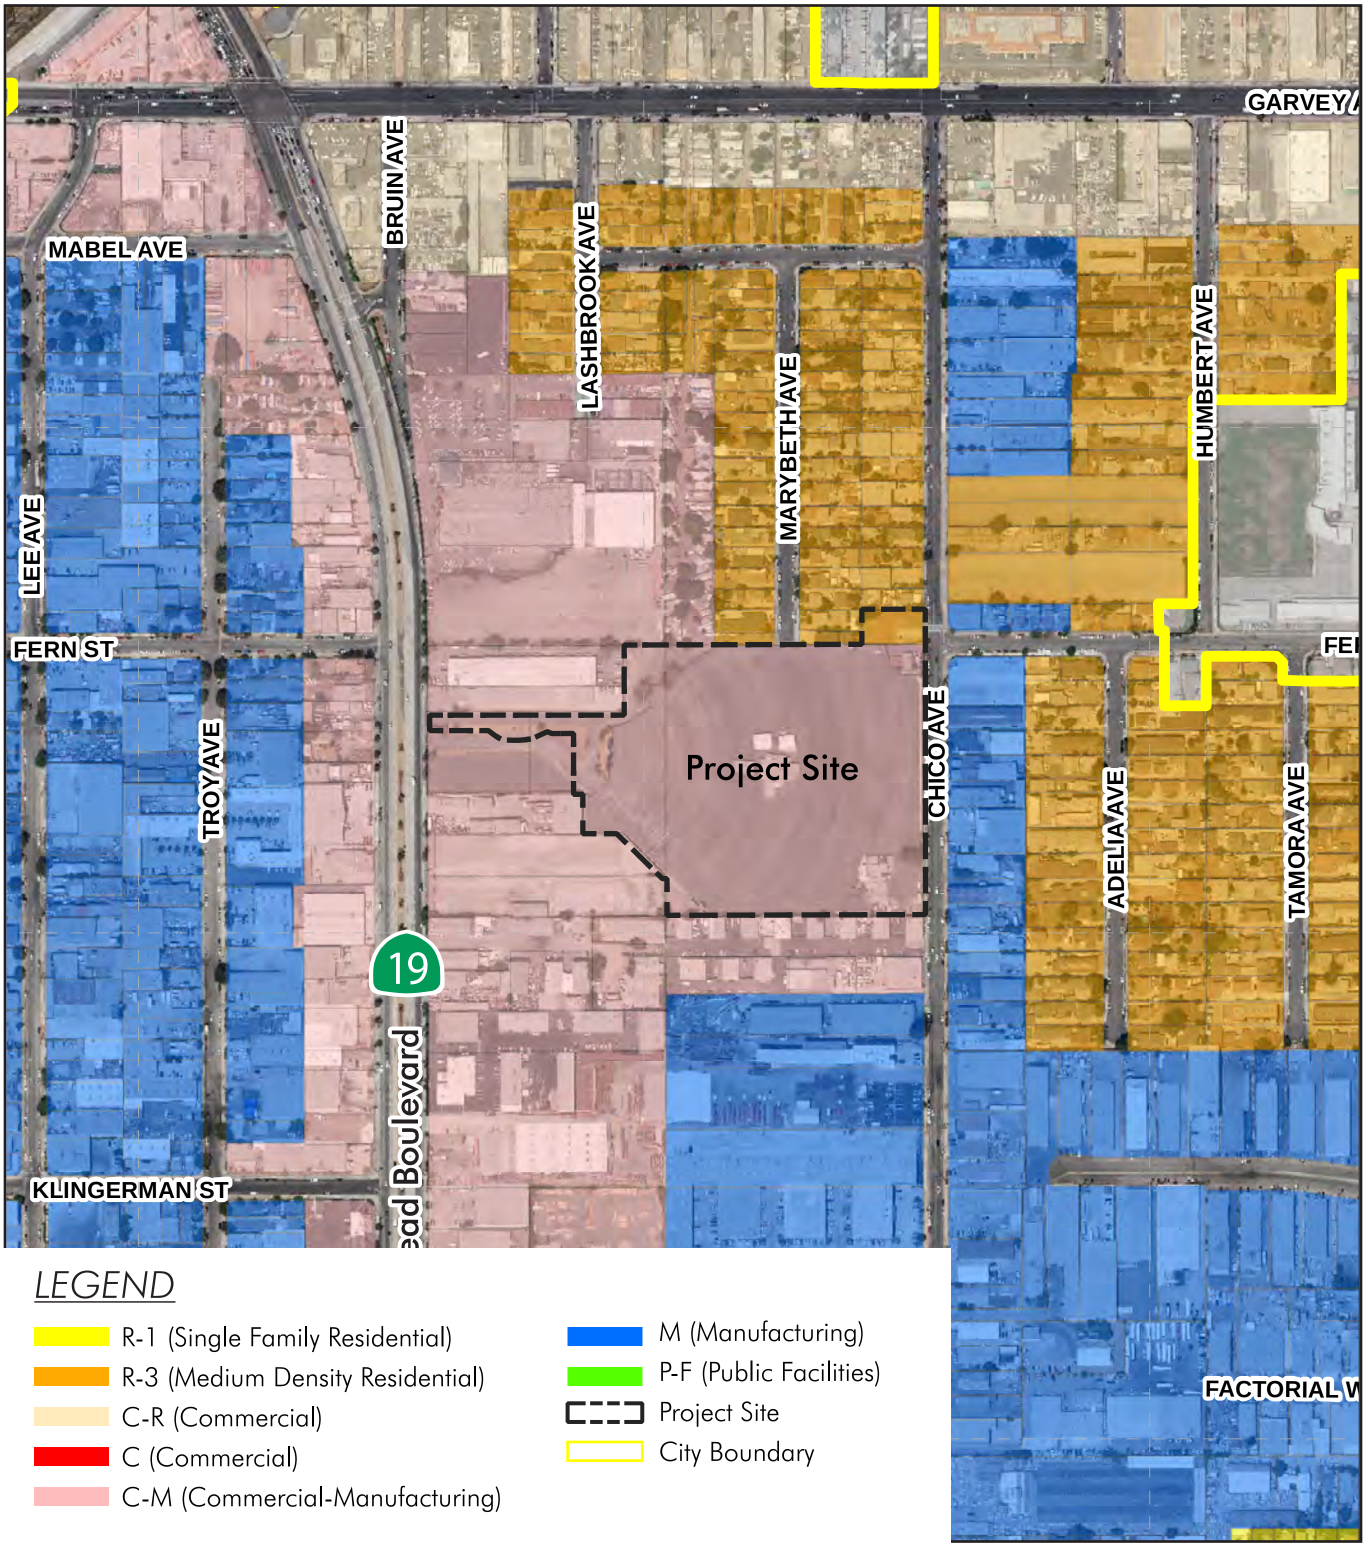
2.3 Existing Site Conditions

The Specific Plan area was most recently utilized for swap meet on weekends. After the permanently closure of the swap meet in 2020, the asphalt covered site is mostly vacant with a residence at the northeast corner of the site and a vacant building at the southwest corner of the site.



2.3.1 Site Topography

The Specific Plan area is relatively flat, with an elevation range from 240 above mean sea level (AMSL) to 245 AMSL.



Source: City of South El Monte

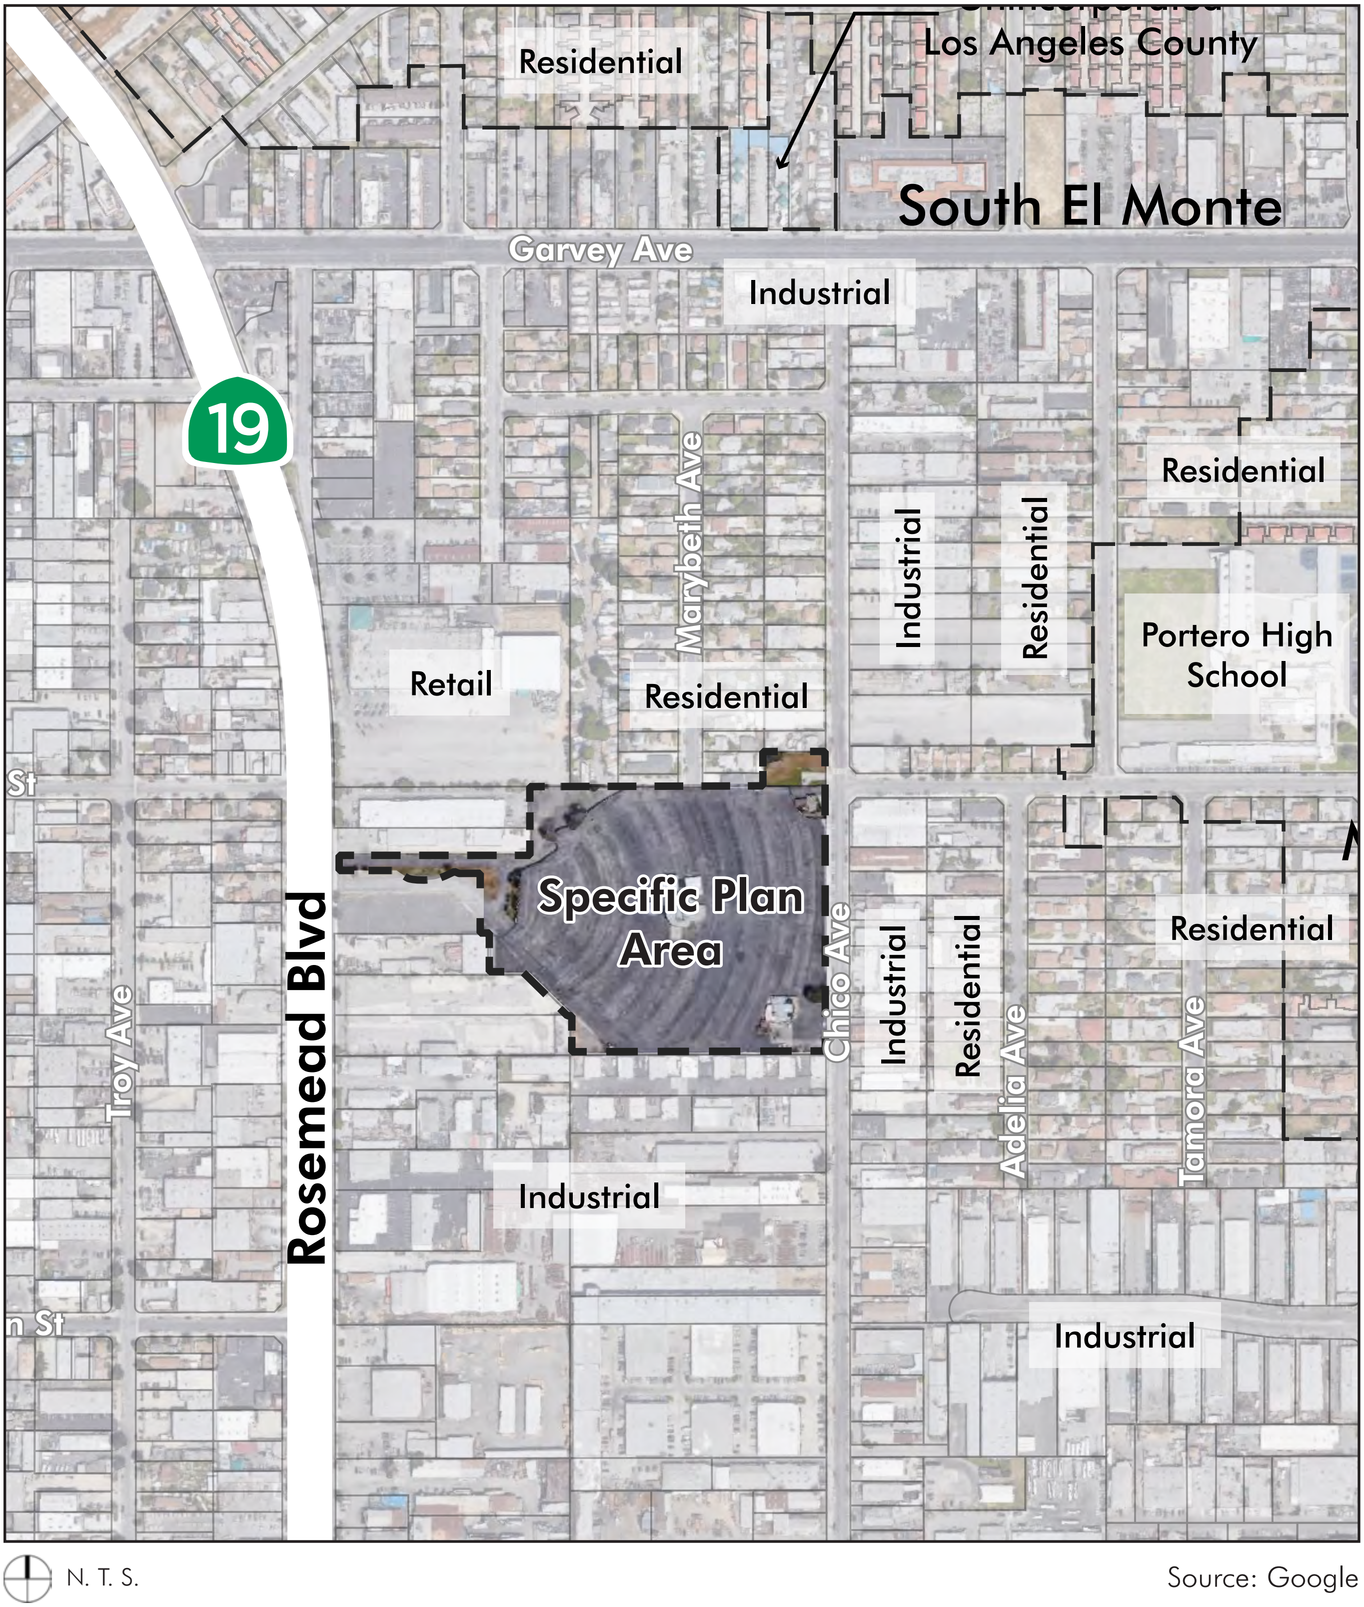
Exhibit 2.2, Proposed General Plan Land Use Designation

Source: City of South El Monte

Exhibit 2.3, Existing Zoning Map

Source: City of South El Monte

Exhibit 2.4, Proposed Zoning Map



2.3.2 Vehicular Access and Mobility

Regional access to the site is provided by I-10 from the north and SR-60 from the south. Local access to the Specific Plan area is provided from Rosemead Boulevard, which is identified as an arterial highway by the General Plan. Rosemead Boulevard is comprised of four travel lanes and a median. An existing driveway connect the project site to Rosemead Boulevard.

The nearest bus stop is located at the intersection of Rosemead Boulevard, and Fern Street. This bus stop is serviced by Metro Routes 176 and 266. Route 176 provides service between the cities of South Pasadena and Montebello. Route 266 provides service between the cities of Pasadena and Lakewood (See *Exhibit 2.6, Existing Mobility Access)*.

2.3.3 Easements

Five existing pipeline easements will remain. Two gas lines is generally along the northerly property line, a 10-foot storm drain runs diagonally through the northwest corner and along the north side of the driveway, which provides the direct access to Rosemead Boulevard, two other easements are located at the northeast corner of the project site.

3

PLAN ELEMENTS

3.1 Purpose and Intent

This Chapter contains a discussion of the various plan elements for the Starlite Specific Plan, including the following:

- Land Use Plan and Circulation Plan
- Infrastructure Plan
- Dry Utilities and Public Services
- Grading Plan

Each plan works in tandem with the other plans to establish a framework for the Specific Plan area, ensuring that the Project will develop as a quality and cohesive community within of the overall urban fabric of Starlite.

3.2 Land Use Plan

The Starlite Specific Plan is an infill development that converts the mostly vacant site of the former Starlite drive-in/swap into a high-quality residential community to meet the City's housing needs.

The medium density residential (MDR) designation is applied to the entire Starlite Specific Plan area, as shown in *Exhibit 3.1, Land Use and Circulation Plan*. The MDR designation allows for development of single-family detached homes, duplexes, townhomes, condominiums, and apartments. Other compatible uses serving the needs of the residents, such as parks, recreation facilities, and open space, are also allowed.

The General Plan identifies a density up to 16 du/ac for the MDR land use designation. At the maximum density of 16 du/ac, the maximum unit yield for the Starlite Specific Plan area is 197 dwelling units. The Specific Plan includes affordable housing units for low-income families. By providing 10% of the 197 units as affordable housing units, which equates to 20 dwelling units, for low-income households, the Starlite Specific Plan is allowed a 5% density bonus per Section 65915 of the California Government Code and South El Monte Municipal Code (SEMMC) Chapter 17.83 Density Bonus Procedures.

The density bonus brings the total maximum allowable number of dwelling units to 207 dwelling units on the approximately 12.3 acre project site, resulting in a gross project density of 16.8 dwelling units per acre. *Table 3.1, Land Use Summary*, provides a summary of the land use acreage, maximum number of dwelling units, and maximum density.

Table 3-1 Land Use Summary

LAND USE	GROSS AREA (AC)	MAXIMUM DWELLING UNITS (DU)	MAXIMUM DENSITY (DU/AC)
MEDIUM DENSITY RESIDENTIAL (MDR)	12.3	207	16.8

Below is the general development parameter for the Specific Plan area:

A. Development within the Specific Plan area shall not exceed 207 dwelling units, with a maximum density of 16.8 dwelling units per gross acre.

B. The Specific Plan area shall include a mix of detached and attached dwelling units.

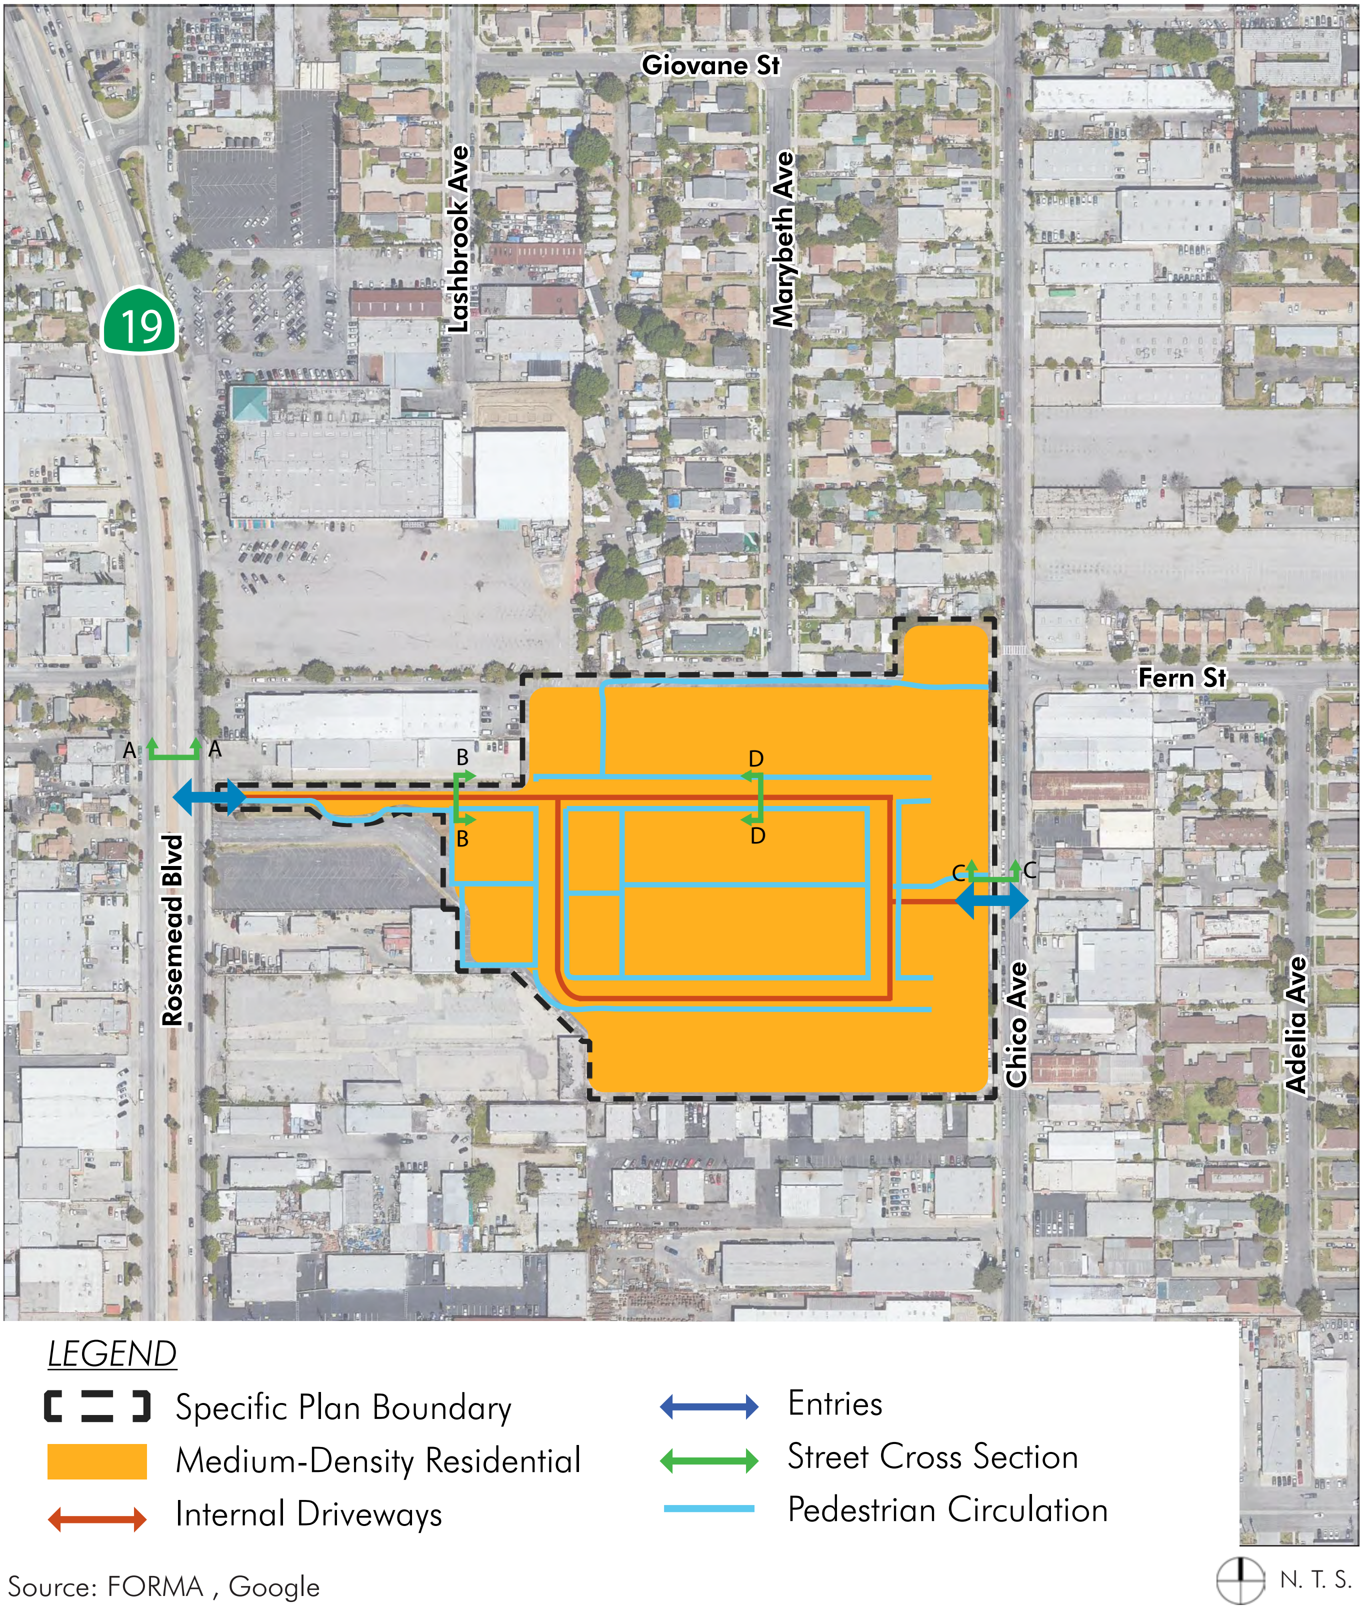
C. The Specific Plan area shall be gated.

D. Adequate park/recreation areas and open space shall be provided to meet the needs of the residents, pursuant to Chapter 4, Design Guidelines and Chapter 5, Development Regulations of this Specific Plan.

E. Development shall comply with the design criteria and development standards set forth in Chapter 4, Design Guidelines and Chapter 5, Development Regulations of this Specific Plan.

3.3 Circulation Plan

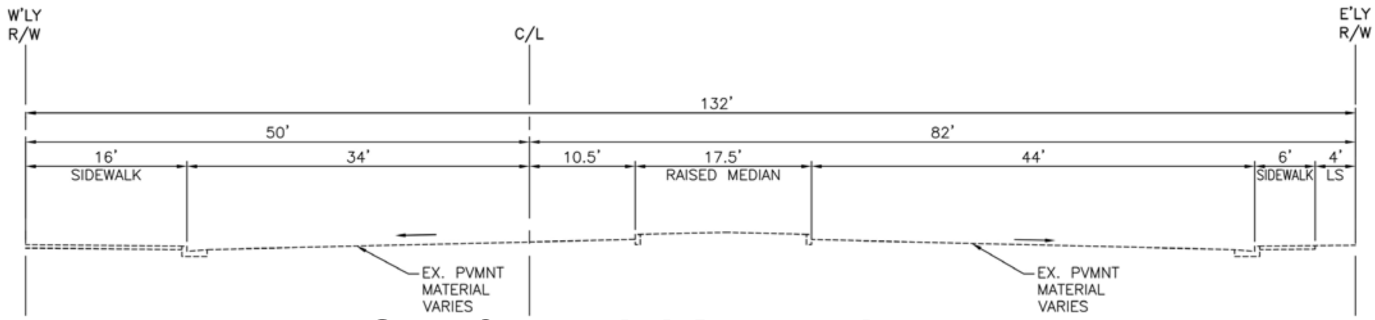
Regional access to the site is provided by Interstate 10 (I-10) from the north and SR 60 from the south. Local access to the project is provided by Rosemead Boulevard (SR 19), which parallels the western boundary of the Specific Plan area, and Chico Avenue to the east of the project site.



3.3.1 Vehicular Circulation

Rosemead Boulevard (SR/19) runs in a north-south direction. The Circulation Element of the General Plan designates Rosemead Boulevard as an Arterial Highway, a four-lane divided roadway. The typical existing Rosemead Boulevard section is shown in *Exhibit 3.2, Typical Street Cross Sections*. A proposed driveway providing direct access to Rosemead Boulevard is shown in *Exhibit 3.2, Typical Street Cross Sections*. A new traffic signal will be installed on Rosemead Boulevard at the entrance to the project site.

Chico Avenue runs in a north-south direction. The Circulation Element of the General Plan designates Chico Avenue as a Residential and Industrial Collector, a two-lane undivided roadway with on-street parking. The typical Chico Avenue section is shown in *Exhibit 3.2, Typical Street Cross Sections*. As depicted on *Exhibit 3.1, Land Use Plan and Circulation Plan,* two gated project entries drives will be provided from Rosemead Boulevard and Chico Avenue. The entry drives will continue into the development and become a loop road configuration. The typical design of internal driveways within the project is depicted in *Exhibit 3.2, Typical Street Cross Sections*.



3.3.2 Pedestrian Circulation

Pedestrian circulation is provided throughout the development by a network of walkways along the internal drives and open space areas, which will connect to the existing City sidewalks along Rosemead Boulevard and Chico Avenue, as shown in *Exhibit 3.1, Land Use Plan and Circulation Plan*.

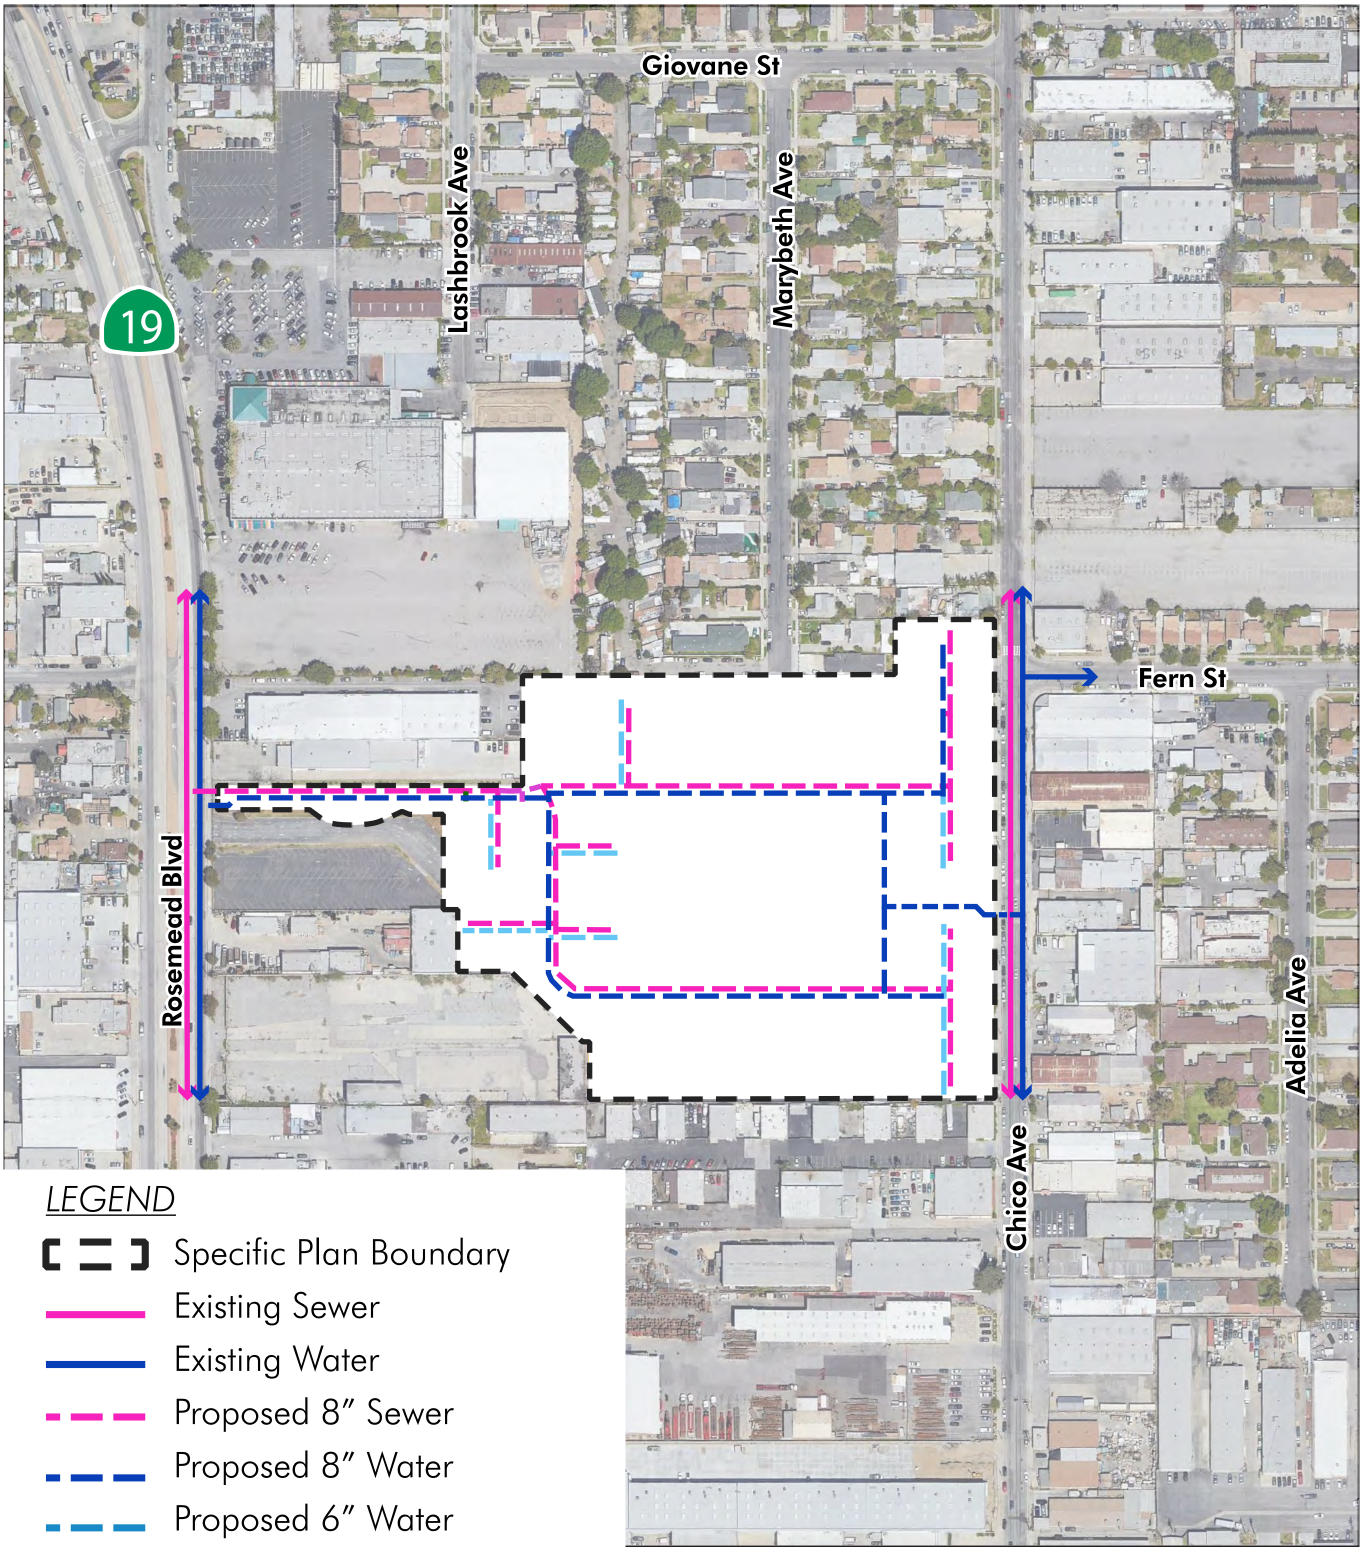
N. T. S.

Exhibit 3.2, Typical Street Cross Sections

3.4 Infrastructure Plan

Design and construction of infrastructure facilities, including but not limited to, water, sewer, and storm drains, shall comply with the requirements of the City of South El Monte and/or relevant service agencies.

3.4.1 Water System

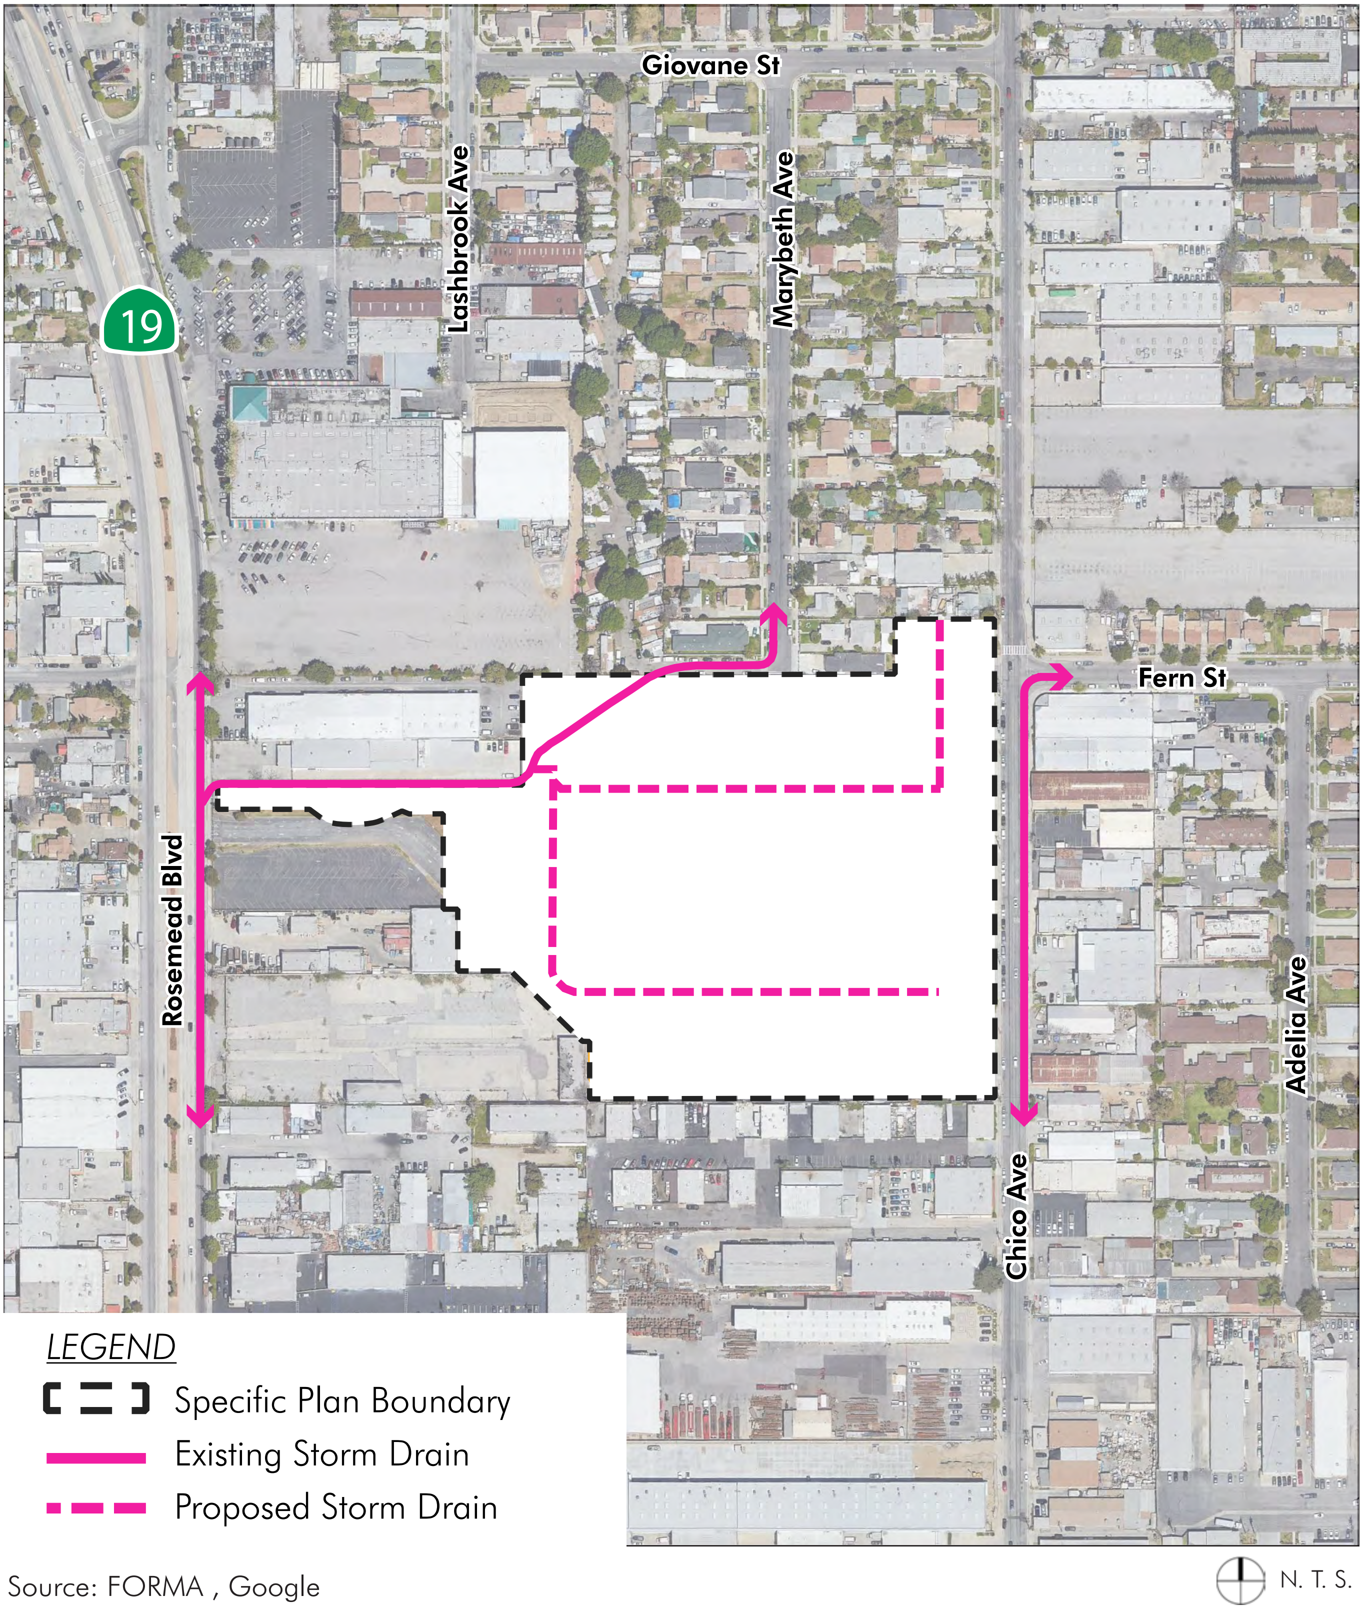


The Specific Plan area is within San Gabriel Valley Water Agency service area. There is an existing 12-inch water main in Rosemead Boulevard and a 10-inch water main in Chico Avenue. Private looping water main is proposed within the private drive aisles connecting to both Rosemead Boulevard and Chico Avenue water lines. Existing and proposed potable water system improvements are depicted in *Exhibit 3.3, Water and Sewer Plan*.

3.4.2 Sewer System

The 8-inch public sewer main are proposed within the private drive aisles. The onsite sewer main system will extend to Rosemead Boulevard and connect to an existing 8-inch public sewer main owned by the City of South El Monte. Proposed sewer infrastructure improvements are depicted on *Exhibit 3.3, Water and Sewer Plan*.

3.4.3 Drainage Plan



The sewer facilities and infrastructure are managed by the City's Public Works Department, owned, maintained and operated by the Los Angeles County Sanitation Districts (LACSD). Onsite runoff will be collected and detained in a central underground detention facility in compliance with the Los Angeles County Low Impact Development Manual, 2014. Storm water in excess of the required treatment volume will be conveyed directly to Los Angeles County storm drain system. Proposed storm drainage improvements are depicted on *Exhibit 3.4, Storm Drainage Plan*.

Source: FORMA , Google

N. T. S.

Exhibit 3.3, Water and Sewer Plan

Source: FORMA , Google

Exhibit 3.4, Storm Drain Plan

3.5 Dry Utilities and Public Services

3.5.1 Dry Utilities

Natural Gas

Natural gas service for the Specific Plan area is provided by Southern California Gas Company (SCG).

Electricity

Electricity service for the Specific Plan area is provided by Southern California Edison (SCE) through existing lines in the surrounding streets.

Cable, Telephone, and Internet

Cable, telephone, and internet services within the City of South El Monte are provided by AT&T and Charter Cable Company.

3.5.2 Public Services

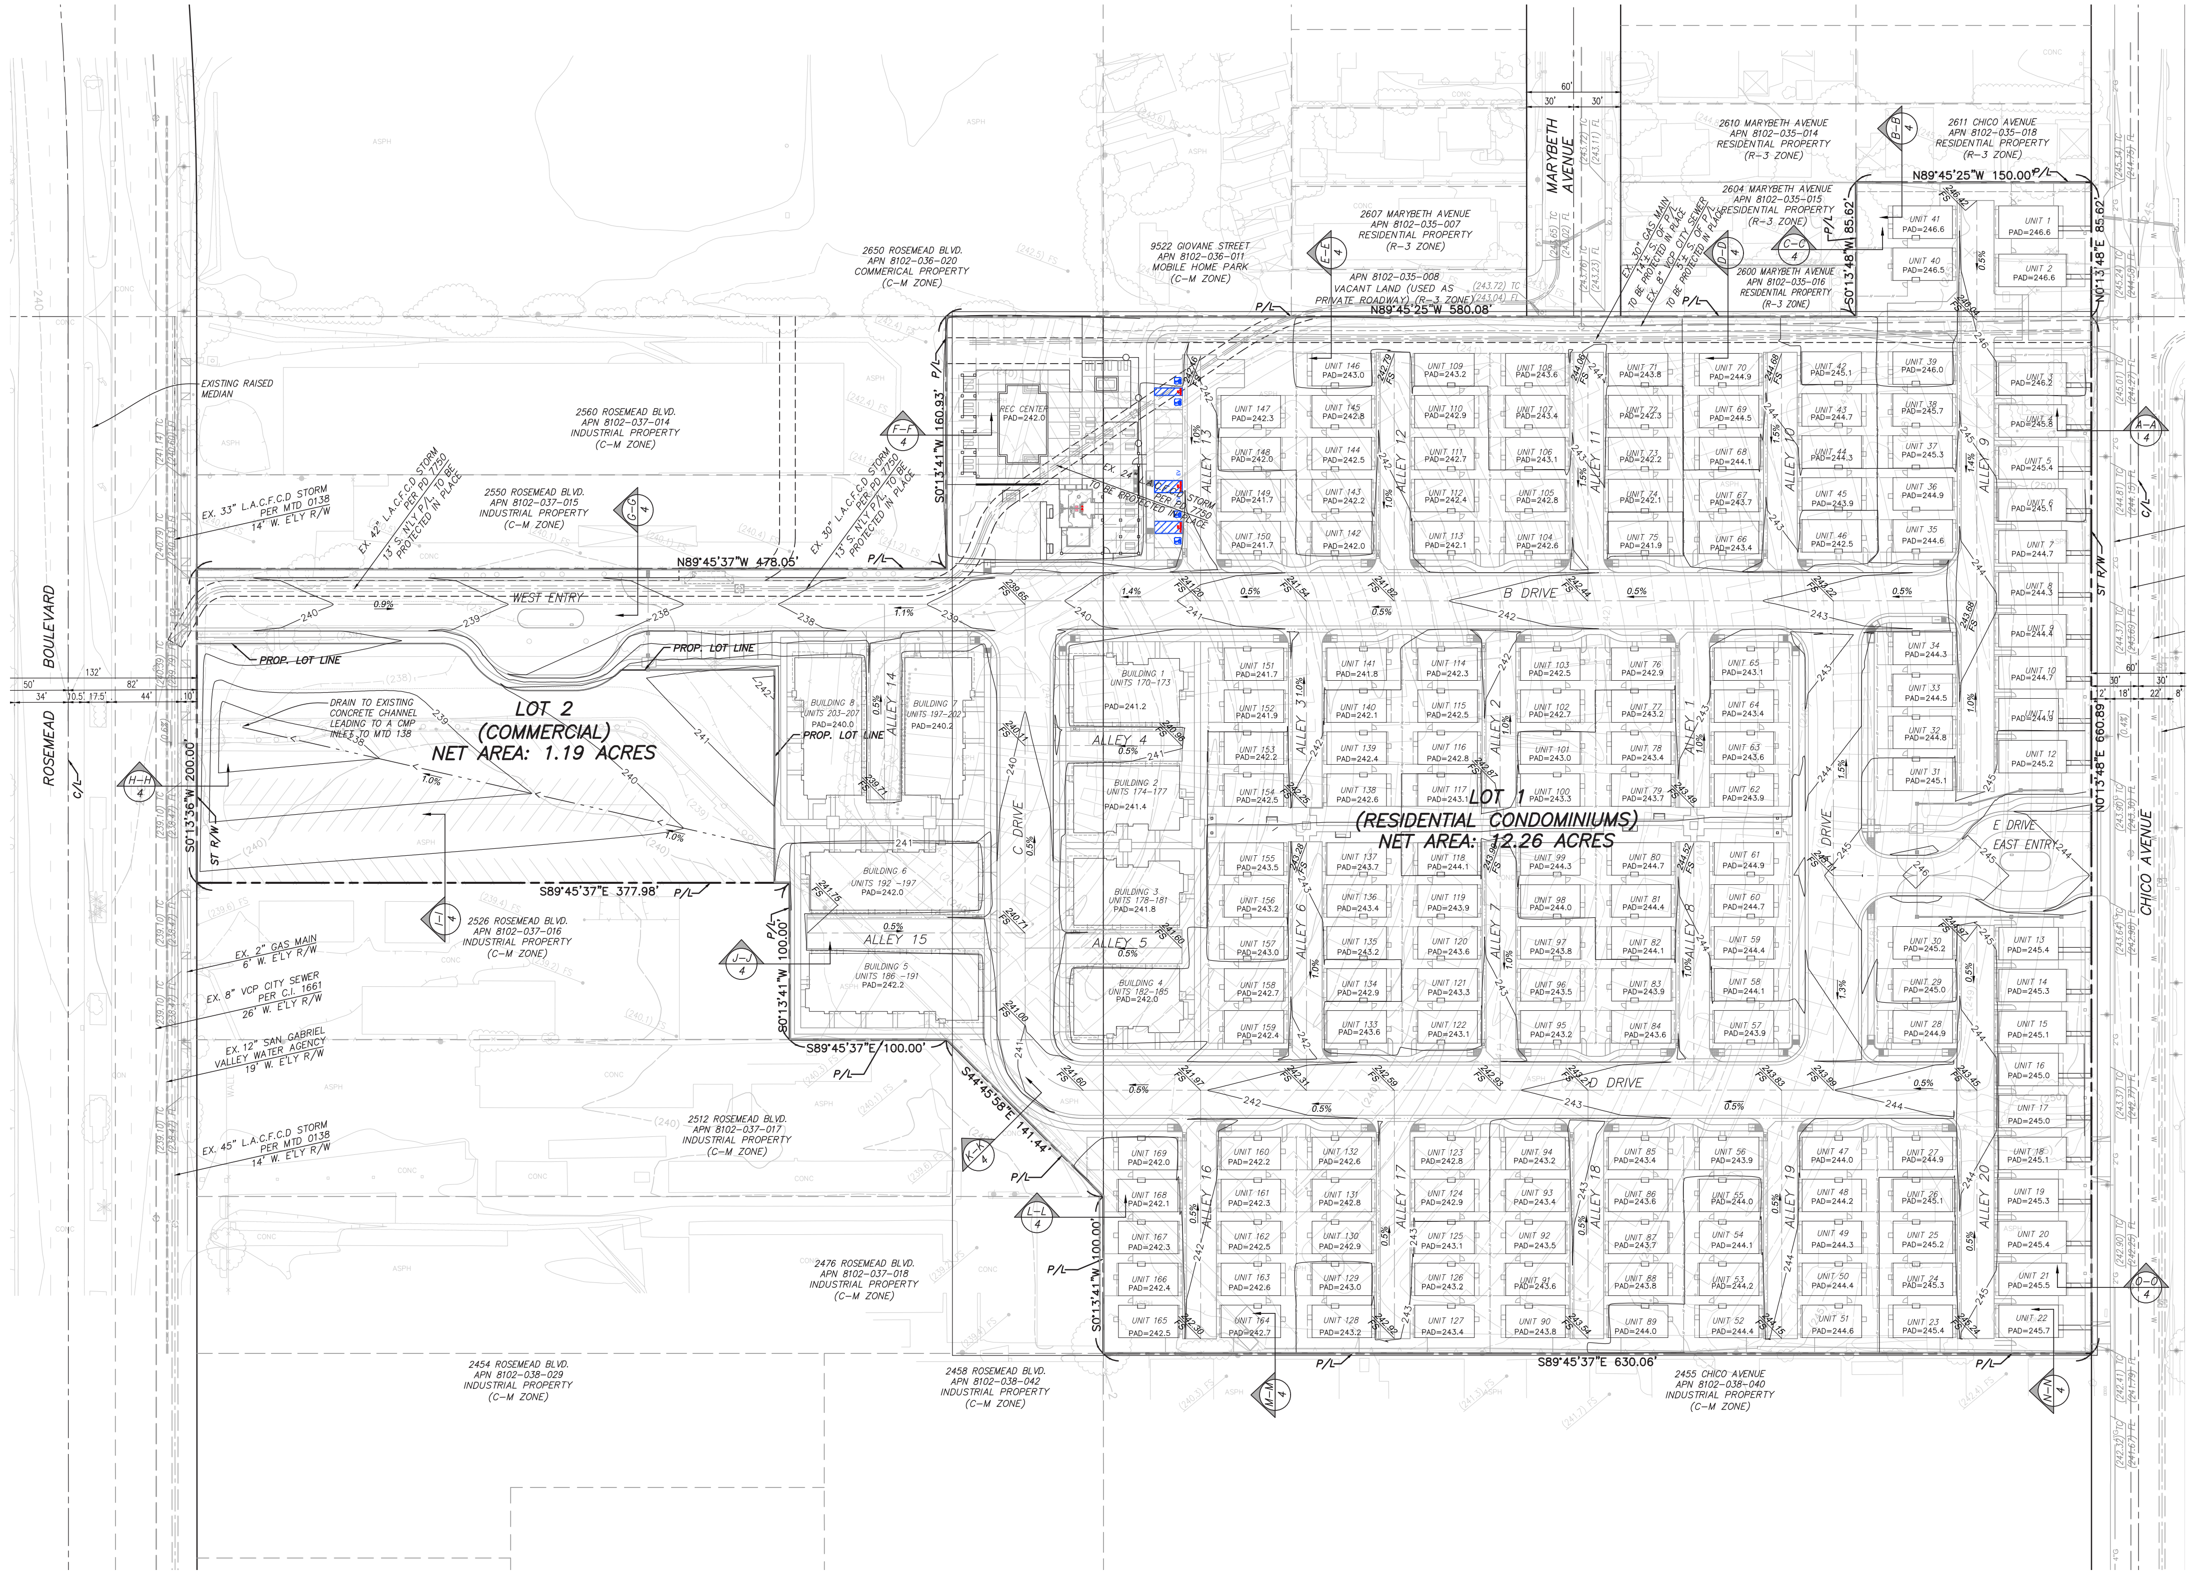
Fire and Emergency Response Services

Fire and emergency response services are provided by Los Angeles County Fire Department (LACFD) Station 90, located approximately 1.6 miles southeast of the Specific Plan area at 10115 Rush Street, South El Monte.

Law Enforcement Services

Law enforcement services for the Specific Plan area is provided by the Los Angeles County Sheriff's Department (LASD). The nearest station is located approximately 3.5 miles northwest of the Specific Plan area, at 8838 Las Tunas Drive, Temple City.

Solid Waste Disposal



Solid waste disposal, yard waste, and recycling material collection service for the Specific Plan area is provided by Athens Services.

Schools

The site is located in the El Monte City School District. As part of the City's permitting process, a school fee will be paid to the El Monte City School District prior to City's issuance of building permits.

3.6 Grading Plan

Grading for the site is intended to respond to the site topography. The existing buildings will be demolished. The proposed grading concept, as depicted in *Exhibit 3.5, Conceptual Grading Plan*, is designed to balance cut and fill within the project area to the extent feasible. Final engineering may result in modifications to the overall grading concept, but the modifications should conform to the general intent of the Conceptual Grading Plan.

4

DESIGN GUIDELINES

4.1 Introduction

This chapter contains architectural, landscaping, and sustainability design guidelines for the Starlite Specific Plan. These guidelines ensure that the Specific Plan area will develop as a cohesive and high-quality residential community, while still allowing some flexibility for designers to incorporate their creative expertise into the built environment. The Design Guidelines are intended to be flexible in nature while establishing basic evaluation criteria for the development review process. The strongest level of design intent is specified by using terms such as "must," "shall" and "prohibited." Anything with a "must" or "shall" is required. Preferred design items are noted as "encouraged," "preferred," "recommended," "appropriate," or as one that "should" be included. Preferred design items are considered "voluntary" and need not be included in a proposed development. If the approving body finds that the plans are consistent with the overall intent and goals of these Design Guidelines, the plans do not need to meet each preferred design guideline within this section. Images within this Chapter are conceptual and are intended to illustrate the proposed design aesthetic, and are not intended to depict the final design.

4.2 Architectural Design Guidelines

The Starlite Specific Plan is designed to provide a pedestrian friendly residential community with an appropriate mix of housing types. The architectural design guidelines in this section have been prepared to provide the framework for high quality design. These architectural design guidelines express the desired character of future development, ensure a consistent level of quality, and accommodate emerging architectural and product trends.

The Starlite Specific Plan area will feature a mix of Spanish, Craftsman and Farmhouse architectural styles to promote interest and establish a distinct sense of place. Distinguishing characteristics of these styles are described below.

Spanish

The Spanish style was popular during the 1920s and early 1930s. This style evolved in California and the southwest as an adaptation of Mission Revival infused with additional elements and details from Latin America. It is common in California, Arizona, Texas and Florida. The key elements of this style were adapted to the California lifestyle, including stucco walls, courtyards, and flat or low-pitched roofs. Plans were informally organized around a courtyard with the front elevation simply articulated and detailed.

Identifying Characteristics

- Red "S" tile gable or hip roofs; shed roofs over porches
- Stucco exterior walls
- Recessed entry, arch or curved element, or feature window on front elevation
- Decorative metal railing
- Gable roof end details

Craftsman

The Craftsman style was strongly influenced by the English Arts and Crafts movement of the late 19th century. Originated in California, this American style quickly spread across the country during the 1920s and 1930s. The Craftsman style sought the elimination of superfluous ornamentation, creating beauty instead through the simplified lines and masses of the building itself. This unique style promoted hand crafted quality to create natural, warm and livable homes.

Identifying Characteristics

- Low-pitched gable roofs, occasionally hipped
- Wide projecting eaves with exposed rafter tails, and decorative beam or braces added under the gable
- Covered front porches, either full or partial-width, with roof supported by square columns
- Stone used on post or building bases
- Exterior finishes that blend with the natural surroundings, such as wood, stucco and stones
- Vertically proportioned, upper mullioned double hung windows at front elevations.

Farmhouse

The Farmhouse style is defined by simple practicality. Homes were designed to provide basic comfort and utility, be attractive, and offer flexibility to grow over time. The Farmhouse style is traced back to Colonial styles from New England and later the Midwest. Well into the early 20th century, most homes were designed and built by local craftsmen, resulting in substantial regional deviations across the country.

Identifying Characteristics

- High pitch gabled roofs; shed roof accents
- Wood siding in combination with stucco
- Covered porches with simple wood columns and railings
- Vertically proportioned windows, often grouped in two or three
- Trim details around windows and doors

Due to constantly evolving market conditions and homeowner preferences, other architectural styles may be permitted within the Specific Plan area after reviewing by the community development director or their designee.

Building Orientation and Massing

The elevations of the residential community are an important element in creating a sense of place and defining a human-scaled streetscape. Building frontages should be designed to create visual interest and promote pedestrian activity.

- Attached buildings should be located and oriented to the streets and primary open space areas.

- Careful consideration should be given to street orientation and building placement to help protect privacy, views and the visual quality of the neighborhood, and maximize solar access of the buildings where feasible and reasonable.

- Buildings located along the eastern Specific Plan area boundary shall have front entries facing Chico Avenue.

- Design the front elevation of attached residential buildings to clearly delineate individual units as a way of breaking up mass.

- Buildings should incorporate layered wall planes and offset forms that may include cantilevered masses, recessed masses or entries, or volume spaces, to create interest, reduce the apparent bulk and establish pedestrian scale.

- Offset forms in the massing should be consistent with the architectural style of the building and incorporated as a functional element or detail enhancement.

- Buildings should be arranged and oriented to create a variety of outdoor spaces such as courtyards, paseo and/or usable open spaces that encourage social and recreational activity.

Roof Forms

Roofs should be designed for functionality and should enhance or complement the overall architectural design of the building.

- Select roof forms, pitches and materials that are consistent with the architectural style of the building. Consider roof forms in relationship to the building mass to improve massing relief along public streets and on other publicly visible elevations.

- Varied roof forms, offsets and materials consistent with the building’s architectural style are encouraged to create variation in the skyline and diversity in the streetscene.

- Keep roof forms simple and efficient based on the architectural style and plan shape. Avoid overly complicated roof design that detracts from the characteristics of the architectural style.

Architectural Enhancements

To activate the community streetscape and maintain a dynamic and aesthetic edge along open space corridors, the elevations of buildings that are visible from the streets, pathways and park should be enhanced with appropriate architectural treatments. The enhanced articulation may be achieved in the following ways:

- Enhanced window treatments, such as shutters and trim surrounds
- Offset wall planes (horizontally or vertically)
- Roof plane breaks
- Color and/or material blocking
- Other detailing similar to those used on the front elevation such as decorative metal elements, gable roof end vents, stucco grids, etc.

Colors and Materials

The selection and application of building colors and materials are key considerations when creating visually interesting neighborhoods. Below are the guidelines for the Specific Plan area:

- Building and roof materials shall be appropriate to the architectural style of the building. Materials and finishes should be carefully selected for long-term durability and ease of maintenance.
- Appropriate building materials include, but are not limited to, stucco, wood or faux wood sidings, stone and brick veneer, metal for accents and concrete.
- Appropriate roof materials include, but not limited to, concrete "S" tiles, flat shake or slate concrete tiles.
- Highly reflective or shiny materials, florescent colors, neon colors, bright colors as primary body colors (i.e. red, yellow, and blue) are not compatible with the architectural theme and are prohibited.
- Color and material changes should occur on massing elements and terminate on inside corners.
- Body colors should be of earthy or neutral tones such as white, beige and grey, as well as muted blue and green.
- Accent colors should be used to highlight architectural forms, special materials or other distinct architectural features. Accent colors should provide contrast to the body color without conflicting in hue and saturation.

Other colors and materials not listed in this Specific Plan may be used, so long as those combinations are consistent with the architectural theme.

Plan and Elevation Requirements

- A minimum of three floor plans shall be provided for single-family detached homes. A minimum of three different elevation styles shall be provided for each floor plan.
- A minimum of two unit plans shall be provided for each attached building. Individual unit plans may be repeated between building plans. Building plans should be designed with the ability to reverse the plans and/or add elements to corner units.

4.3 Landscape and Open Space Design Guidelines

Landscaping within the Specific Plan area should be compatible with the landscape character of the City of South El Monte and at the same time, provides amenities that support the lifestyle and needs of the Starlite residents. The following guiding principles set forth the general direction for the design of the landscaped spaces within the Specific Plan area:

- All proposed landscaping shall be irrigated with low volume and or point source irrigation and shall meet all requirements of the California Green Building Standards Code (CGBC) and City of South El Monte standards for water efficient landscaping.
- All trees shall be irrigated with separate systems for bubblers.
- Street trees shall be carefully located so as not to obstruct the driver's visibility.
- Street trees should be a 24-inch box minimum in size.
- Low-water use plant materials should be selected to limit irrigation needs and minimize water use. Mediterranean and other local, climate-friendly plants may be used.
- Landscape design should be integrated with building architecture and suitable to the functions of the space. Plant materials should be selected in a manner that complements the architectural styles and building form. Accent planting should be used at entries and key recreation areas.
- Landscaping should be used to screen or separate functional areas from public view, such as trash enclosures, parking areas, storage areas, loading areas, and public utilities. This landscaping should occur upon the project site and not within the right-of-way.
- Decorative paving may be used at key locations including, but not limited to, building entries, courtyards, and vehicular driveways. These areas can be enhanced with tile, brick, pavers, textured and/or colored concrete to provide distinguished direction for pedestrian, cyclist, and vehicular access.
- Pedestrian common spaces are encouraged these should include functional amenities including lounge, dining and fun interactive and relaxation areas. Landscaping should not appear empty or barren.
- Large turfed lawn areas are discouraged.

4.3.1 Conceptual Landscape Plan

The landscaping of the public spaces, including the community entries, street parkways, recreation center, paseo, and open space, is a major component of the overall community design envisioned for Starlite. Complementary to the unifying architectural themes, these landscape places form the heart and soul of the community. The overall landscape design concept is to create a pedestrian-friendly atmosphere that invites residents to walk and enjoy parks and open space and provides connectivity within the community. *Exhibit 4.1, Master Landscape Plan*, provides a detailed rendered view of the overall Specific Plan area and all proposed landscaping and vegetation.

Legend

1. Architecture building
2. Project boundary
3. 4′ wide concrete sidewalk
4. Open play lawn area with shovel cut lawn edge
5. 3′ wide concrete walkway at entry
6. Parking
7. Utility easement area
8. Decorative gateway trellis at paseo walkway
9. Cluster mailbox unit
10. Vehicular entry call box
11. Vehicular gated entry
12. Decorative 6′ bench
13. Pedestrian access gate
14. 42″ high tubular steel fence at private yard along Chico Avenue
15. 6′ high vinyl fence at private yard area
16. 6′ high tubular steel pool fence
17. Community recreation area

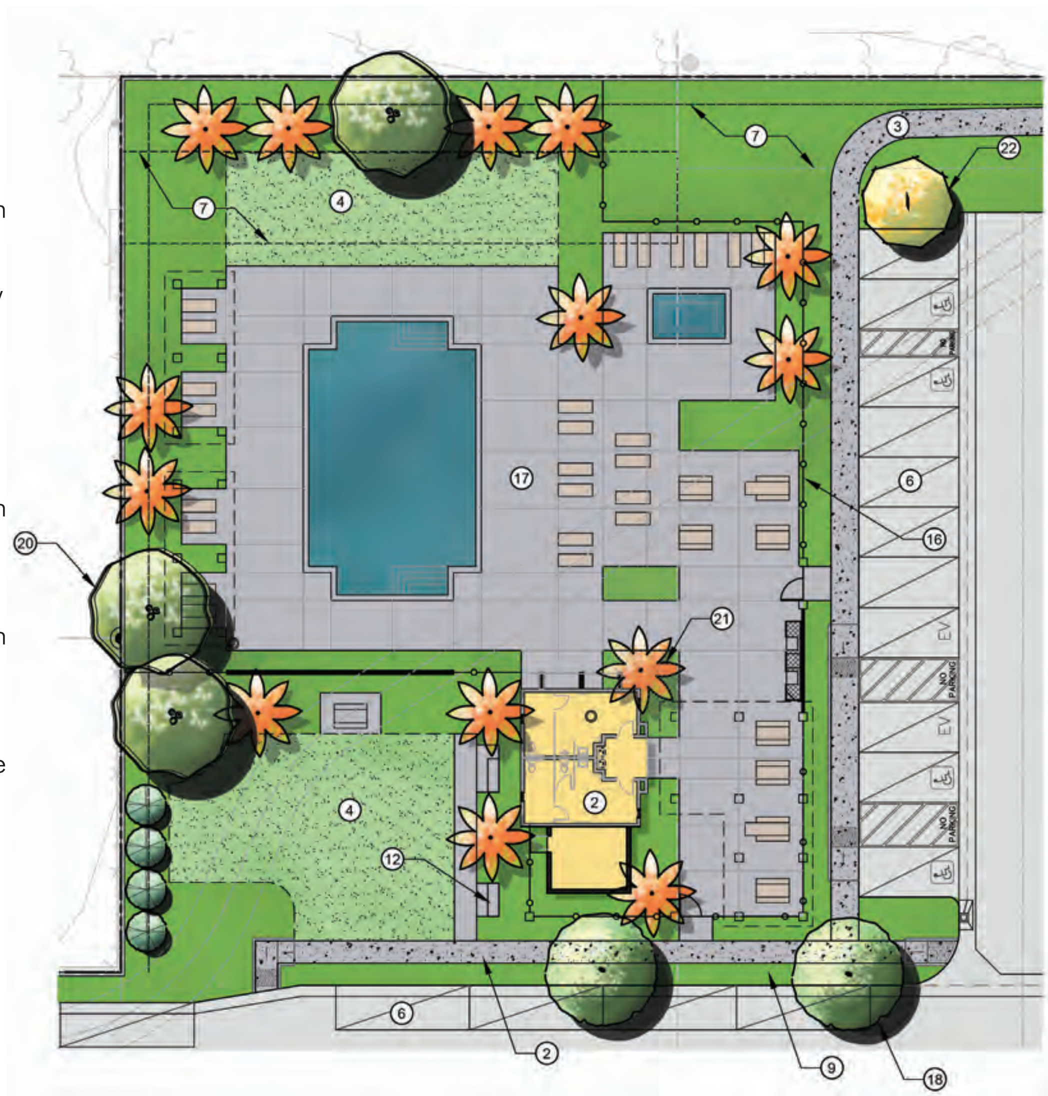
N. T. S.

For illustrative purposes only, final design may vary.

Exhibit 4.1, Master Landscape Plan

This page is intentionally left blank.

The Starlite Specific Plan presents a variety of opportunities for outdoor relaxation, recreation, and activity. These amenity areas may be programmed with an array of features and activity spaces, and shall be distributed throughout the Specific Plan area to ensure that they are easily accessible to all residents within the community.



All landscape and irrigation plans shall be prepared by a licensed California Landscape Architect and shall obtain a landscape permit from South El Monte and meet the standards of SEMMC Section 17.25.050, Water Efficient Landscaping Criteria.

4.3.1.1 Conceptual Recreational Center

A conceptual recreational opportunity is proposed for development at the corner of the Specific Plan area. *Exhibit 4.2, Conceptual Recreation Center*, shows the detailed views of the recreation center. Features of the Conceptual Recreational Center include (but are not limited to):

- Pool/recreation building
- Concrete sidewalk
- Open play lawn area with shovel cut lawn edge
- Decorative bench
- Tubular steel pool fence
- Community recreation area
- Community accent tree
- Large accent /specimen tree
- Vertical accent tree
- Common area theme tree

N. T. S.

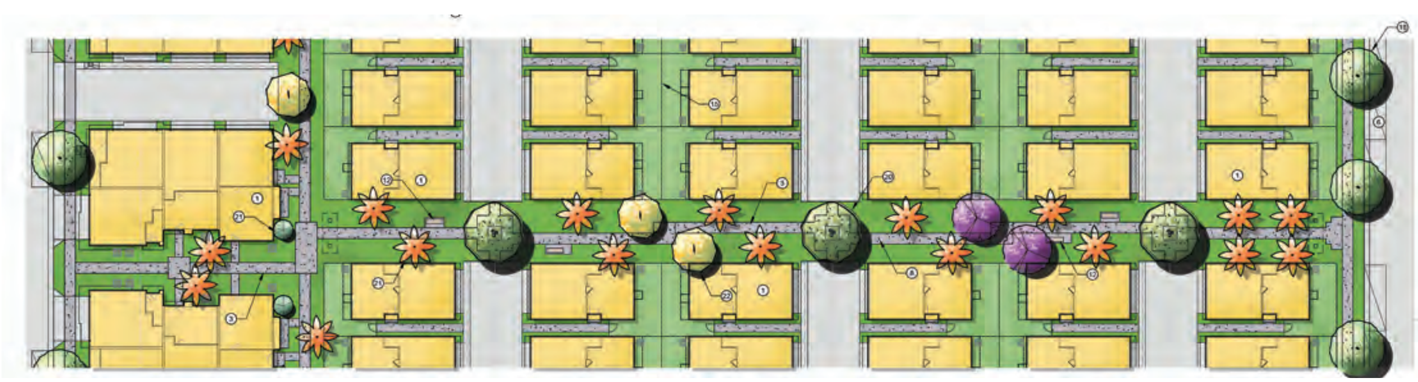

Exhibit 4.2, Conceptual Recreational Center

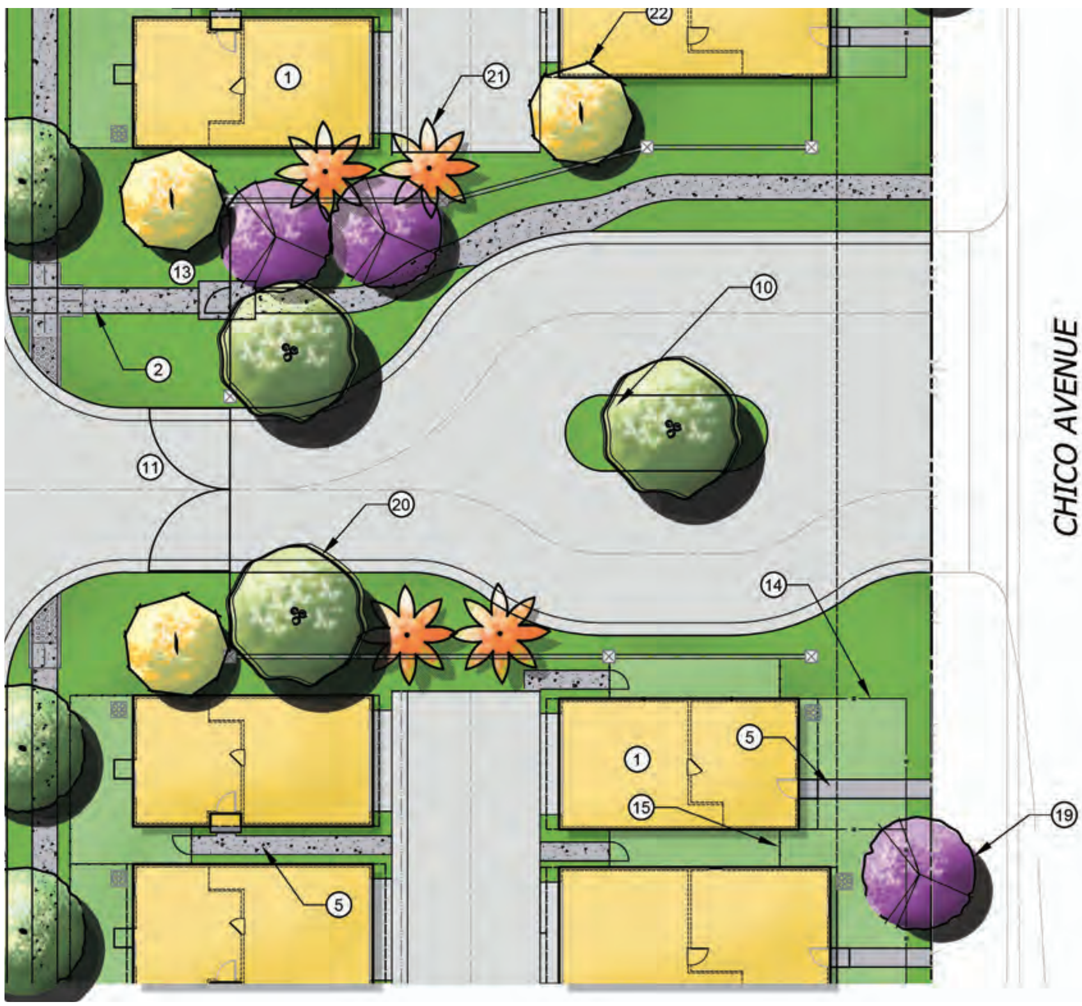
4.3.1.2 Project Entry

Two gated project entries drives will be provided from Rosemead Boulevard and Chico Avenue. Large specimen trees and vertical accent trees will be planted at the vehicular gated entry connecting to Chico Avenue. A vehicular entry call box is centrally located at the entry driveway. Detailed rendered view of the project entry at Chico Avenue is illustrated in *Exhibit 4.3, Project Entry*.

4.3.1.3 Central Paseo



A central paseo is planned as one of the key placemaking elements within the Specific Plan area. The paseo focuses on interior community connections and the pedestrian experience. The entire paseo will be designed to offer Starlite residents a place for strolling, playing, and resting. The central paseo is anticipated to include a walkway with planted nodes, accent trees, enhanced planting, benches, and decorative gateway trellis. Fences will defined private yard areas and a variety of trees will be planted to promote interest.

Representative Example, Central Paseo

LEGEND

1. Residential building

4. Open play lawn area
5. Concrete walkway at entry
10. Vehicular entry call box
11. Vehicular gated entry
14. Tubular steel fence at private yard along Chico Avenue
18. Parkway tree
19. Community accent tree
20. Large accent /specimen tree
21. Vertical accent tree
22. Common area theme tree

For illustrative purposes only, final design may vary.

N. T. S.

Exhibit 4.3, Project Entry

4.3.2 Fencing and Walls

Walls and fences are an important feature of the community. Walls and fences help establish and reinforce the landscape theme, provide for views in and out of a site, attenuate sound, provide security, delineate boundaries, and offer visual and physical privacy. Where such elements face the streets and common open space areas, they should be consistent in style, material, and height, serving as a unifying element throughout the community and maintaining a common theme.

- Perimeter project walls will be constructed of either masonry or tubular steel. Landscaping should be used in front of the masonry wall to soften the mass of the wall.
- Rear and side yard walls and fences may be constructed of wood or vinyl fencing, and shall be a maximum of six (6) feet in height. Walls/fencing in the front yard is typically limited to 42 inches.
- Use of wood or vinyl fencing for patio walls is encouraged. Tubular steel fencing or tubular steel fencing in combination with masonry walls may also be used.
- Tubular steel fencing should be used around the pool area.
- Pedestrian and vehicular gates within the Specific Plan area should be controlled via key fob access points as well as Knox box access.
- Walls, fences and gates shall be designed to be compatible with the architectural themes of the Specific Plan area. Landscaping should be used in combination with walls. Walls and fencing shall be made of attractive, durable, and weather-resistance materials.
- Long expanses of fence or wall surfaces should be articulated with intervening pillars, alternating heights, offsets, or other techniques to avoid visual monotony.

4.3.3 Plant Palette

The plant palette include water-wise plant materials and establishes the intended landscape character for the Specific Plan area. Additional plant materials that are complementary to the following palette may be permitted, provided they are reviewed and approved as part of the City's site plan review process. Recommended trees, shrubs, groundcovers, and vines are listed in *Table 4.1, Landscape Plant Palette*.

Table 4-1
Landscape Plant Palette

Botanical Name	Common Name
Parkway Tree	
GEMERA PARVIFLORA	AUSTRAMAN WILLOW
KOELREUTERIA BIPINNATA	CHINESE FLAME TREE
PISTACIA CHINENSIS	CHINESE PISTACHE
QUERCUS AGRIFOLIA	COAST LIVE OAK
TRISTANIA CONFERTA	BRISBANE BOX
Community Accent Tree	
CALLISTEMON VIMINALIS	WEEPING BOTTLEBRUSH
CHILOPSIS LINEARIS	DESERT WILLOW

DISTICTIS BUCCINATORIA	BLOOD RED TRUMPET VINE
MACFADYENA UNGUIS CATI	CAT’5 CLAW
JASMINUM POLYANTHEMUM	PINK JASMINE

4.4 Sustainability Guidelines

Smart growth is a planning paradigm that advocates thoughtful and sustainable development patterns and avoids urban sprawl to conserve resources, reduce impacts, promote alternatives to single occupancy vehicle use, support livability, offer opportunities for social engagement, and achieve fiscal sustainability. The Starlite Specific Plan embraces the smart growth paradigm. New development in the Specific Plan area will be sustainable designed to conform to the State of California's goals for greenhouse gas reduction, conserving water and energy, and providing sustainable buildings, which in turn will reduce impacts on the environment, enhance the quality of life, and encourage a healthy lifestyle for project residents.

This Specific Plan requires "Green" building practices that meet the California Building Energy Efficiency Standards and CALGreen Building Standards (California Code of Regulations Title 24, Parts 6 and 11) to reduce the impact on the environment, decrease energy costs, and create healthier living through improved indoor air quality and safer building materials. Title 24 sets forth building standard requirements including, but not limited to, planning and site design, energy efficiency, water efficiency and conservation, material conservation and resource efficiency, waste reduction, indoor air quality and pollutant control, thermal comfort, and provisions for bicycle and electric vehicle parking.

All new development within the Specific Plan area is required to meet the rigorous standards of Title 24. The development will be inspected for compliance and will include an operation manual to help end-users maintain and effectively use the sustainable building features provided. Because the concept of sustainability is evolving, it is anticipated that new sustainable strategies may be continually developed during the build-out period of the Specific Plan. Title 24 does not require every efficiency item to be implemented. A certain threshold needs to be met and the developer has the option to choose which items to implement that meet the specified threshold.

4.4.1 Energy Efficiency

The following recommendations are provided to explore opportunities for energy efficiency that could add value to the development within the Specific Plan area:

- Where feasible, utilize passive sustainable design strategies to minimize overall energy consumption needed to heat and cool the building. These strategies include daylighting, natural sources of heating and cooling, operable windows, shading on south facing windows, ceiling fans, well-designed building envelopes with high-U values (insulation rating).

- Encourage coordination with SCE to identify opportunities to optimize energy infrastructure while minimizing cost and avoid barriers that may prevent future entry or expansion of energy efficient systems.

4.4.2 Minimize Heat Island

- Encourage the use of low albedo (reflection coefficient) materials in both paving, roofing and building materials to reflect rather than absorb incoming solar radiation.

4.4.3 Water Efficiency

- Use low-flush toilets, low-flow shower heads and other water conserving fixtures and appliances.
- Use state-of-the-art irrigation controllers and self-closing nozzles on hoses.
- Minimize turf areas within the community.
- Use drought-tolerant plants that require minimal or no irrigation.
- Use reclaimed water for irrigation of common areas, wherever available.
- Implement a landscaping plan with a plant palette that includes trees and major landscaping that will require minimal watering within 3-5 years of maturity.

4.4.4 Materials Efficiency

Where possible, consider selecting sustainable construction materials and products by evaluating characteristics such as reused and recycled content, zero or low off gassing of harmful air emissions, zero or low toxicity, sustainably harvested materials, high recyclability, durability, longevity, and local production. Such products promote resource conservation and efficiency. Using recycled-content products also helps develop markets for recycled materials that are being diverted from California's landfills, as mandated by the Integrated Waste Management Act.

- Use dimensional planning and other material efficiency strategies. These strategies reduce the amount of building materials needed and lower construction costs.
- Incorporate recycled materials, rapidly renewable materials and durable materials into building, landscape and/or infrastructure design, where possible.
- Incorporate regional or locally extracted or manufactured materials, where possible.

DEVELOPMENT REGULATIONS

5.1 General Provisions

This Chapter establishes the permitted uses, development standards and regulations for the planned development within the Starlite Specific Plan area. The regulations and standards contained in this Chapter of the Specific Plan shall supersede those of the South El Monte Municipal Code (SEMMC), unless otherwise stated herein.

In instances of conflicting regulations and standards, the regulations and standards and contained in this Specific Plan shall take precedence over the SEMMC. If this Specific Plan is silent on an issue, then the standards in the SEMMC or other applicable City, state or federal code shall apply, as appropriate. The provisions in this Chapter are not intended to interfere with, abrogate, or annul any easement, covenant, or other agreement between parties.

Where the language in this Specific Plan is undefined, unclear, or vague, the final interpretation and determination shall be made by the Community Development Director, or his/her designee. Any determination by the Community Development Director may be appealed to the Planning Commission. Any determination by the Planning Commission may be appealed to the City Council. All decisions by the City Council shall be deemed final.

5.2 Allowable Development

The Specific Plan permits a maximum of 207 single-family and multi-family residential dwelling units at a density of up to 16.8 dwelling units per acre within the Specific Plan area. Parks, recreation facilities and open space serving the residents within the Specific Plan area are also permitted.

5.3 Permitted Uses within the Specific Plan Area

Permitted uses are identified on *Table 5.1, Starlite Specific Plan Permitted Uses*. Any other use or activity not listed in Table 5.1 may be permitted within the Specific Plan if it is compatible with the intent of the Specific Plan and is similar to a permitted use, subject to approval by the Community Development Director or his/her designee. The Community Development Director may determine to allow the use or may require approval of a Conditional Use Permit, subject to the provisions of Section 17.08.040 of the SEMMC.

Table 5.1
Starlite Specific Plan Permitted Uses

USES	
RESIDENTIAL, SINGLE-FAMILY AND MULTIPLE FAMILY	P
ACCESSORY BUILDINGS AND USES	P
COMMUNITY CARE FACILITIES	P
SMALL DAY CARE FACILITIES FOR NO MORE THAN 8 CHILDREN	P
HOME OCCUPATION	P
MOBILE HOME AND TRAILER	–
ACCESSORY DWELLING UNITS	Pursuant to Chapter 17.38 of the SEMMC
EMERGENCY, TRANSITIONAL AND SUPPORTIVE HOUSING	–
LARGE DAY CARE FOR NO MORE THAN 14 CHILDREN	CUP
PARKS AND RECREATION USES/FACILITIES	P
SCHOOLS, PUBLIC OR PRIVATE	–
INDUSTRIAL USES	–
COMMERCIAL USES	–
AGRICULTURAL USES	–
MODEL HOMES	T

P = PERMITTED BY RIGHT
CUP = CONDITIONAL USE PERMIT REQUIRED (PER CHAPTER 17.08.040 OF THE SEMMC)
T = TEMPORARY USE
– = PROHIBITED

5.4 Development Standards

The property development standards set forth in this Chapter shall apply to all land and buildings located within the confines of the Starlite Specific Plan. For detailed development standards and setbacks, please see *Table 5.2, Starlite Specific Plan Development Standards*.

Table 5.2
Starlite Specific Plan Development Standards

	DETACHED	ATTACHED
MAXIMUM DENSITY	16.8 DU/AC

Two (2) Spaces within Garage; One Guest Parking per 2 Units. Guest parking may be provided in designated parking areas or along internal streets.

1. Projections and encroachments subject to Section 5.5, Allowable and Encroachments and Projections

5.5 Allowable Encroachments and Projections

An encroachment is a permitted projection into a setback. In all cases, all encroachments and projections shall comply with the California Building Code (CBC), as well as other applicable codes and regulations such as the American Disability Act and the SEMMC. The permitted encroachments are discussed below.

1. Architectural elements such as cornices, eaves, belt courses, bay windows, planter boxes, lighting fixtures, canopies, and the like that do not increase the interior floor area may encroach into any setback, provided they are at least three (3) feet from the property line.

2. Awnings may encroach into any required setback up to five (5) feet, provided there are no vertical supports located within the setback area, but may not reduce the setback distance to less than three (3) feet.

3. Landscape elements such as benches, fountains, and other decorative features may encroach into any setback, provided they do not obstruct any path of travel or intersection visibility requirements per Chapter 17.54 of the SEMMC.

4. Mechanical equipment may encroach into any required setback area up to the property line, provided the equipment is screened by landscape or material (e.g. wall) to the maximum extent feasible and allowed by the applicable utility provider.

5. Patio covers and porches may be permitted to encroach up to five (5) feet into any rear setback (measured from post or structural supports).

6. Balconies and exterior stairways may encroach up to five (5) feet into any setback, but shall be at least five (5) feet from any property line (including any posts or structural supports).

7. Accessory buildings are permitted to encroach into a required setback, subject to the provisions of Section 17.26 of the SEMMC.

5.6 Fences and Walls

Walls and fences for the Specific Plan area shall not exceed 6 feet in height. A combination garden and retaining wall may increase the minimum wall height to 8 feet in height. Pilasters and other wall decorative elements are allowed. Tubular steel fence at private yard along Chico Avenue shall be 42 inch in height.

5.7 Signage

Signage within the Specific Plan area shall comply with the design requirements and procedures found within Title 17 of the SEMMC.

Appendix B Air Quality/GHG Modeling

Appendix

This page intentionally left blank.

Air Quality and Greenhouse Gas Appendix

Air Quality and Greenhouse Gas Background and Modeling Data

AIR QUALITY

Climate/Meteorology

SOUTH COAST AIR BASIN

The project site lies in the South Coast Air Basin (SoCAB), which includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties. The SoCAB is in a coastal plain with connecting broad valleys and low hills and is bounded by the Pacific Ocean in the southwest quadrant, with high mountains forming the remainder of the perimeter. The general region lies in the semi-permanent high-pressure zone of the eastern Pacific. As a result, the climate is mild, tempered by cool sea breezes. This usually mild weather pattern is interrupted infrequently by periods of extremely hot weather, winter storms, and Santa Ana winds (South Coast AQMD 2005).

Temperature and Precipitation

The annual average temperature varies little throughout the SoCAB, ranging from the low to middle 60s, measured in degrees Fahrenheit (°F). With a more pronounced oceanic influence, coastal areas show less variability in annual minimum and maximum temperatures than inland areas. The climatological station nearest to the project site with temperature data is the Montebello, California Monitoring Station (ID No. 045790). The lowest average temperature is reported at 47.2°F in December, and the highest average temperature is 89.7°F in August (WRCC 2021).

In contrast to a very steady pattern of temperature, rainfall is seasonally and annually highly variable. Almost all rain falls from October through April. Summer rainfall is normally restricted to widely scattered thundershowers near the coast, with slightly heavier shower activity in the east and over the mountains. Rainfall historically averages 14.78 inches per year in the project area (WRCC 2021).

Humidity

Although the SoCAB has a semiarid climate, the air near the earth's surface is typically moist because of the presence of a shallow marine layer. Except for infrequent periods when dry, continental air is brought into the SoCAB by offshore winds, the "ocean effect" is dominant. Periods of heavy fog, especially along the coast, are frequent. Low clouds, often referred to as high fog, are a characteristic climatic feature. Annual average humidity is 70 percent at the coast and 57 percent in the eastern portions of the (South Coast AQMD 2005).

Wind

Wind patterns across the south coastal region are characterized by westerly or southwesterly onshore winds during the day and by easterly or northeasterly breezes at night. Wind speed is somewhat greater during the dry summer months than during the rainy winter season.

Between periods of wind, periods of air stagnation may occur, both in the morning and evening hours. Air stagnation is one of the critical determinants of air quality conditions on any given day. During the winter and fall months, surface high-pressure systems over the SoCAB, combined with other meteorological conditions, can result in very strong, downslope Santa Ana winds. These winds normally continue a few days before predominant meteorological conditions are reestablished.

The mountain ranges to the east affect the transport and diffusion of pollutants by inhibiting their eastward transport. Air quality in the SoCAB generally ranges from fair to poor and is similar to air quality in most of coastal southern California. The entire region experiences heavy concentrations of air pollutants during prolonged periods of stable atmospheric conditions (South Coast AQMD 2005).

Inversions

In conjunction with the two characteristic wind patterns that affect the rate and orientation of horizontal pollutant transport, there are two similarly distinct types of temperature inversions that control the vertical depth through which pollutants are mixed. These are the marine/subsidence inversion and the radiation inversion. The combination of winds and inversions are critical determinants in leading to the highly degraded air quality in summer and the generally good air quality in the winter in the project area (South Coast AQMD 2005).

Air Quality Regulations

The proposed project has the potential to release gaseous emissions of criteria pollutants and dust into the ambient air; therefore, it falls under the ambient air quality standards promulgated at the local, state, and federal levels. The project site is in the SoCAB and is subject to the rules and regulations imposed by the South Coast Air Quality Management District (South Coast AQMD). However, South Coast AQMD reports to California Air Resources board (CARB), and all criteria emissions are also governed by the California and national Ambient Air Quality Standards (AAQS). Federal, state, regional, and local laws, regulations, plans, or guidelines that are potentially applicable to the proposed project are summarized below.

AMBIENT AIR QUALITY STANDARDS

The Clean Air Act (CAA) was passed in 1963 by the US Congress and has been amended several times. The 1970 Clean Air Act amendments strengthened previous legislation and laid the foundation for the regulatory scheme of the 1970s and 1980s. In 1977, Congress again added several provisions, including nonattainment requirements for areas not meeting National AAQS and the Prevention of Significant Deterioration program. The 1990 amendments represent the latest in a series of federal efforts to regulate the protection of air quality in the United States. The CAA allows states to adopt more stringent standards or to include other pollution species. The California Clean Air Act (CCAA), signed into law in 1988, requires all areas of the state to achieve

and maintain the California AAQS by the earliest practical date. The California AAQS tend to be more restrictive than the National AAQS, based on even greater health and welfare concerns.

These National AAQS and California AAQS are the levels of air quality considered to provide a margin of safety in the protection of the public health and welfare. They are designed to protect "sensitive receptors" most susceptible to further respiratory distress, such as asthmatics, the elderly, very young children, people already weakened by other disease or illness, and persons engaged in strenuous work or exercise. Healthy adults can tolerate occasional exposure to air pollutant concentrations considerably above these minimum standards before adverse effects are observed.

Both California and the federal government have established health-based AAQS for seven air pollutants. As shown in Table 1, these pollutants include ozone (O_3), nitrogen dioxide (NO_2), carbon monoxide (CO), sulfur dioxide (SO_2), coarse inhalable particulate matter (PM_{10}), fine inhalable particulate matter ($PM_{2.5}$), and lead (Pb). In addition, the state has set standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. These standards are designed to protect the health and welfare of the populace with a reasonable margin of safety.

Table 1 Ambient Air Quality Standards for Criteria Pollutants

Pollutant	Averaging Time	California Standard[1]	Federal Primary Standard[2]	Major Pollutant Sources
Ozone (O_3)[3]	1 hour	0.09 ppm	*	Motor vehicles, paints, coatings, and solvents.
	8 hours	0.070 ppm	0.070 ppm	
Carbon Monoxide (CO)	1 hour	20 ppm	35 ppm	Internal combustion engines, primarily gasoline-powered motor vehicles.
	8 hours	9.0 ppm	9 ppm	
Nitrogen Dioxide (NO_2)	Annual Arithmetic Mean	0.030 ppm	0.053 ppm	Motor vehicles, petroleum-refining operations, industrial sources, aircraft, ships, and railroads.
	1 hour	0.18 ppm	0.100 ppm	
Sulfur Dioxide (SO_2)	Annual Arithmetic Mean	*	0.030 ppm	Fuel combustion, chemical plants, sulfur recovery plants, and metal processing.
	1 hour	0.25 ppm	0.075 ppm	
	24 hours	0.04 ppm	0.14 ppm	
Respirable Coarse Particulate Matter (PM_{10})	Annual Arithmetic Mean	20 $\mu g/m^3$	*	Dust and fume-producing construction, industrial, and agricultural operations, combustion, atmospheric photochemical reactions, and natural activities (e.g., wind-raised dust and ocean sprays).
	24 hours	50 $\mu g/m^3$	150 $\mu g/m^3$	
Respirable Fine Particulate Matter ($PM_{2.5}$)[4]	Annual Arithmetic Mean	12 $\mu g/m^3$	12 $\mu g/m^3$	Dust and fume-producing construction, industrial, and agricultural operations, combustion, atmospheric photochemical reactions, and natural activities (e.g., wind-raised dust and ocean sprays).
	24 hours	*	35 $\mu g/m^3$	

Table 1 Ambient Air Quality Standards for Criteria Pollutants

Pollutant	Averaging Time	California Standard[1]	Federal Primary Standard[2]	Major Pollutant Sources
Lead (Pb)	30-Day Average	1.5 μg/m^3	*	Present source: lead smelters, battery manufacturing & recycling facilities. Past source: combustion of leaded gasoline.
	Calendar Quarter	*	1.5 μg/m^3	
	Rolling 3-Month Average	*	0.15 μg/m^3	
Sulfates (SO_4)[5]	24 hours	25 μg/m^3	*	Industrial processes.
Visibility Reducing Particles	8 hours	ExCo =0.23/km visibility of 10≥ miles	No Federal Standard	Visibility-reducing particles consist of suspended particulate matter, which is a complex mixture of tiny particles that consists of dry solid fragments, solid cores with liquid coatings, and small droplets of liquid. These particles vary greatly in shape, size and chemical composition, and can be made up of many different materials such as metals, soot, soil, dust, and salt.
Hydrogen Sulfide	1 hour	0.03 ppm	No Federal Standard	Hydrogen sulfide (H_2S) is a colorless gas with the odor of rotten eggs. It is formed during bacterial decomposition of sulfur-containing organic substances. Also, it can be present in sewer gas and some natural gas and can be emitted as the result of geothermal energy exploitation.
Vinyl Chloride	24 hours	0.01 ppm	No Federal Standard	Vinyl chloride (chloroethene), a chlorinated hydrocarbon, is a colorless gas with a mild, sweet odor. Most vinyl chloride is used to make polyvinyl chloride (PVC) plastic and vinyl products. Vinyl chloride has been detected near landfills, sewage plants, and hazardous waste sites, due to microbial breakdown of chlorinated solvents.

Source: CARB 2016.
Notes: ppm: parts per million; μg/m^3: micrograms per cubic meter
* Standard has not been established for this pollutant/duration by this entity.
1 California standards for O_3, CO (except 8-hour Lake Tahoe), SO_2 (1 and 24 hour), NO_2, and particulate matter (PM_{10}, $PM_{2.5}$, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.
2 National standards (other than O_3, PM, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The O_3 standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM_{10}, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 μg/m^3 is equal to or less than one. For $PM_{2.5}$, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard.
3 On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.
4 On December 14, 2012, the national annual $PM_{2.5}$ primary standard was lowered from 15 μg/m^3 to 12.0 μg/m^3. The existing national 24-hour $PM_{2.5}$ standards (primary and secondary) were retained at 35 μg/m^3, as was the annual secondary standard of 15 μg/m^3. The existing 24-hour PM_{10} standards (primary and secondary) of 150 μg/m^3 also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.
5 On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. The 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

California has also adopted a host of other regulations that reduce criteria pollutant emissions, including:

- AB 1493: Pavley Fuel Efficiency Standards
- Title 20 California Code of Regulations (CCR): Appliance Energy Efficiency Standards
- Title 24, Part 6, CCR: Building and Energy Efficiency Standards

- Title 24, Part 11, CCR: Green Building Standards Code

CRITERIA AIR POLLUTANTS

The air pollutants emitted into the ambient air by stationary and mobile sources are regulated by federal and state law. Air pollutants are categorized as primary or secondary pollutants. Primary air pollutants are those that are emitted directly from sources and include CO, VOC, NO_2, SO_X, PM_{10}, $PM_{2.5}$, and Pb. Of these, CO, SO_2, NO_2, PM_{10}, and $PM_{2.5}$ are "criteria air pollutants," which means that ambient air quality standards (AAQS) have been established for them. VOC and oxides of nitrogen (NO_x) are air pollutant precursors that form secondary criteria pollutants through chemical and photochemical reactions in the atmosphere. Ozone (O_3) and NO_2 are the principal secondary pollutants. A description of each of the primary and secondary criteria air pollutants and their known health effects is presented below.

Carbon Monoxide (CO) is a colorless, odorless, toxic gas produced by incomplete combustion of carbon substances, such as gasoline or diesel fuel. CO is a primary criteria air pollutant. CO concentrations tend to be the highest during winter mornings with little to no wind, when surface-based inversions trap the pollutant at ground levels. Because CO is emitted directly from internal combustion, engines and motor vehicles operating at slow speeds are the primary source of CO in the SoCAB. The highest ambient CO concentrations are generally found near traffic-congested corridors and intersections. The primary adverse health effect associated with CO is interference with normal oxygen transfer to the blood, which may result in tissue oxygen deprivation (South Coast AQMD 2005, USEPA 2021). The SoCAB is designated as being in attainment under the California AAQS and attainment (serious maintenance) under the National AAQS (CARB 2019).

Volatile Organic Compounds (VOC) are compounds composed primarily of atoms of hydrogen and carbon. Internal combustion associated with motor vehicle usage is the major source of hydrocarbons. Other sources of VOCs include evaporative emissions associated with the use of paints and solvents, the application of asphalt paving, and the use of household consumer products such as aerosols. There are no ambient air quality standards established for VOCs. However, because they contribute to the formation of ozone (O_3), South Coast AQMD has established a significance threshold for this pollutant (South Coast AQMD 2005).

Nitrogen Oxides (NO_x) are a byproduct of fuel combustion and contribute to the formation of O_3, PM_{10}, and $PM_{2.5}$. The two major forms of NO_x are nitric oxide (NO) and nitrogen dioxide (NO_2). The principal form of NO_2 produced by combustion is NO, but NO reacts with oxygen to form NO_2, creating the mixture of NO and NO_2 commonly called NO_x. NO_2 acts as an acute irritant and, in equal concentrations, is more injurious than NO. At atmospheric concentrations, however, NO_2 is only potentially irritating. There is some indication of a relationship between NO_2 and chronic pulmonary fibrosis. Some increase in bronchitis in children (two and three years old) has also been observed at concentrations below 0.3 part per million (ppm). NO_2 absorbs blue light; the result is a brownish-red cast to the atmosphere and reduced visibility. NO is a colorless, odorless gas formed from atmospheric nitrogen and oxygen when combustion takes place under high temperature and/or high pressure (South Coast AQMD 2005, USEPA 2021). The SoCAB is designated as an attainment (maintenance) area under the National AAQS and attainment area under the California AAQS (CARB 2019).

Sulfur Dioxide (SO_2) is a colorless, pungent, irritating gas formed by the combustion of sulfurous fossil fuels. It enters the atmosphere as a result of burning high-sulfur-content fuel oils and coal and from chemical processes at chemical plants and refineries. Gasoline and natural gas have very low sulfur content and do not release significant quantities of SO_2 (South Coast AQMD 2005, USEPA 2021). When sulfur dioxide forms sulfates (SO_4) in the atmosphere, together these pollutants are referred to as sulfur oxides (SO_X). Thus, SO_2 is both a primary and secondary criteria air pollutant. At sufficiently high concentrations, SO_2 may irritate the upper respiratory tract. At lower concentrations and when combined with particulates, SO_2 may do greater harm by injuring lung tissue. The SoCAB is designated as attainment under the California and National AAQS (CARB 2019).

Suspended Particulate Matter (PM_{10} and $PM_{2.5}$) consists of finely divided solids or liquids such as soot, dust, aerosols, fumes, and mists. Two forms of fine particulates are now recognized and regulated. Inhalable coarse particles, or PM_{10}, include the particulate matter with an aerodynamic diameter of 10 microns (i.e., 10 millionths of a meter or 0.0004 inch) or less. Inhalable fine particles, or $PM_{2.5}$, have an aerodynamic diameter of 2.5 microns (i.e., 2.5 millionths of a meter or 0.0001 inch) or less. Particulate discharge into the atmosphere results primarily from industrial, agricultural, construction, and transportation activities. However, wind action on arid landscapes also contributes substantially to local particulate loading (i.e., fugitive dust). Both PM_{10} and $PM_{2.5}$ may adversely affect the human respiratory system, especially in people who are naturally sensitive or susceptible to breathing problems (South Coast AQMD 2005).

The US Environmental Protection Agency's (EPA) scientific review concluded that $PM_{2.5}$, which penetrates deeply into the lungs, is more likely than PM_{10} to contribute to health effects and at concentrations that extend well below those allowed by the current PM_{10} standards. These health effects include premature death and increased hospital admissions and emergency room visits (primarily the elderly and individuals with cardiopulmonary disease); increased respiratory symptoms and disease (children and individuals with cardiopulmonary disease such as asthma); decreased lung functions (particularly in children and individuals with asthma); and alterations in lung tissue and structure and in respiratory tract defense mechanisms (South Coast AQMD 2005). There has been emerging evidence that even smaller particulates with an aerodynamic diameter of <0.1 microns or less (i.e., ≤0.1 millionths of a meter or <0.000004 inch), known as ultrafine particulates (UFPs), have human health implications, because UFPs toxic components may initiate or facilitate biological processes that may lead to adverse effects to the heart, lungs, and other organs (South Coast AQMD 2013). However, the EPA or CARB have yet to adopt AAQS to regulate these particulates. Diesel particulate matter (DPM) is classified by the CARB as a carcinogen (CARB 1998). Particulate matter can also cause environmental effects such as visibility impairment,[1] environmental damage,[2] and aesthetic damage[3] (South Coast AQMD 2005; USEPA 2021). The SoCAB is in nonattainment and serious nonattainment for $PM_{2.5}$ under the California

---

1 $PM_{2.5}$ is the main cause of reduced visibility (haze) in parts of the United States.

2 Particulate matter can be carried over long distances by wind and then settle on ground or water, making lakes and streams acidic; changing the nutrient balance in coastal waters and large river basins; depleting the nutrients in soil; damaging sensitive forests and farm crops; and affecting the diversity of ecosystems.

3 Particulate matter can stain and damage stone and other materials, including culturally important objects such as statues and monuments.

and National AAQS, respectively. For PM_{10}, the SoCAB is nonattainment under the California AAQS and in attainment (serious maintenance) under the National AAQS (CARB 2019).[4]

Ozone (O_3) is commonly referred to as "smog" and is a gas that is formed when VOCs and NO_x, both by-products of internal combustion engine exhaust, undergo photochemical reactions in the presence of sunlight. O_3 is a secondary criteria air pollutant. O_3 concentrations are generally highest during the summer months when direct sunlight, light winds, and warm temperatures create favorable conditions for the formation of this pollutant. O_3 poses a health threat to those who already suffer from respiratory diseases as well as to healthy people. Breathing O_3 can trigger a variety of health problems, including chest pain, coughing, throat irritation, and congestion. It can worsen bronchitis, emphysema, and asthma. Ground-level O_3 also can reduce lung function and inflame the linings of the lungs. Repeated exposure may permanently scar lung tissue. O_3 also affects sensitive vegetation and ecosystems, including forests, parks, wildlife refuges, and wilderness areas. In particular, O_3 harms sensitive vegetation during the growing season (South Coast AQMD 2005; USEPA 2021). The SoCAB is designated as extreme nonattainment under the National AAQS (8-hour) and as nonattainment under the California AAQS (1-hour and 8-hour). (CARB 2019).

Lead (Pb) is a metal found naturally in the environment as well as in manufactured products. Once taken into the body, lead distributes throughout the body in the blood and accumulates in the bones. Depending on the level of exposure, lead can adversely affect the nervous system, kidney function, immune system, reproductive and developmental systems, and the cardiovascular system. Lead exposure also affects the oxygen-carrying capacity of the blood. The effects of lead most commonly encountered in current populations are neurological effects in children and cardiovascular effects in adults (e.g., high blood pressure and heart disease). Infants and young children are especially sensitive to even low levels of lead, which may contribute to behavioral problems, learning deficits, and lowered IQ (South Coast AQMD 2005; USEPA 2021). The major sources of lead emissions have historically been mobile and industrial sources. As a result of the EPA's regulatory efforts to remove lead from gasoline, emissions of lead from the transportation sector dramatically declined by 95 percent between 1980 and 1999, and levels of lead in the air decreased by 94 percent between 1980 and 1999. Today, the highest levels of lead in air are usually found near lead smelters. The major sources of lead emissions today are ore and metals processing and piston-engine aircraft operating on leaded aviation gasoline. However, in 2008 the EPA and CARB adopted stricter lead standards, and special monitoring sites immediately downwind of lead sources recorded very localized violations of the new state and federal standards.[5] As a result of these violations, the Los Angeles County portion of the SoCAB is designated nonattainment under the National AAQS for lead (South Coast AQMD 2012; CARB 2019). Because emissions of lead are found only in projects that are permitted by South Coast AQMD, lead is not a pollutant of concern for the project.

[4] CARB approved the South Coast AQMD's request to redesignate the SoCAB from serious nonattainment for PM_{10} to attainment for PM_{10} under the National AAQS on March 25, 2010, because the SoCAB did not violate federal 24-hour PM_{10} standards from 2004 to 2007. The EPA approved the State of California's request to redesignate the South Coast PM_{10} nonattainment area to attainment of the PM_{10} National AAQS, effective on July 26, 2013.

[5] Source-oriented monitors record concentrations of lead at lead-related industrial facilities in the SoCAB, which include Exide Technologies in the City of Commerce; Quemetco, Inc., in the City of Industry; Trojan Battery Company in Santa Fe Springs; and Exide Technologies in Vernon. Monitoring conducted between 2004 through 2007 showed that the Trojan Battery Company and Exide Technologies exceed the federal standards (South Coast AQMD 2012).

TOXIC AIR CONTAMINANTS

The public's exposure to air pollutants classified as toxic air contaminants (TACs) is a significant environmental health issue in California. In 1983, the California Legislature enacted a program to identify the health effects of TACs and to reduce exposure to these contaminants to protect the public health. The California Health and Safety Code defines a TAC as "an air pollutant which may cause or contribute to an increase in mortality or in serious illness, or which may pose a present or potential hazard to human health." A substance that is listed as a hazardous air pollutant (HAP) pursuant to Section 112(b) of the federal Clean Air Act (42 United States Code §7412[b]) is a toxic air contaminant. Under state law, the California Environmental Protection Agency (Cal/EPA), acting through CARB, is authorized to identify a substance as a TAC if it determines that the substance is an air pollutant that may cause or contribute to an increase in mortality or to an increase in serious illness, or may pose a present or potential hazard to human health.

California regulates TACs primarily through Assembly Bill (AB) 1807 (Tanner Air Toxics Act) and AB 2588 (Air Toxics "Hot Spot" Information and Assessment Act of 1987). The Tanner Air Toxics Act sets forth a formal procedure for CARB to designate substances as TACs. Once a TAC is identified, CARB adopts an "airborne toxics control measure" for sources that emit designated TACs. If there is a safe threshold for a substance (i.e., a point below which there is no toxic effect), the control measure must reduce exposure to below that threshold. If there is no safe threshold, the measure must incorporate toxics best available control technology to minimize emissions. To date, CARB has established formal control measures for 11 TACs, all of which are identified as having no safe threshold.

Air toxics from stationary sources are also regulated in California under the Air Toxics "Hot Spot" Information and Assessment Act of 1987. Under AB 2588, toxic air contaminant emissions from individual facilities are quantified and prioritized by the air quality management district or air pollution control district. High priority facilities are required to perform a health risk assessment and, if specific thresholds are exceeded, are required to communicate the results to the public in the form of notices and public meetings.

By the last update to the TAC list in December 1999, CARB had designated 244 compounds as TACs (CARB 1999). Additionally, CARB has implemented control measures for a number of compounds that pose high risks and show potential for effective control. The majority of the estimated health risks from TACs can be attributed to relatively few compounds, the most important being particulate matter from diesel-fueled engines.

Diesel Particulate Matter

In 1998, CARB identified particulate emissions from diesel-fueled engines (diesel PM) as a TAC. Previously, the individual chemical compounds in diesel exhaust were considered TACs. Almost all diesel exhaust particle mass is 10 microns or less in diameter. Because of their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lung.

CARB has promulgated the following specific rules to limit TAC emissions:

- 13 CCR Chapter 10, Section 2485, Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling

- 13 CCR Chapter 10, Section 2480, Airborne Toxic Control Measure to Limit School Bus Idling and Idling at Schools
- 13 CCR Section 2477 and Article 8, Airborne Toxic Control Measure for In-Use Diesel-Fueled Transport Refrigeration Units (TRU) and TRU Generator Sets and Facilities Where TRUs Operate

Community Risk

In addition, to reduce exposure to TACs, CARB developed and approved the *Air Quality and Land Use Handbook: A Community Health Perspective* (2005) to provide guidance regarding the siting of sensitive land uses in the vicinity of freeways, distribution centers, rail yards, ports, refineries, chrome-plating facilities, dry cleaners, and gasoline-dispensing facilities. This guidance document was developed to assess compatibility and associated health risks when placing sensitive receptors near existing pollution sources. CARB's recommendations on the siting of new sensitive land uses were based on a compilation of recent studies that evaluated data on the adverse health effects from proximity to air pollution sources. The key observation in these studies is that proximity to air pollution sources substantially increases exposure and the potential for adverse health effects. There are three carcinogenic toxic air contaminants that constitute the majority of the known health risks from motor vehicle traffic, DPM from trucks, and benzene and 1,3-butadiene from passenger vehicles. CARB recommendations are based on data that show that localized air pollution exposures can be reduced by as much as 80 percent by following CARB minimum distance separations.

Multiple Airborne Toxics Exposure Study (MATES)

The Multiple Air Toxics Exposure Study (MATES) is a monitoring and evaluation study on ambient concentrations of TACs and estimated the potential health risks from air toxics in the SoCAB. In 2008, South Coast AQMD conducted its third update to the MATES study (MATES III). The results showed that the overall risk for excess cancer from a lifetime exposure to ambient levels of air toxics was about 1,200 in a million. The largest contributor to this risk was diesel exhaust, accounting for 84 percent of the cancer risk (South Coast AQMD 2008b).

South Coast AQMD recently released the fourth update (MATES IV). The results showed that the overall monitored risk for excess cancer from a lifetime exposure to ambient levels of air toxics decreased to approximately 418 in one million. Compared to the 2008 MATES III, monitored excess cancer risks decreased by approximately 65 percent. Approximately 90 percent of the risk is attributed to mobile sources while 10 percent is attributed to TACs from stationary sources, such as refineries, metal processing facilities, gas stations, and chrome plating facilities. The largest contributor to this risk was diesel exhaust, accounting for approximately 68 percent of the air toxics risk. Compared to MATES III, MATES IV found substantial improvement in air quality and associated decrease in air toxics exposure. As a result, the estimated basin-wide population-weighted risk decreased by approximately 57 percent compared to the analysis done for the MATES III time period (South Coast AQMD 2015a).

The Office of Environmental Health Hazard Assessment (OEHHA) updated the guidelines for estimating cancer risks on March 6, 2015. The new method utilizes higher estimates of cancer potency during early life exposures, which result in a higher calculation of risk. There are also differences in the assumptions on

breathing rates and length of residential exposures. When combined together, South Coast AQMD estimates that risks for a given inhalation exposure level will be about 2.7 times higher using the proposed updated methods identified in MATES IV (e.g., 2.7 times higher than 418 in one million overall excess cancer risk) (South Coast AQMD 2015a).

Air Quality Management Planning

The South Coast AQMD is the agency responsible for preparing the air quality management plan (AQMP) for the SoCAB in coordination with the Southern California Association of Governments (SCAG). Since 1979, a number of AQMPs have been prepared.

2016 AQMP

On March 3, 2017, the South Coast AQMD adopted the 2016 AQMP as an update to the 2012 AQMP. The 2016 AQMP addresses strategies and measures to attain the following National AAQS:

- 2008 National 8-hour ozone standard by 2031,
- 2012 National annual $PM_{2.5}$ standard by 2025[6],
- 2006 National 24-hour $PM_{2.5}$ standard by 2019,
- 1997 National 8-hour ozone standard by 2023, and the
- 1979 National 1-hour ozone standard by year 2022.

It is projected that total NO_X emissions in the SoCAB would need to be reduced to 150 tons per day (tpd) by year 2023 and to 100 tpd in year 2031 to meet the 1997 and 2008 federal 8-hour ozone standards. The strategy to meet the 1997 federal 8-hour ozone standard would also lead to attaining the 1979 federal 1-hour ozone standard by year 2022 (South Coast AQMD 2017), which requires reducing NO_X emissions in the SoCAB to 250 tpd. This is approximately 45 percent additional reductions above existing regulations for the 2023 ozone standard and 55 percent additional reductions above existing regulations to meet the 2031 ozone standard.

Reducing NO_X emissions would also reduce $PM_{2.5}$ concentrations in the SoCAB. However, as the goal is to meet the 2012 federal annual $PM_{2.5}$ standard no later than year 2025, South Coast AQMD is seeking to reclassify the SoCAB from "moderate" to "serious" nonattainment under this federal standard. A "moderate" non-attainment would require meeting the 2012 federal standard by no later than 2021.

Overall, the 2016 AQMP is composed of stationary and mobile-source emission reductions from regulatory control measures, incentive-based programs, co-benefits from climate programs, mobile-source strategies, and reductions from federal sources such as aircrafts, locomotives, and ocean-going vessels. Strategies outlined in the 2016 AQMP would be implemented in collaboration between CARB and the EPA (South Coast AQMD 2017).

[6] The 2016 AQMP requests a reclassification from moderate to serious non-attainment for the 2012 National $PM_{2.5}$ standard.

LEAD STATE IMPLEMENTATION PLAN

In 2008, EPA designated the Los Angeles County portion of the SoCAB nonattainment under the federal lead (Pb) classification due to the addition of source-specific monitoring under the new federal regulation. This designation was based on two source-specific monitors in Vernon and the City of Industry exceeding the new standard. The rest of the SoCAB, outside the Los Angeles County nonattainment area remains in attainment of the new standard. On May 24, 2012, CARB approved the SIP revision for the federal lead standard, which the EPA revised in 2008. Lead concentrations in this nonattainment area have been below the level of the federal standard since December 2011. The SIP revision was submitted to EPA for approval.

AREA DESIGNATIONS

The AQMP provides the framework for air quality basins to achieve attainment of the state and federal ambient air quality standards through the State Implementation Plan (SIP). Areas are classified as attainment or nonattainment areas for particular pollutants, depending on whether they meet ambient air quality standards. Severity classifications for ozone nonattainment range in magnitude from marginal, moderate, and serious to severe and extreme.

- **Unclassified:** a pollutant is designated unclassified if the data are incomplete and do not support a designation of attainment or nonattainment.
- **Attainment:** a pollutant is in attainment if the CAAQS for that pollutant was not violated at any site in the area during a three-year period.
- **Nonattainment:** a pollutant is in nonattainment if there was at least one violation of a state AAQS for that pollutant in the area.
- **Nonattainment/Transitional:** a subcategory of the nonattainment designation. An area is designated nonattainment/transitional to signify that the area is close to attaining the AAQS for that pollutant.

The attainment status for the SoCAB is shown in Table 2. The SoCAB is designated in attainment of the California AAQS for sulfates. The SoCAB is designated as nonattainment for lead (Los Angeles County only) under the National AAQS.

Table 2 Attainment Status of Criteria Pollutants in the South Coast Air Basin

Pollutant	State	Federal
Ozone – 1-hour	Nonattainment	No Federal Standard
Ozone – 8-hour	Nonattainment	Extreme Nonattainment
PM_{10}	Nonattainment	Attainment (Serious Maintenance)
$PM_{2.5}$	Nonattainment	Nonattainment[1]
CO	Attainment	Attainment
NO_2	Attainment	Attainment (Maintenance)
SO_2	Attainment	Attainment
Lead	Attainment	Nonattainment (Los Angeles County only)[2]

Table 2 Attainment Status of Criteria Pollutants in the South Coast Air Basin

Pollutant	State	Federal
All others	Attainment/Unclassified	Attainment/Unclassified

Source: CARB 2019.
1 The South Coast AQMD is seeking to reclassify the SoCAB from "moderate" to "serious" nonattainment under federal $PM_{2.5}$ standard.
2 In 2010, the Los Angeles portion of the SoCAB was designated nonattainment for lead under the new federal and existing state AAQS as a result of large industrial emitters. Remaining areas in the SoCAB are unclassified.

Existing Ambient Air Quality

Existing levels of ambient air quality and historical trends and projections in the vicinity of the project site are best documented by measurements taken by the South Coast AQMD. The project site is located within Source Receptor Area (SRA) 11 – South San Gabriel Valley. The air quality monitoring station closest to the project site is the Pico Rivera-4144 San Gabriel Monitoring Station, which monitors O_3, NO_x, and $PM_{2.5}$. Information regarding PM_{10} is supplemented by data from the Azusa Monitoring Station. The most current five years of data from these monitoring stations are included in Table 3, *Ambient Air Quality Monitoring Summary*. The data show regular violations of the state and federal O_3, state PM_{10}, and federal $PM_{2.5}$ standards in the last five years.

Table 3 Ambient Air Quality Monitoring Summary

Pollutant/Standard	Number of Days Threshold Were Exceeded and Maximum Levels during Such Violations				
	2015	2016	2017	2018	2019
Ozone (O_3)[1]					
State 1-Hour ≥ 0.09 ppm (days exceed threshold)	6	9	7	3	5
State 8-hour ≥ 0.07 ppm (days exceed threshold)	11	6	9	5	7
Federal 8-Hour > 0.075 ppm (days exceed threshold)	2	2	4	2	3
Max. 1-Hour Conc. (ppm)	0.107	0.111	0.118	0.115	0.108
Max. 8-Hour Conc. (ppm)	0.081	0.081	0.086	0.082	0.091
Nitrogen Dioxide (NO_2)[1]					
State 1-Hour ≥ 0.18 ppm (days exceed threshold)	0	0	0	0	0
Federal 1-Hour ≥ 0.100 ppm (days exceed threshold)	0	0	0	0	0
Max. 1-Hour Conc. (ppb)	0.0704	0.0632	0.0750	0.0768	0.0618
Coarse Particulates (PM_{10})[1]					
State 24-Hour > 50 µg/m³ (days exceed threshold)	12	12	7	10	4
Federal 24-Hour > 150 µg/m³ (days exceed threshold)	0	0	0	0	0
Max. 24-Hour Conc. (µg/m³)	101.0	74.0	83.9	78.3	82.0
Fine Particulates ($PM_{2.5}$)[1]					
Federal 24-Hour > 35 µg/m³ (days exceed threshold)	3	2	1	2	1
Max. 24-Hour Conc. (µg/m³)	52.7	46.5	49.5	56.3	50.2

Source: CARB 2021.
ppm: parts per million; parts per billion, µg/m³: micrograms per cubic meter
Notes: * Data not available.

Sensitive Receptors

Some land uses are considered more sensitive to air pollution than others due to the types of population groups or activities involved. Sensitive population groups include children, the elderly, the acutely ill, and the chronically ill, especially those with cardio-respiratory diseases.

Residential areas are also considered to be sensitive receptors to air pollution because residents (including children and the elderly) tend to be at home for extended periods of time, resulting in sustained exposure to any pollutants present. Schools are also considered sensitive receptors, as children are present for extended durations and engage in regular outdoor activities. Recreational land uses are considered moderately sensitive to air pollution. Although exposure periods are generally short, exercise places a high demand on respiratory functions, which can be impaired by air pollution. In addition, noticeable air pollution can detract from the enjoyment of recreation. Industrial and commercial areas are considered the least sensitive to air pollution. Exposure periods are relatively short and intermittent, as the majority of the workers tend to stay indoors most of the time. In addition, the working population is generally the healthiest segment of the public. The nearest sensitive receptors to the proposed project site are the residences along Marybeth Avenue to the north.

Methodology

Projected construction-related air pollutant emissions are calculated using the California Emissions Estimator Model (CalEEMod), Version 2016.3.2.25. CalEEMod compiles an emissions inventory of construction (fugitive dust, off-gas emissions, on-road emissions, and off-road emissions), area sources, indirect emissions from energy use, mobile sources, indirect emissions from waste disposal (annual only), and indirect emissions from water/wastewater (annual only) use. The calculated emissions of the project are compared to thresholds of significance for individual projects using the South Coast AQMD's *CEQA Air Quality Analysis Guidance Handbook*.

Thresholds of Significance

The analysis of the proposed project's air quality impacts follows the guidance and methodologies recommended in South Coast AQMD's *CEQA Air Quality Handbook* and the significance thresholds on South Coast AQMD's website (South Coast AQMD 1993). CEQA allows the significance criteria established by the applicable air quality management or air pollution control district to be used to assess impacts of a project on air quality. South Coast AQMD has established thresholds of significance for regional air quality emissions for construction activities and project operation. In addition to the daily thresholds listed above, projects are also subject to the AAQS. These are addressed though an analysis of localized CO impacts and localized significance thresholds (LSTs).

REGIONAL SIGNIFICANCE THRESHOLDS

The South Coast AQMD has adopted regional construction and operational emissions thresholds to determine a project's cumulative impact on air quality in the SoCAB. Table 4 lists South Coast AQMD's regional significance thresholds that are applicable for all projects uniformly regardless of size or scope. There is growing evidence that although ultrafine particulates contribute a very small portion of the overall atmospheric

mass concentration, they represent a greater proportion of the health risk from PM. However, the EPA or CARB have not yet adopted AAQS to regulate ultrafine particulates; therefore, South Coast AQMD has not developed thresholds for them.

Table 4 South Coast AQMD Significance Thresholds

Air Pollutant	Construction Phase	Operational Phase
Reactive Organic Gases (ROGs)/ Volatile Organic Compounds (VOCs)	75 lbs/day	55 lbs/day
Nitrogen Oxides (NO_X)	100 lbs/day	55 lbs/day
Carbon Monoxide (CO)	550 lbs/day	550 lbs/day
Sulfur Oxides (SO_X)	150 lbs/day	150 lbs/day
Particulates (PM_{10})	150 lbs/day	150 lbs/day
Particulates ($PM_{2.5}$)	55 lbs/day	55 lbs/day

Source: South Coast AQMD 2019.

Projects that exceed the regional significance threshold contribute to the nonattainment designation of the SoCAB. The attainment designations are based on the AAQS, which are set at levels of exposure that are determined to not result in adverse health. Exposure to fine particulate pollution and ozone causes myriad health impacts, particularly to the respiratory and cardiovascular systems:

- Linked to increased cancer risk ($PM_{2.5}$, TACs)
- Aggravates respiratory disease (O_3, $PM_{2.5}$)
- Increases bronchitis (O_3, $PM_{2.5}$)
- Causes chest discomfort, throat irritation, and increased effort to take a deep breath (O_3)
- Reduces resistance to infections and increases fatigue (O_3)
- Reduces lung growth in children ($PM_{2.5}$)
- Contributes to heart disease and heart attacks ($PM_{2.5}$)
- Contributes to premature death (O_3, $PM_{2.5}$)
- Linked to lower birth weight in newborns ($PM_{2.5}$) (South Coast AQMD 2015b)

Exposure to fine particulates and ozone aggravates asthma attacks and can amplify other lung ailments such as emphysema and chronic obstructive pulmonary disease. Exposure to current levels of $PM_{2.5}$ is responsible for an estimated 4,300 cardiopulmonary-related deaths per year in the SoCAB. In addition, University of Southern California scientists responsible for a landmark children's health study found that lung growth improved as air pollution declined for children aged 11 to 15 in five communities in the SoCAB (South Coast AQMD 2015c).

Mass emissions in Table 4 are not correlated with concentrations of air pollutants but contribute to the cumulative air quality impacts in the SoCAB. Therefore, regional emissions from a single project do not single-handedly trigger a regional health impact. South Coast AQMD is the primary agency responsible for ensuring the health and welfare of sensitive individuals to elevated concentrations of air quality in the SoCAB. To achieve the health-based standards established by the EPA, South Coast AQMD prepares an AQMP that details regional programs to attain the AAQS.

CO HOTSPOTS

Areas of vehicle congestion have the potential to create pockets of CO called hot spots. These pockets have the potential to exceed the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm. Because CO is produced in greatest quantities from vehicle combustion and does not readily disperse into the atmosphere, adherence to ambient air quality standards is typically demonstrated through an analysis of localized CO concentrations. Hot spots are typically produced at intersections, where traffic congestion is highest because vehicles queue for longer periods and are subject to reduced speeds. With the turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities, CO concentrations in the SoCAB and in the state have steadily declined.

In 2007, the SoCAB was designated in attainment for CO under both the California AAQS and National AAQS. The CO hot spot analysis conducted for the attainment by the South Coast AQMD for busiest intersections in Los Angeles during the peak morning and afternoon periods plan did not predict a violation of CO standards.[7] As identified in the South Coast AQMD's 2003 AQMP and the 1992 Federal Attainment Plan for Carbon Monoxide (1992 CO Plan), peak carbon monoxide concentrations in the SoCAB in previous years, prior to redesignation, were a result of unusual meteorological and topographical conditions and not a result of congestion at a particular intersection. Under existing and future vehicle emission rates, a project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour—or 24,000 vehicles per hour where vertical and/or horizontal air does not mix—in order to generate a significant CO impact (BAAQMD 2017).

LOCALIZED SIGNIFICANCE THRESHOLDS

The South Coast AQMD developed LSTs for emissions of NO_2, CO, PM_{10}, and $PM_{2.5}$ generated at the project site (offsite mobile-source emissions are not included in the LST analysis). LSTs represent the maximum emissions at a project site that are not expected to cause or contribute to an exceedance of the most stringent federal or state AAQS and are shown in Table 5.

[7] The four intersections were: Long Beach Boulevard and Imperial Highway; Wilshire Boulevard and Veteran Avenue; Sunset Boulevard and Highland Avenue; and La Cienega Boulevard and Century Boulevard. The busiest intersection evaluated (Wilshire and Veteran) had a daily traffic volume of approximately 100,000 vehicles per day with LOS E in the morning peak hour and LOS F in the evening peak hour.

Table 5 South Coast AQMD Localized Significance Thresholds

Air Pollutant (Relevant AAQS)	Concentration
1-Hour CO Standard (CAAQS)	20 ppm
8-Hour CO Standard (CAAQS)	9.0 ppm
1-Hour NO_2 Standard (CAAQS)	0.18 ppm
Annual NO_2 Standard (CAAQS)	0.03 ppm
24-Hour PM_{10} Standard – Construction (South Coast AQMD)[1]	10.4 μg/m^3
24-Hour $PM_{2.5}$ Standard – Construction (South Coast AQMD)[1]	10.4 μg/m^3
24-Hour PM_{10} Standard – Operation (South Coast AQMD)[1]	2.5 μg/m^3
24-Hour $PM_{2.5}$ Standard – Operation (South Coast AQMD)[1]	2.5 μg/m^3

Source: South Coast AQMD 2019.
ppm – parts per million; μg/m^3 – micrograms per cubic meter
1 Threshold is based on South Coast AQMD Rule 403. Since the SoCAB is in nonattainment for PM_{10} and $PM_{2.5}$, the threshold is established as an allowable change in concentration. Therefore, background concentration is irrelevant.

To assist lead agencies, South Coast AQMD developed screening-level LSTs to back-calculate the mass amount (lbs. per day) of emissions generated onsite that would trigger the levels shown in Table 5 for projects under 5-acres. These "screening-level" LSTs tables are the localized significance thresholds for all projects of five acres and less; however, it can be used as screening criteria for larger projects to determine whether or not dispersion modeling may be required to compare concentrations of air pollutants generated by the project to the localized concentrations shown in Table 5.

In accordance with South Coast AQMD's LST methodology, the screening-level construction LSTs are based on the acreage disturbed per day based on equipment use. The screening-level construction LSTs for the project site in SRA 11 are shown in Table 6, *South Coast AQMD Screening-Level Construction Localized Significance Thresholds,* for sensitive receptors within 82 feet (25 meters).

Table 6 South Coast AQMD Screening-Level Construction Localized Significance Thresholds

	Threshold (lbs/day)[1]			
Acreage Disturbed	Nitrogen Oxides (NO_X)	Carbon Monoxide (CO)	Coarse Particulates (PM_{10})	Fine Particulates ($PM_{2.5}$)
≤1.00 Acre Disturbed Per Day	81	485	9.75	3.72
1.31 Acres Disturbed Per Day	92	557	11.50	4.26
2.50 Acres Disturbed Per Day	126	805	18.07	5.94
3.50 Acres Disturbed Per Day	149	984	23.52	6.94

Source: South Coast AQMD 2008a and 2011.
1 LSTs are based on receptors within 82 feet (25 meters) in SRA 11.

Because the project is not an industrial project that has the potential to emit substantial sources of stationary emissions, operational LSTs are not an air quality impact of concern associated with the project.

Health Risk

Whenever a project would require use of chemical compounds that have been identified in South Coast AQMD Rule 1401, placed on CARB's air toxics list pursuant to AB 1807, or placed on the EPA's National Emissions

Standards for Hazardous Air Pollutants, a health risk assessment is required by the South Coast AQMD. Table 7, *Toxic Air Contaminants Incremental Risk Thresholds*, lists the TAC incremental risk thresholds for operation of a project. The purpose of this environmental evaluation is to identify the significant effects of the proposed project on the environment, not the significant effects of the environment on the proposed project. (*California Building Industry Association v. Bay Area Air Quality Management District (2015) 62 Cal.4th 369 (Case No. S213478)*). CEQA does not require CEQA-level environmental document to analyze the environmental effects of attracting development and people to an area. However, the environmental document must analyze the impacts of environmental hazards on future users, when a proposed project exacerbates an existing environmental hazard or condition. Residential, commercial, and office uses do not use substantial quantities of TACs and typically do not exacerbate existing hazards, so these thresholds are typically applied to new industrial projects.

Table 7 South Coast AQMD Toxic Air Contaminants Incremental Risk Thresholds

Maximum Incremental Cancer Risk	≥ 10 in 1 million
Hazard Index (project increment)	≥ 1.0
Cancer Burden in areas ≥ 1 in 1 million	> 0.5 excess cancer cases

Source: South Coast AQMD 2019.

GREENHOUSE GAS EMISSIONS

Scientists have concluded that human activities are contributing to global climate change by adding large amounts of heat-trapping gases, known as GHG, to the atmosphere. Climate change is the variation of Earth's climate over time, whether due to natural variability or as a result of human activities. The primary source of these GHG is fossil fuel use. The Intergovernmental Panel on Climate Change (IPCC) has identified four major GHG—water vapor,[8] carbon (CO_2), methane (CH_4), and ozone (O_3)—that are the likely cause of an increase in global average temperatures observed within the 20th and 21st centuries. Other GHG identified by the IPCC that contribute to global warming to a lesser extent include nitrous oxide (N_2O), sulfur hexafluoride (SF_6), hydrofluorocarbons, perfluorocarbons, and chlorofluorocarbons (IPCC 2001).[9] The major GHG are briefly described below.

- **Carbon dioxide (CO_2)** enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, and respiration, and also as a result of other chemical reactions

[8] Water vapor (H_2O) is the strongest GHG and the most variable in its phases (vapor, cloud droplets, ice crystals). However, water vapor is not considered a pollutant, but part of the feedback loop rather than a primary cause of change.

[9] Black carbon contributes to climate change both directly, by absorbing sunlight, and indirectly, by depositing on snow (making it melt faster) and by interacting with clouds and affecting cloud formation. Black carbon is the most strongly light-absorbing component of particulate matter (PM) emitted from burning fuels such as coal, diesel, and biomass. Reducing black carbon emissions globally can have immediate economic, climate, and public health benefits. California has been an international leader in reducing emissions of black carbon, with close to 95 percent control expected by 2020 due to existing programs that target reducing PM from diesel engines and burning activities (CARB 2017a). However, state and national GHG inventories do not yet include black carbon due to ongoing work resolving the precise global warming potential of black carbon. Guidance for CEQA documents does not yet include black carbon.

(e.g. manufacture of cement). Carbon dioxide is removed from the atmosphere (sequestered) when it is absorbed by plants as part of the biological carbon cycle.

- **Methane (CH_4)** is emitted during the production and transport of coal, natural gas, and oil. Methane emissions also result from livestock and other agricultural practices and from the decay of organic waste in municipal landfills and water treatment facilities.
- **Nitrous oxide (N_2O)** is emitted during agricultural and industrial activities as well as during combustion of fossil fuels and solid waste.
- **Fluorinated gases** are synthetic, strong GHGs that are emitted from a variety of industrial processes. Fluorinated gases are sometimes used as substitutes for ozone-depleting substances. These gases are typically emitted in smaller quantities, but because they are potent GHGs, they are sometimes referred to as high global-warming-potential (GWP) gases.
  - ***Chlorofluorocarbons (CFCs***) are GHGs covered under the 1987 Montreal Protocol and used for refrigeration, air conditioning, packaging, insulation, solvents, or aerosol propellants. Since they are not destroyed in the lower atmosphere (troposphere, stratosphere), CFCs drift into the upper atmosphere where, given suitable conditions, they break down ozone. These gases are also ozone-depleting gases and are therefore being replaced by other compounds that are GHGs covered under the Kyoto Protocol.
  - ***Perfluorocarbons (PFCs)*** are a group of human-made chemicals composed of carbon and fluorine only. These chemicals (predominantly perfluoromethane [CF_4] and perfluoroethane [C_2F_6]) were introduced as alternatives, along with HFCs, to the ozone-depleting substances. In addition, PFCs are emitted as by-products of industrial processes and are used in manufacturing. PFCs do not harm the stratospheric ozone layer, but they have a high global warming potential.
  - ***Sulfur Hexafluoride (SF_6)*** is a colorless gas soluble in alcohol and ether, slightly soluble in water. SF_6 is a strong GHG used primarily in electrical transmission and distribution systems as an insulator.
  - ***Hydrochlorofluorocarbons (HCFCs)*** contain hydrogen, fluorine, chlorine, and carbon atoms. Although ozone-depleting substances, they are less potent at destroying stratospheric ozone than CFCs. They have been introduced as temporary replacements for CFCs and are also GHGs.
  - ***Hydrofluorocarbons (HFCs)*** contain only hydrogen, fluorine, and carbon atoms. They were introduced as alternatives to ozone-depleting substances to serve many industrial, commercial, and personal needs. HFCs are emitted as by-products of industrial processes and are also used in manufacturing. They do not significantly deplete the stratospheric ozone layer, but they are strong GHGs (IPCC 2001; USEPA 2020).

GHGs are dependent on the lifetime or persistence of the gas molecule in the atmosphere. Some GHGs have stronger greenhouse effects than others. These are referred to as high GWP gases. The GWP of GHG emissions are shown in Table 8. The GWP is used to convert GHGs to CO_2-equivalence (CO_2e) to show the

relative potential that different GHGs have to retain infrared radiation in the atmosphere and contribute to the greenhouse effect. For example, under IPCC's Fourth Assessment Report (AR4) GWP values for CH_4, a project that generates 10 metric tons (MT) of CH_4 would be equivalent to 250 MT of CO_2 (IPCC 2007).

Table 8 GHG Emissions and Their Relative Global Warming Potential Compared to CO_2

GHGs	Second Assessment Report Atmospheric Lifetime (Years)	Fourth Assessment Report Atmospheric Lifetime (Years)	Second Assessment Report Global Warming Potential Relative to CO_2[1]	Fourth Assessment Report Global Warming Potential Relative to CO_2[1]
Carbon Dioxide (CO_2)	50 to 200	50 to 200	1	1
Methane[2] (CH_4)	12 (±3)	12	21	25
Nitrous Oxide (N_2O)	120	114	310	298
Hydrofluorocarbons:				
HFC-23	264	270	11,700	14,800
HFC-32	5.6	4.9	650	675
HFC-125	32.6	29	2,800	3,500
HFC-134a	14.6	14	1,300	1,430
HFC-143a	48.3	52	3,800	4,470
HFC-152a	1.5	1.4	140	124
HFC-227ea	36.5	34.2	2,900	3,220
HFC-236fa	209	240	6,300	9,810
HFC-4310mee	17.1	15.9	1,300	1,030
Perfluoromethane: CF_4	50,000	50,000	6,500	7,390
Perfluoroethane: C_2F_6	10,000	10,000	9,200	12,200
Perfluorobutane: C_4F_{10}	2,600	NA	7,000	8,860
Perfluoro-2-methylpentane: C_6F_{14}	3,200	NA	7,400	9,300
Sulfur Hexafluoride (SF_6)	3,200	NA	23,900	22,800

Source: IPCC 1995, 2007, 2013.
Notes:
1 The methane GWP includes direct effects and indirect effects due to the production of tropospheric ozone and stratospheric water vapor. The indirect effect due to the production of CO_2 is not included.
2 Based on 100-year time horizon of the GWP of the air pollutant compared to CO_2.
3 The GWP values in the IPCC's Fifth Assessment Report (2013) reflect new information on atmospheric lifetimes of GHGs and an improved calculation of the radiative forcing of CO_2. However, South Coast AQMD uses the AR4 GWP values to maintain consistency in statewide GHG emissions modeling. In addition, the 2017 Scoping Plan Update was based on the AR4 GWP values.

California's Greenhouse Gas Sources and Relative Contribution

In 2020, the statewide GHG emissions inventory was updated for 2000 to 2018 emissions using the GWPs in IPCC's AR4.[10] Based on these GWPs, California produced 425.3 $MMTCO_2e$ GHG emissions in 2018. California's transportation sector was the single largest generator of GHG emissions, producing 39.9 percent of the state's total emissions. Industrial sector emissions made up 21.0 percent, and electric power generation made up 14.8 percent of the state's emissions inventory. Other major sectors of GHG emissions include

10 Methodology for determining the statewide GHG inventory is not the same as the methodology used to determine statewide GHG emissions under Assembly Bill 32 (2006).

commercial and residential (9.7 percent), agriculture and forestry (7.7 percent) high GWP (4.8 percent), and recycling and waste (2.1 percent) (CARB 2020a).

Since the peak level in 2004, California statewide GHG emissions dropped below the 2020 GHG limit of 431 $MMCO_2e$ in 2016 and have remained below the 2020 GHG limit since then. In 2018, emissions from routine GHG emitting activities statewide were 6 $MMTCO_2e$ lower than the 2020 GHG limit. Per capita GHG emissions in California have dropped from a 2001 peak of 14.0 $MTCO_2e$ per person to 10.7 $MTCO_2e$ per person in 2018, a 24 percent decrease. Transportation emissions decreased in 2018 compared to the previous year, which is the first year over year decrease since 2013. Since 2008, California's electricity sector has followed an overall downward trend in emissions. In 2018, solar power generation has continued its rapid growth since 2013. Emissions from high-GWP gases increased 2.3 percent in 2018 (2000-2018 average year-over-year increase is 6.8 percent), continuing the increasing trend as they replace Ozone Depleting Substances (ODS) being phased out under the 1987 Montreal Protocol. Overall trends in the inventory also demonstrate that the carbon intensity of California's economy (the amount of carbon pollution per million dollars of gross domestic product (GDP)) is declining, representing a 43 percent decline since the 2001 peak, while the state's GDP has grown 59 percent during this period (CARB 2020a).

Regulatory Settings

REGULATION OF GHG EMISSIONS ON A NATIONAL LEVEL

The US Environmental Protection Agency (EPA) announced on December 7, 2009, that GHG emissions threaten the public health and welfare of the American people and that GHG emissions from on-road vehicles contribute to that threat. The EPA's final findings respond to the 2007 U.S. Supreme Court decision that GHG emissions fit within the Clean Air Act definition of air pollutants. The findings do not in and of themselves impose any emission reduction requirements but allow the EPA to finalize the GHG standards proposed in 2009 for new light-duty vehicles as part of the joint rulemaking with the Department of Transportation (USEPA 2009).

To regulate GHGs from passenger vehicles, EPA was required to issue an endangerment finding. The finding identifies emissions of six key GHGs—CO_2, CH_4, N_2O, hydrofluorocarbons, perfluorocarbons, and SF_6—that have been the subject of scrutiny and intense analysis for decades by scientists in the United States and around the world. The first three are applicable to the project's GHG emissions inventory because they constitute the majority of GHG emissions and, per South Coast AQMD guidance, are the GHG emissions that should be evaluated as part of a project's GHG emissions inventory.

US Mandatory Report Rule for GHGs (2009)

In response to the endangerment finding, the EPA issued the Mandatory Reporting of GHG Rule that requires substantial emitters of GHG emissions (large stationary sources, etc.) to report GHG emissions data. Facilities that emit 25,000 MT or more of CO_2 per year are required to submit an annual report.

Update to Corporate Average Fuel Economy Standards (2017 to 2026)

The federal government issued new Corporate Average Fuel Economy (CAFE) standards in 2012 for model years 2017 to 2025, which required a fleet average of 54.5 miles per gallon in 2025. On March 30, 2020, the EPA finalized an updated CAFE and GHG emissions standards for passenger cars and light trucks and established new standards covering model years 2021 through 2026, known as the Safer Affordable Fuel Efficient (SAFE) Vehicles Final Rule for Model Years 2021 to 2026. However, in May 2020, California and 22 other states; the District of Columbia; the cities of Los Angeles, Denver, and New York; and the counties of San Francisco and Denver filed a lawsuit with the U.S. Court of Appeals for the District of Columbia Circuit, challenging the SAFE Rule. To date, a ruling has not been made on the lawsuit. In addition, a consortium of automakers and California have agreed on a voluntary framework to reduce emissions that can serve as an alternative path forward for clean vehicle standards nationwide. Automakers who agreed to the framework are Ford, Honda, BMW of North America, and Volkswagen Group of America. The framework supports continued annual reductions of vehicle GHG emissions through the 2026 model year, encourages innovation to accelerate the transition to electric vehicles, and gives industry the certainty needed to make investments and create jobs. This commitment means that the auto companies which are party to the voluntary agreement will only sell cars in the United States that meet these standards (CARB 2020b).

EPA Regulation of Stationary Sources under the Clean Air Act (Ongoing)

Pursuant to its authority under the Clean Air Act, the EPA has been developing regulations for new, large, stationary sources of emissions, such as power plants and refineries. Under former President Obama's 2013 Climate Action Plan, the EPA was directed to develop regulations for existing stationary sources as well. On June 19, 2019, the EPA issued the final Affordable Clean Energy (ACE) rule which became effective on August 19, 2019. The ACE rule was crafted under the direction of President Trump's Energy Independence Executive Order. It officially rescinds the Clean Power Plan rule issued during the Obama Administration and sets emissions guidelines for states in developing plans to limit CO_2 emissions from coal-fired power plants.

REGULATION OF GHG EMISSIONS ON A STATE LEVEL

Current State of California guidance and goals for reductions in GHG emissions are generally embodied in Executive Order S-3-05, Executive Order B-30-15, Assembly Bill 32 (AB 32), Senate Bill 32 (SB 32) and Senate Bill 375 (SB 375).

Executive Order S-3-05

Executive Order S-3-05, signed June 1, 2005. Executive Order S-3-05 set the following GHG reduction targets for the State:

- 2000 levels by 2010
- 1990 levels by 2020
- 80 percent below 1990 levels by 2050

Assembly Bill 32, the Global Warming Solutions Act (2006)

Current State of California guidance and goals for reductions in GHG emissions are generally embodied in AB 32. AB 32 was passed by the California state legislature on August 31, 2006, to place the state on a course toward reducing its contribution of GHG emissions. AB 32 follows the 2020 tier of emissions reduction targets established in Executive Order S-03-05.

CARB 2008 Scoping Plan

The final Scoping Plan was adopted by CARB on December 11, 2008. The *2008 Scoping Plan* identified that GHG emissions in California are anticipated to be approximately 596 $MMTCO_2e$ in 2020. In December 2007, CARB approved a 2020 emissions limit of 427 $MMTCO_2e$ (471 million tons) for the state (CARB 2008). In order to effectively implement the emissions cap, AB 32 directed CARB to establish a mandatory reporting system to track and monitor GHG emissions levels for large stationary sources that generate more than 25,000 $MTCO_2e$ per year, prepare a plan demonstrating how the 2020 deadline can be met, and develop appropriate regulations and programs to implement the plan by 2012.

First Update to the Scoping Plan

CARB completed a five-year update to the 2008 Scoping Plan, as required by AB 32. The First Update to the Scoping Plan was adopted at the May 22, 2014, board hearing. The update highlights California's progress toward meeting the near-term 2020 GHG emission reduction goals defined in the original 2008 Scoping Plan. As part of the update, CARB recalculated the 1990 GHG emission levels with the updated AR4 GWPs, and the 427 $MMTCO_2e$ 1990 emissions level and 2020 GHG emissions limit, established in response to AB 32, is slightly higher at 431 $MMTCO_2e$ (CARB 2014).

As identified in the Update to the Scoping Plan, California is on track to meeting the goals of AB 32. However, the update also addresses the state's longer-term GHG goals within a post-2020 element. The post-2020 element provides a high-level view of a long-term strategy for meeting the 2050 GHG goals, including a recommendation for the state to adopt a midterm target. According to the Update to the Scoping Plan, local government reduction targets should chart a reduction trajectory that is consistent with or exceeds the trajectory created by statewide goals (CARB 2014). CARB identified that reducing emissions to 80 percent below 1990 levels will require a fundamental shift to efficient, clean energy in every sector of the economy. Progressing toward California's 2050 climate targets will require significant acceleration of GHG reduction rates. Emissions from 2020 to 2050 will have to decline several times faster than the rate needed to reach the 2020 emissions limit (CARB 2014).

Executive Order B-30-15

Executive Order B-30-15, signed April 29, 2015, sets a goal of reducing GHG emissions in the state to 40 percent of 1990 levels by year 2030. Executive Order B-30-15 also directs CARB to update the Scoping Plan to quantify the 2030 GHG reduction goal for the state and requires state agencies to implement measures to meet the interim 2030 goal as well as the long-term goal for 2050 in Executive Order S-03-05. It also requires the Natural Resources Agency to conduct triennial updates of the California adaption strategy, Safeguarding California, in order to ensure climate change is accounted for in state planning and investment decisions.

Senate Bill 32 and Assembly Bill 197

In September 2016, Governor Brown signed SB 32 and AB 197 into law, making the Executive Order goal for year 2030 into a statewide mandated legislative target. AB 197 established a joint legislative committee on climate change policies and requires the CARB to prioritize direction emissions reductions rather than the market-based cap-and-trade program for large stationary, mobile, and other sources.

2017 Climate Change Scoping Plan Update

Executive Order B-30-15 and SB 32 required CARB to prepare another update to the Scoping Plan to address the 2030 target for the state. On December 24, 2017, CARB adopted the 2017 Climate Change Scoping Plan Update, which outlines potential regulations and programs, including strategies consistent with AB 197 requirements, to achieve the 2030 target. The 2017 Scoping Plan establishes a new emissions limit of 260 $MMTCO_2e$ for the year 2030, which corresponds to a 40 percent decrease in 1990 levels by 2030 (CARB 2017c).

California's climate strategy will require contributions from all sectors of the economy, including enhanced focus on zero- and near-zero emission (ZE/NZE) vehicle technologies; continued investment in renewables, such as solar roofs, wind, and other types of distributed generation; greater use of low carbon fuels; integrated land conservation and development strategies; coordinated efforts to reduce emissions of short-lived climate pollutants (methane, black carbon, and fluorinated gases); and an increased focus on integrated land use planning, to support livable, transit-connected communities and conservation of agricultural and other lands. Requirements for GHG reductions at stationary sources complement local air pollution control efforts by the local air districts to tighten criteria air pollutants and TACs emissions limits on a broad spectrum of industrial sources. Major elements of the 2017 Scoping Plan framework include:

- Implementing and/or increasing the standards of the Mobile Source Strategy, which include increasing ZEV buses and trucks;
- Low Carbon Fuel Standard (LCFS), with an increased stringency (18 percent by 2030).
- Implementation of SB 350, which expands the Renewables Portfolio Standard (RPS) to 50 percent RPS and doubles energy efficiency savings by 2030.
- California Sustainable Freight Action Plan, which improves freight system efficiency, utilizes near-zero emissions technology, and deployment of ZEV trucks.
- Implementing the Short-Lived Climate Pollutant Strategy (SLPS), which focuses on reducing methane and hydrofluorocarbon emissions by 40 percent and anthropogenic black carbon emissions by 50 percent by year 2030.
- Post-2020 Cap-and-Trade Program that includes declining caps.
- Continued implementation of SB 375.

- Development of a Natural and Working Lands Action Plan to secure California's land base as a net carbon sink.

In addition to the statewide strategies listed above, the 2017 Climate Change Scoping Plan also identified local governments as essential partners in achieving the State's long-term GHG reduction goals and identified local actions to reduce GHG emissions. As part of the recommended actions, CARB recommends statewide targets of no more than 6 $MTCO_2e$ or less per capita by 2030 and 2 $MTCO_2e$ or less per capita by 2050. CARB recommends that local governments evaluate and adopt robust and quantitative locally-appropriate goals that align with the statewide per capita targets and the State's sustainable development objectives and develop plans to achieve the local goals. The statewide per capita goals were developed by applying the percent reductions necessary to reach the 2030 and 2050 climate goals (i.e., 40 percent and 80 percent, respectively) to the State's 1990 emissions limit established under AB 32. For CEQA projects, CARB states that lead agencies have discretion to develop evidenced-based numeric thresholds (mass emissions, per capita, or per service population)—consistent with the Scoping Plan and the state's long-term GHG goals. To the degree a project relies on GHG mitigation measures, CARB recommends that lead agencies prioritize on-site design features that reduce emissions, especially from VMT, and direct investments in GHG reductions within the project's region that contribute potential air quality, health, and economic co-benefits. Where further project design or regional investments are infeasible or not proven to be effective, CARB recommends mitigating potential GHG impacts through purchasing and retiring carbon credits.

The Scoping Plan scenario is set against what is called the business-as-usual (BAU) yardstick—that is, what would the GHG emissions look like if the State did nothing at all beyond the existing policies that are required and already in place to achieve the 2020 limit, as shown in Table 9. It includes the existing renewables requirements, advanced clean cars, the "10 percent" Low Carbon Fuel Standard (LCFS), and the SB 375 program for more vibrant communities, among others. However, it does not include a range of new policies or measures that have been developed or put into statute over the past two years. Also shown in the table, the known commitments are expected to result in emissions that are 60 $MMTCO_2e$ above the target in 2030. If the estimated GHG reductions from the known commitments are not realized due to delays in implementation or technology deployment, the post-2020 Cap-and-Trade Program would deliver the additional GHG reductions in the sectors it covers to ensure the 2030 target is achieved.

Table 9 2017 Climate Change Scoping Plan Emissions Reductions Gap

Modeling Scenario	2030 GHG Emissions $MMTCO_2e$
Reference Scenario (Business-as-Usual)	389
With Known Commitments	320
2030 GHG Target	**260**
Gap to 2030 Target	**60**

Notes: TCU = Transportation, Communications, and Utilities; TBD: To Be Determined.
[1] Work is underway through 2017 to estimate the range of potential sequestration benefits from the natural and working lands sector.

Senate Bill 1383

On September 19, 2016, the Governor signed SB 1383 to supplement the GHG reduction strategies in the Scoping Plan to consider short-lived climate pollutants, including black carbon and CH_4. Black carbon is the light-absorbing component of fine particulate matter produced during incomplete combustion of fuels. SB 1383 requires the state board, no later than January 1, 2018, to approve and begin implementing that comprehensive strategy to reduce emissions of short-lived climate pollutants to achieve a reduction in methane by 40 percent, hydrofluorocarbon gases by 40 percent, and anthropogenic black carbon by 50 percent below 2013 levels by 2030, as specified. The bill also establishes targets for reducing organic waste in landfill. On March 14, 2017, CARB adopted the "Final Proposed Short-Lived Climate Pollutant Reduction Strategy," which identifies the state's approach to reducing anthropogenic and biogenic sources of short-lived climate pollutants. Anthropogenic sources of black carbon include on- and off-road transportation, residential wood burning, fuel combustion (charbroiling), and industrial processes. According to CARB, ambient levels of black carbon in California are 90 percent lower than in the early 1960s despite the tripling of diesel fuel use (CARB 2017b). In-use on-road rules are expected to reduce black carbon emissions from on-road sources by 80 percent between 2000 and 2020. South Coast AQMD is one of the air districts that requires air pollution control technologies for chain-driven broilers, which reduces particulate emissions from these charbroilers by over 80 percent (CARB 2017b). Additionally, South Coast AQMD Rule 445 limits installation of new fireplaces in the SoCAB.

Senate Bill 375

In 2008, SB 375, the Sustainable Communities and Climate Protection Act, was adopted to connect the GHG emissions reductions targets established in the 2008 Scoping Plan for the transportation sector to local land use decisions that affect travel behavior. Its intent is to reduce GHG emissions from light-duty trucks and automobiles (excludes emissions associated with goods movement) by aligning regional long-range transportation plans, investments, and housing allocations to local land use planning to reduce VMT and vehicle

trips. Specifically, SB 375 required CARB to establish GHG emissions reduction targets for each of the 18 metropolitan planning organizations (MPOs). The Southern California Association of Governments (SCAG) is the MPO for the Southern California region, which includes the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial.

Pursuant to the recommendations of the Regional Transportation Advisory Committee, CARB adopted per capita reduction targets for each of the MPOs rather than a total magnitude reduction target. SCAG's targets are an 8 percent per capita reduction from 2005 GHG emission levels by 2020 and a 13 percent per capita reduction from 2005 GHG emission levels by 2035 (CARB 2010). The 2020 targets are smaller than the 2035 targets because a significant portion of the built environment in 2020 has been defined by decisions that have already been made. In general, the 2020 scenarios reflect that more time is needed for large land use and transportation infrastructure changes. Most of the reductions in the interim are anticipated to come from improving the efficiency of the region's transportation network. The targets would result in 3 $MMTCO_2e$ of reductions by 2020 and 15 $MMTCO_2e$ of reductions by 2035. Based on these reductions, the passenger vehicle target in CARB's Scoping Plan (for AB 32) would be met (CARB 2010).

2017 Update to the SB 375 Targets

CARB is required to update the targets for the MPOs every eight years. In June 2017, CARB released updated targets and technical methodology and recently released another update in February 2018. The updated targets consider the need to further reduce VMT, as identified in the 2017 Scoping Plan Update, while balancing the need for additional and more flexible revenue sources to incentivize positive planning and action toward sustainable communities. Like the 2010 targets, the updated SB 375 targets are in units of percent per capita reduction in GHG emissions from automobiles and light trucks relative to 2005. This excludes reductions anticipated from implementation of state technology and fuels strategies and any potential future state strategies such as statewide road user pricing. The proposed targets call for greater per capita GHG emission reductions from SB 375 than are currently in place, which for 2035, translate into proposed targets that either match or exceed the emission reduction levels in the MPOs' currently adopted SCSs. As proposed, CARB staff's proposed targets would result in an additional reduction of over 8 $MMTCO_2e$ in 2035 compared to the current targets. For the next round of SCS updates, CARB's updated targets for the SCAG region are an 8 percent per capita GHG reduction in 2020 from 2005 levels (unchanged from the 2010 target) and a 19 percent per capita GHG reduction in 2035 from 2005 levels (compared to the 2010 target of 13 percent) (CARB 2018). CARB adopted the updated targets and methodology on March 22, 2018. All SCSs adopted after October 1, 2018 are subject to these new targets.

SCAG's Regional Transportation Plan / Sustainable Communities Strategy

SB 375 requires each MPO to prepare a sustainable communities strategy in its regional transportation plan. For the SCAG region, the 2016-2040 Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) was adopted on April 7, 2016, and is an update to the 2012 RTP/SCS (SCAG 2016). SCAG released the draft 2020-2045 RTP/SCS (Connect SoCal) and adopted the plan for the limited purpose of transportation conformity on May 7, 2020 (SCAG 2020). In general, the SCS outlines a development pattern for the region that, when integrated with the transportation network and other transportation measures and policies, would

reduce vehicle miles traveled from automobiles and light duty trucks and thereby reduce GHG emissions from these sources.

Connect SoCal focuses on the continued efforts of the previous RTP/SCSs to integrate transportation and land use strategies in development of the SCAG region through horizon year 2045 (SCAG 2020). Connect SoCal forecasts that the SCAG region will meet its GHG per capita reduction targets of 8 percent by 2020 and 19 percent by 2035. Additionally, Connect SoCal also forecasts that implementation of the plan will reduce VMT per capita in year 2045 by 4.1 percent compared to baseline conditions for that year. Connect SoCal includes a "Core Vision" that centers on maintaining and better managing the transportation network for moving people and goods while expanding mobility choices by locating housing, jobs, and transit closer together and increasing investments in transit and complete streets.

Assembly Bill 1493

California vehicle GHG emission standards were enacted under AB 1493 (Pavley I). Pavley I is a clean-car standard that reduces GHG emissions from new passenger vehicles (light-duty auto to medium-duty vehicles) from 2009 through 2016 and was anticipated to reduce GHG emissions from new passenger vehicles by 30 percent in 2016. California implements the Pavley I standards through a waiver granted to California by the EPA. In 2012, the EPA issued a Final Rulemaking that sets even more stringent fuel economy and GHG emissions standards for model year 2017 through 2025 light-duty vehicles (see also the discussion on the update to the Corporate Average Fuel Economy standards under *Federal Laws*, above). In January 2012, CARB approved the Advanced Clean Cars program (formerly known as Pavley II) for model years 2017 through 2025. The program combines the control of smog, soot, and global warming gases and requirements for greater numbers of zero-emission vehicles into a single package of standards. Under California's Advanced Clean Car program, by 2025, new automobiles will emit 34 percent fewer global warming gases and 75 percent fewer smog-forming emissions.

Executive Order S-01-07

On January 18, 2007, the state set a new LCFS for transportation fuels sold in the state. Executive Order S-01-07 sets a declining standard for GHG emissions measured in carbon dioxide equivalent gram per unit of fuel energy sold in California. The LCFS requires a reduction of 2.5 percent in the carbon intensity of California's transportation fuels by 2015 and a reduction of at least 10 percent by 2020. The standard applies to refiners, blenders, producers, and importers of transportation fuels, and would use market-based mechanisms to allow these providers to choose how they reduce emissions during the "fuel cycle" using the most economically feasible methods.

Senate Bills 1078, 107, X1-2, and Executive Order S-14-08

A major component of California's Renewable Energy Program is the RPS established under Senate Bills 1078 (Sher) and 107 (Simitian). Under the RPS, certain retail sellers of electricity were required to increase the amount of renewable energy each year by at least 1 percent in order to reach at least 20 percent by December 30, 2010. Executive Order S-14-08 was signed in November 2008, which expanded the state's Renewable Energy Standard to 33 percent renewable power by 2020. This standard was adopted by the legislature in 2011 (SB X1-2). Renewable sources of electricity include wind, small hydropower, solar, geothermal, biomass, and biogas.

The increase in renewable sources for electricity production will decrease indirect GHG emissions from development projects, because electricity production from renewable sources is generally considered carbon neutral.

Senate Bill 350

Senate Bill 350 (de Leon), was signed into law in September 2015. SB 350 establishes tiered increases to the RPS of 40 percent by 2024, 45 percent by 2027, and 50 percent by 2030. SB 350 also set a new goal to double the energy efficiency savings in electricity and natural gas through energy efficiency and conservation measures.

Senate Bill 100

On September 10, 2018, Governor Brown signed SB 100, which raises California's RPS requirements to 60 percent by 2030, with interim targets, and 100 percent by 2045. The bill also establishes a state policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of all retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all state agencies by December 31, 2045. Under the bill, the state cannot increase carbon emissions elsewhere in the western grid or allow resource shuffling to achieve the 100 percent carbon-free electricity target.

Executive Order B-55-18

Executive Order B-55-18, signed September 10, 2018, sets a goal "to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter." Executive Order B-55-18 directs CARB to work with relevant state agencies to ensure future Scoping Plans identify and recommend measures to achieve the carbon neutrality goal. The goal of carbon neutrality by 2045 is in addition to other statewide goals, meaning not only should emissions be reduced to 80 percent below 1990 levels by 2050, but that, by no later than 2045, the remaining emissions be offset by equivalent net removals of CO_2e from the atmosphere, including through sequestration in forests, soils, and other natural landscapes.

Executive Order B-16-2012

On March 23, 2012, the state identified that CARB, the California Energy Commission (CEC), the Public Utilities Commission, and other relevant agencies worked with the Plug-in Electric Vehicle Collaborative and the California Fuel Cell Partnership to establish benchmarks to accommodate zero-emissions vehicles in major metropolitan areas, including infrastructure to support them (e.g., electric vehicle charging stations). The executive order also directs the number of zero-emission vehicles in California's state vehicle fleet to increase through the normal course of fleet replacement so that at least 10 percent of fleet purchases of light-duty vehicles are zero-emission by 2015 and at least 25 percent by 2020. The executive order also establishes a target for the transportation sector of reducing GHG emissions from the transportation sector 80 percent below 1990 levels.

Executive Order N-79-20

On September 23, 2020 Governor Newsom signed Executive Order N-79-20 which identifies a goal that 100 percent of in-state sales of new passenger cars and trucks will be zero-emission by 2035. Additionally, this Executive Order identified fleet goals for trucks of 100 percent of drayage trucks be zero emissions by 2035

and 100 percent of medium- and heavy-duty vehicles in the State be zero-emission by 2045, for all operations where feasible. Additionally, the Executive Order identifies a goal for the State to transition to 100 percent zero-emission off-road vehicles and equipment by 2035 where feasible.

California Building Code: Building Energy Efficiency Standards

Energy conservation standards for new residential and non-residential buildings were adopted by the California Energy Resources Conservation and Development Commission (now the CEC) in June 1977 and most recently revised in 2019 (Title 24, Part 6, of the California Code of Regulations [CCR]). Title 24 requires the design of building shells and building components to conserve energy. The standards are updated periodically to allow for consideration and possible incorporation of new energy efficiency technologies and methods. The 2019 Building Energy Efficiency Standards, which were adopted on May 9, 2018, went into effect on January 1, 2020.

The 2019 standards move towards cutting energy use in new homes by more than 50 percent and will require installation of solar photovoltaic systems for single-family homes and multi-family buildings of 3 stories and less. Four key areas the 2019 standards will focus on include 1) smart residential photovoltaic systems; 2) updated thermal envelope standards (preventing heat transfer from the interior to exterior and vice versa); 3) residential and nonresidential ventilation requirements; 4) and nonresidential lighting requirements (CEC 2018a). Under the 2019 standards, nonresidential buildings and multifamily residential buildings of four stories or more will be 30 percent more energy efficient compared to the 2016 standards while single-family homes will be 7 percent more energy efficient (CEC 2018b). When accounting for the electricity generated by the solar photovoltaic system, single-family homes would use 53 percent less energy compared to homes built to the 2016 standards (CEC 2018b).

California Building Code: CALGreen

On July 17, 2008, the California Building Standards Commission adopted the nation's first green building standards. The California Green Building Standards Code (24 CCR, Part 11, known as "CALGreen") was adopted as part of the California Building Standards Code. CALGreen established planning and design standards for sustainable site development, energy efficiency (in excess of the California Energy Code requirements), water conservation, material conservation, and internal air contaminants.[11] The mandatory provisions of CALGreen became effective January 1, 2011. The CEC adopted the voluntary standards of the 2019 CALGreen on October 3, 2018. The 2019 CALGreen standards become effective January 1, 2020.

2006 Appliance Efficiency Regulations

The 2006 Appliance Efficiency Regulations (20 CCR §§ 1601–1608) were adopted by the CEC on October 11, 2006, and approved by the California Office of Administrative Law on December 14, 2006. The regulations include standards for both federally regulated appliances and non–federally regulated appliances. Though these regulations are now often viewed as "business as usual," they exceed the standards imposed by all other states, and they reduce GHG emissions by reducing energy demand.

[11] The green building standards became mandatory in the 2010 edition of the code.

Solid Waste Regulations

California's Integrated Waste Management Act of 1989 (AB 939; Public Resources Code §§ 40050 et seq.) set a requirement for cities and counties throughout the state to divert 50 percent of all solid waste from landfills by January 1, 2000, through source reduction, recycling, and composting. In 2008, the requirements were modified to reflect a per capita requirement rather than tonnage. To help achieve this, the act requires that each city and county prepare and submit a source reduction and recycling element. AB 939 also established the goal for all California counties to provide at least 15 years of ongoing landfill capacity.

AB 341 (Chapter 476, Statutes of 2011) increased the statewide goal for waste diversion to 75 percent by 2020 and requires recycling of waste from commercial and multifamily residential land uses. Section 5.408 of the CALGreen also requires that at least 65 percent of the nonhazardous construction and demolition waste from nonresidential construction operations be recycled and/or salvaged for reuse.

The California Solid Waste Reuse and Recycling Access Act (AB 1327; Public Resources Code §§ 42900 et seq.) requires areas to be set aside for collecting and loading recyclable materials in development projects. The act required the California Integrated Waste Management Board to develop a model ordinance for adoption by any local agency requiring adequate areas for collection and loading of recyclable materials as part of development projects. Local agencies are required to adopt the model or an ordinance of their own.

Section 5.408 of the 2019 CALGreen also requires that at least 65 percent of the nonhazardous construction and demolition waste from nonresidential construction operations be recycled and/or salvaged for reuse.

In October of 2014, Governor Brown signed AB 1826, requiring businesses to recycle their organic waste on and after April 1, 2016, depending on the amount of waste they generate per week. This law also requires that on and after January 1, 2016, local jurisdictions across the state implement an organic waste recycling program to divert organic waste generated by businesses, including multifamily residential dwellings that consist of five or more units. Organic waste means food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste.

Water Efficiency Regulations

The 20x2020 Water Conservation Plan was issued by the Department of Water Resources (DWR) in 2010 pursuant to Senate Bill 7, which was adopted during the 7th Extraordinary Session of 2009–2010 and therefore dubbed "SBX7-7." SBX7-7 mandated urban water conservation and authorized the DWR to prepare a plan implementing urban water conservation requirements (20x2020 Water Conservation Plan). In addition, it required agricultural water providers to prepare agricultural water management plans, measure water deliveries to customers, and implement other efficiency measures. SBX7-7 requires urban water providers to adopt a water conservation target of 20 percent reduction in urban per capita water use by 2020 compared to 2005 baseline use.

The Water Conservation in Landscaping Act of 2006 (AB 1881) requires local agencies to adopt the updated DWR model ordinance or equivalent. AB 1881 also requires the CEC to consult with the DWR to adopt, by regulation, performance standards and labeling requirements for landscape irrigation equipment, including

irrigation controllers, moisture sensors, emission devices, and valves to reduce the wasteful, uneconomic, inefficient, or unnecessary consumption of energy or water.

Thresholds of Significance

The CEQA Guidelines recommend that a lead agency consider the following when assessing the significance of impacts from GHG emissions on the environment:

1. The extent to which the project may increase (or reduce) GHG emissions as compared to the existing environmental setting;
2. Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project;
3. The extent to which the project complies with regulations or requirements adopted to implement an adopted statewide, regional, or local plan for the reduction or mitigation of GHG emissions.[12]

SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

To provide guidance to local lead agencies on determining significance for GHG emissions in their CEQA documents, South Coast AQMD has convened a GHG CEQA Significance Threshold Working Group (Working Group). Based on the last Working Group meeting (Meeting No. 15) held in September 2010, South Coast AQMD is proposing to adopt a tiered approach for evaluating GHG emissions for development projects where South Coast AQMD is not the lead agency (South Coast AQMD 2010):

- **Tier 1.** If a project is exempt from CEQA, project-level and cumulative GHG emissions are less than significant.
- **Tier 2.** If the project complies with a GHG emissions reduction plan or mitigation program that avoids or substantially reduces GHG emissions in the project's geographic area (i.e., city or county), project-level and cumulative GHG emissions are less than significant.
- **Tier 3.** If GHG emissions are less than the screening-level threshold, project-level and cumulative GHG emissions are less than significant.

  For projects that are not exempt or where no qualifying GHG reduction plans are directly applicable, South Coast AQMD requires an assessment of GHG emissions. South Coast AQMD is proposing a screening-level threshold of 3,000 $MTCO_2e$ annually for all land use types or the following land-use-specific thresholds: 1,400 $MTCO_2e$ for commercial projects, 3,500 $MTCO_2e$ for residential projects, or 3,000 $MTCO_2e$ for mixed-use projects. These bright-line thresholds are based on a review of the Governor's

[12] The Governor's Office of Planning and Research recommendations include a requirement that such a plan must be adopted through a public review process and include specific requirements that reduce or mitigate the project's incremental contribution of GHG emissions. If there is substantial evidence that the possible effects of a particular project are still cumulatively considerable, notwithstanding compliance with the adopted regulations or requirements, an EIR must be prepared for the project.

Office of Planning and Research database of CEQA projects. Based on their review of 711 CEQA projects, 90 percent of CEQA projects would exceed the bright-line thresholds identified above. Therefore, projects that do not exceed the bright-line threshold would have a nominal, and therefore, less than cumulatively considerable impact on GHG emissions:

- **Tier 4.** If emissions exceed the screening threshold, a more detailed review of the project's GHG emissions is warranted.

  The South Coast AQMD Working Group has identified an efficiency target for projects that exceed the screening threshold of 4.8 $MTCO_2e$ per year per service population ($MTCO_2e$/year/SP) for project-level analyses and 6.6 $MTCO_2e$/year/SP for plan level projects (e.g., program-level projects such as general plans) for the year 2020.[13] The per capita efficiency targets are based on the AB 32 GHG reduction target and 2020 GHG emissions inventory prepared for CARB's 2008 Scoping Plan.

For purposes of this analysis, because the proposed project has an anticipated opening year post-2020 (year 2021), the bright-line screening-level criterion of 3,000 $MTCO_2e$/yr is used as the significance threshold for this project. Therefore, if the project operation-phase emissions exceed the 3,000 $MTCO_2e$/yr threshold, GHG emissions would be considered potentially significant in the absence of mitigation measures.

[13] It should be noted that the Working Group also considered efficiency targets for 2035 for the first time in this Working Group meeting.

GHG Emissions Inventory

Source: CalEEMod, Version 2016.3.2.25

$MTCO_2e$=metric tons of carbon dioxide equivalent.

Construction

	$MTCO_2e$
2022	153
2023	226
2024	118
Total Construction	**497**
30-Year Amortization[1]	**17**

Operation	$MTCO_2e$	Percent of Emissions
Area	4	0.2%
Energy	648	29%
Mobile	1,319	60%
Solid Waste	163	7%
Water	57	3%
30-Yr Amortized Construction Emissions[1]	17	1%
Total	**2,207**	**100%**
South Coast AQMD Working Group Threshold	3,000	
Exceed Threshold?	**No**	

Notes

1 Total construction emissions are amortized over 30 years per South Coast AQMD Working Group methodology; SCAQMD. 2009, November 19. Greenhouse Gases (GHG) CEQA Significance Thresholds Working Group Meeting 14. http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-14/ghg-meeting-14-main-presentation.pdf?sfvrsn=2.

Assumptions Worksheet

CalEEMod Inputs - Starlite Residential Development Project, Construction

Name:	Starlite Residential Development Project
Project Number:	KBH-02
Project Location:	2540 Rosemead Blvd in South El Monte
County/Air Basin:	Los Angeles
Climate Zone:	9
Land Use Setting:	Urban
Operational Year:	2023
Utility Company:	Southern California Edison
Air Basin:	South Coast Air Basin
Air District:	SCAQMD
SRA:	11- South San Gabriel Valley

Proiect Site Acreage	13.45
Disturbed Site Acreage	12.40

Project Components	SQFT	Tons	Debris (Tons)	
Demolition				
Building Demolition	7,400	250	54	
Asphalt Demolition*		6,525	6,525	
New Construction	***Number of Units***	***SQFT***	***ACRES***	**Number of Floors**
Single Family Homes	169	346,004	5.28	3
Townhomes	38	62,100	0.48	3
Total Residential Area		**408,104**	**5.75**	
Pool		9,000	0.21	
Parking Lot		4,200	0.10	
Other Asphalt Surfaces		136,247	3.13	
Total Hardscape		55,340	1.27	
Total Landscaping:		84,740	1.95	

*remainder of land use acreage assigned to single family home acreage (2.63 acres).

CalEEMod Land Use Inputs

Land Use Type	Land Use Subtype	Unit Amount	Size Metric	Lot Acreage*	Land Use Square Feet
Residential	Single Family Homes	169	DU	5.28	346,004
Residential	Condo/Townhomes	38	DU	0.48	62,100
Recreational	Pool	9.000	1000 sqft	0.21	9,000
Parking	Parking Lot	4.200	1000 sqft	0.10	4,200
Parking	Other Asphalt Surfaces	136.247	1000 sqft	3.13	136,247
Parking	Other Non-asphalt Surfaces	140.080	1000 sqft	3.22	140,080
				12.40	

assumes that building acreage is covered under non-asphalt surfaces.

Demolition

Component	Amount to be Demolished (Tons)	Haul Truck Capacity (Tons)[1]	Haul Distance (miles)	Total Trip Ends	Duration (days)	Trip Ends/Day
Total Building Demo	196	18	6	22	3	7
Total	196			22		

[1] *Demolition debris would be taken to the Puente Hills MRF (provided by the Applicant). Reduced truck haul capacity from CalEEMod default of 20 tons to 18 tons.*

Soil Haul[1]

Construction Activities	Volume (CY)	Haul Truck Capacity (cy)	Haul Distance (miles)	Total Trip Ends	Total Days	Trip Ends/Day
Rough Grading (Import)	4,852	16	5	607	10	61

[1] *Soil haul would be taken to the Puente Hills MRF (provided by the Applicant).*

Architectural Coating

Percentage of Proposed Buildings' Interior Painted:	100%	
Percentage of Proposed Buildings' Exterior Painted:	100%	
Rule 1113		
Interior Paint VOC content:	50	grams per liter
Exterior Paint VOC content:	50	grams per liter

Residential Structures	Land Use Square Feet	CalEEMod Factor[2]	Total Paintable Surface Area	Paintable Interior Area[1]	Paintable Exterior Area[1]
Single Family Homes	346,004	2.7	934,211	700,658	233,553
Townhomes	62,100	2.7	167,670	125,753	41,918
Pool	9,000	2.7	24,300	18,225	6,075
			1,126,181	844,636	281,545
Parking Lot	4,200	6%	252		252
			252		252

[1]CalEEMod methodology calculates the paintable interior and exterior areas by multiplying the total paintable surface area by 75 and 25 percent, respectively.

[2] The program assumes the total surface for painting equals 2.7 times the floor square footage for residential and 2 times that for nonresidential square footage defined by the user. Architectural coatings for the parking lot is based on CalEEMod methodology applied to a surface parking lot (i.e., striping), in which 6% of surface area is painted.

Construction Mitigation

SCAQMD Rule 403

Replace Ground Cover	PM10:	5	% Reduction
Replace Ground Cover	PM2.5:	5	% Reduction
Water Exposed Area	Frequency:	2	per day
	PM10:	55	% Reduction
	PM25:	55	% Reduction
Unpaved Roads	Vehicle Speed:	15	mph
SCAQMD Rule 1186	Clean Paved Road	9	% PM Reduction

Southern California Edison Carbon Intensity Factors

CO2:[1,2]	531.44	pounds per megawatt hour
CH4:[3]	0.029	pound per megawatt hour
N2O:[3]	0.00617	pound per megawatt hour

2 Unless otherwise noted, per CalEEMod methodology, the calculated CalEEMod emission rates are derived from the emission rates obtained from EMFAC2017 Version 1.0.3.

3 Because EMFAC2017 provides vehicle trips data for MHDT and HHDT diesel trucks, the formula provided in Appendix A of the CalEEMod User's Guide in calculating the NO_X STREX emission rates are utilized.

Source: EMFAC2017 (v1.0.3) Emission Rates
Region Type: Sub-Area
Region: Los Angeles (SC)
Calendar Year: 2024
Season: Summer
Vehicle Classification: EMFAC2007 Categories
Units: miles/day for VMT, trips/day for Trips, g/mile for RUNEX, PMBW and PMTW, g/trip for STREX, HOTSOAK and RUNLOSS, g/vehicle/day for IDLEX, RESTLOSS and DIURN

CalEEMod Construction Model

Starlite Residential Development Project Construction

Los Angeles-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Single Family Housing	169.00	Dwelling Unit	5.28	346,004.00	483
Condo/Townhouse	38.00	Dwelling Unit	0.48	62,100.00	109
Recreational Swimming Pool	9.00	1000sqft	0.21	9,000.00	0
Parking Lot	4.20	1000sqft	0.10	4,200.00	0
Other Asphalt Surfaces	136.25	1000sqft	3.13	136,247.00	0
Other Non-Asphalt Surfaces	140.08	1000sqft	3.22	140,080.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info from applicant, remainder of land use acreage assigned to single family home acreage (2.63 acres)

Construction Phase - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment -

Off-road Equipment - no additional equipment required for soil haul

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Grading -

Demolition -

Trips and VMT - based on info from applicant

Architectural Coating - assumes pool and associated structures would be treated as residential. Assumes only parking area would be coated.

Construction Off-road Equipment Mitigation - SCAQMD Rule 403 and Rule 1186

Starlite Residential Development Project Construction

Los Angeles-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Single Family Housing	169.00	Dwelling Unit	5.28	346,004.00	483
Condo/Townhouse	38.00	Dwelling Unit	0.48	62,100.00	109
Recreational Swimming Pool	9.00	1000sqft	0.21	9,000.00	0
Parking Lot	4.20	1000sqft	0.10	4,200.00	0
Other Asphalt Surfaces	136.25	1000sqft	3.13	136,247.00	0
Other Non-Asphalt Surfaces	140.08	1000sqft	3.22	140,080.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info from applicant, remainder of land use acreage assigned to single family home acreage (2.63 acres)

Construction Phase - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment -

Off-road Equipment - no additional equipment required for soil haul

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Grading -

Demolition -

Trips and VMT - based on info from applicant

Architectural Coating - assumes pool and associated structures would be treated as residential. Assumes only parking area would be coated.

Construction Off-road Equipment Mitigation - SCAQMD Rule 403 and Rule 1186

Starlite Residential Development Project Construction

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Single Family Housing	169.00	Dwelling Unit	5.28	346,004.00	483
Condo/Townhouse	38.00	Dwelling Unit	0.48	62,100.00	109
Recreational Swimming Pool	9.00	1000sqft	0.21	9,000.00	0
Parking Lot	4.20	1000sqft	0.10	4,200.00	0
Other Asphalt Surfaces	136.25	1000sqft	3.13	136,247.00	0
Other Non-Asphalt Surfaces	140.08	1000sqft	3.22	140,080.00	0

1.2 Other Project Characteristics

Urbanization Urban **Wind Speed (m/s)** 2.2 **Precipitation Freq (Days)** 33

Climate Zone 9 **Operational Year** 2024

Utility Company Southern California Edison

CO2 Intensity (lb/MWhr) 531.44 **CH4 Intensity (lb/MWhr)** 0.029 **N2O Intensity (lb/MWhr)** 0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info from applicant, remainder of land use acreage assigned to single family home acreage (2.63 acres)

Construction Phase - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment -

Off-road Equipment - no additional equipment required for soil haul

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Grading -

Demolition -

Trips and VMT - based on info from applicant

Architectural Coating - assumes pool and associated structures would be treated as residential. Assumes only parking area would be coated.

Construction Off-road Equipment Mitigation - SCAQMD Rule 403 and Rule 1186

Single Family Housing	169.00	Dwelling Unit	5.28	346,004.00	483

1.2 Other Project Characteristics

Urbanization Urban

Wind Speed (m/s) 2.2

Precipitation Freq (Days) 33

Climate Zone 9

Operational Year 2024

Utility Company Southern California Edison

CO2 Intensity (lb/MWhr) 531.44

CH4 Intensity (lb/MWhr) 0.029

N2O Intensity (lb/MWhr) 0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info from applicant, remainder of land use acreage assigned to single family home acreage (2.63 acres)

Construction Phase - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Trips and VMT - based on info from applicant

Demolition -

Grading -

Architectural Coating - assumes pool and associated structures would be treated as residential. Assumes only parking area would be coated. MM: 0 VOC paints for interior

Construction Off-road Equipment Mitigation - SCAQMD Rule 403 and Rule 1186

CalEEMod Operations Model

Starlite Residential Development Project Operations

Los Angeles-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Other Asphalt Surfaces	136.25	1000sqft	3.13	136,247.00	0
Other Non-Asphalt Surfaces	140.08	1000sqft	3.22	140,080.00	0
Parking Lot	4.20	1000sqft	0.10	4,200.00	0
Recreational Swimming Pool	9.00	1000sqft	0.21	9,000.00	0
Condo/Townhouse	38.00	Dwelling Unit	0.48	62,100.00	109
Single Family Housing	169.00	Dwelling Unit	5.28	346,004.00	483

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info provided by applicant, remainder of land use acreage assigned to single family home acreage (2.63 acres).

Construction Phase -

Vehicle Trips - based on trip generation provided by Iteris

Vehicle Emission Factors - see emfac emissions adjustment

Woodstoves - no fireplaces

Area Coating - assuming pool and associated buildings will be coated as residential. Assumes parking area to be striped only

Energy Use - based on adjustment from NORESCO study. See assumptions file for adjustmet calculations

Water And Wastewater - see USS section of MND. Assigns all water use to single family housing. Assumes 100% aerobic treatment.

Solid Waste - based on solid waste from USS section of MND.

Water Mitigation -

Fleet Mix - see fleet mix adjustment in assumptions file

Starlite Residential Development Project Operations

Los Angeles-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Other Asphalt Surfaces	136.25	1000sqft	3.13	136,247.00	0
Other Non-Asphalt Surfaces	140.08	1000sqft	3.22	140,080.00	0
Parking Lot	4.20	1000sqft	0.10	4,200.00	0
Recreational Swimming Pool	9.00	1000sqft	0.21	9,000.00	0
Condo/Townhouse	38.00	Dwelling Unit	0.48	62,100.00	109
Single Family Housing	169.00	Dwelling Unit	5.28	346,004.00	483

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info provided by applicant, remainder of land use acreage assigned to single family home acreage (2.63 acres).

Construction Phase -

Vehicle Trips - based on trip generation provided by Iteris

Vehicle Emission Factors - see emfac emissions adjustment

Woodstoves - no fireplaces

Area Coating - assuming pool and associated buildings will be coated as residential. Assumes parking area to be striped only

Energy Use - based on adjustment from NORESCO study. See assumptions file for adjustmet calculations

Water And Wastewater - see USS section of MND. Assigns all water use to single family housing. Assumes 100% aerobic treatment.

Solid Waste - based on solid waste from USS section of MND.

Water Mitigation -

Fleet Mix - see fleet mix adjustment in assumptions file

Starlite Residential Development Project Operations

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Other Asphalt Surfaces	136.25	1000sqft	3.13	136,247.00	0
Other Non-Asphalt Surfaces	140.08	1000sqft	3.22	140,080.00	0
Parking Lot	4.20	1000sqft	0.10	4,200.00	0
Recreational Swimming Pool	9.00	1000sqft	0.21	9,000.00	0
Condo/Townhouse	38.00	Dwelling Unit	0.48	62,100.00	109
Single Family Housing	169.00	Dwelling Unit	5.28	346,004.00	483

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info provided by applicant, remainder of land use acreage assigned to single family home acreage (2.63 acres).

Construction Phase -

Vehicle Trips - based on trip generation provided by Iteris

Vehicle Emission Factors - see emfac emissions adjustment

Woodstoves - no fireplaces

Area Coating - assuming pool and associated buildings will be coated as residential. Assumes parking area to be striped only

Energy Use - based on adjustment from NORESCO study. See assumptions file for adjustmet calculations

Water And Wastewater - see USS section of MND. Assigns all water use to single family housing. Assumes 100% aerobic treatment.

Solid Waste - based on solid waste from USS section of MND.

Water Mitigation -

Fleet Mix - see fleet mix adjustment in assumptions file

LIST OF FIGURES

LIST OF TABLES

SUMMARY OF FINDINGS

This study was conducted to determine the potential impacts to cultural and paleontological resources during the Starlite Residential Project (Project) in the City of South El Monte (City; Figure 1), Los Angeles County, California. The City of South El Monte is the lead agency for the Project under the California Environmental Quality Act (CEQA).

The Project Area is located on 13.3 acres between Rosemead Boulevard and Chico Avenue in the City of South El Monte, Los Angeles County, California. Specifically, it is located in Township 1 South, Range 11 West, Section 29 on the United States Geological Survey (USGS) 7.5-minute El Monte topographic quadrangle map, San Bernardino Base and Meridian. Maximum planned depths for grading and utilities trenching are 7 and 10 feet respectively.

PALEONTOLOGICAL RESOURCES

The Project Area is mapped entirely as late Pleistocene to Holocene young alluvial fan deposits, which were deposited from 129,000 years ago through into historic times. The paleontological record search revealed no fossil localities from within the Project Area or within a 5-mile radius. Fossil localities are known from terrestrial deposits near to the Project. Extinct late Pleistocene animal fossils of mammoth, horse, camel, Harlan's ground sloth, Pacific mastodon, sabre-toothed cat, California turkey, and bison have been recovered from within 12 miles of the study area.

The paleontological records search revealed that all of the fossils previously recovered within a 12-mile radius were a minimum of 5 feet deep in deposits mapped as Pleistocene at the surface. Sediments with a Holocene component such as those of the study area produced fossils starting at 24 feet deep near to the Project Area. As such the Project sediments less than 20 feet below the modern surface are assigned a low potential for fossils (PFYC 2) and deeper deposits are assigned a moderate potential for fossils (PFYC 3) due to similar deposits producing fossils at that depth near to the study area.

Based on fossils found in similar sediments nearby, no paleontological monitoring is currently recommended for the mass excavations. Drilling or pile driving activities, regardless of depth, have a low potential to produce fossils meeting significance criteria because any fossils brought up by the auger during drilling will not have information about formation, depth or context. If unanticipated fossil discoveries are made, all work must halt within 50 feet until a qualified paleontologist can evaluate the find. Work may resume immediately outside of the 50-foot radius.

CULTURAL RESOURCES

The Starlite Drive-In theater sign (constructed in 1950) is recommended eligible for individual listing on the California Register of Historic Resources (CRHR) under Criteria 1 and 3. The sign is important for its historical association with drive-in movie theaters and car culture in the United States. It is also an excellent example of a Streamline Modern/Googie style theater sign

and work of an important architect, J. (Jonas) Arthur Drielsma. The sign is a key element of the Starlite Drive-In theater; the theater as a whole has lost integrity due to demolition of important features, but the sign remains significant in its own right as a freestanding historic resource and retains much of its integrity.

It is Cogstone's understanding that there is an interest in restoring the Starlite Drive-In theater's sign to its original condition with a possibility for incorporation into future development of the Project Area. The sign may be moved a short distance within the site so long as it continues to face Rosemead Boulevard, therefore, its relationship to the street will remain the same. Upon review of potential building plans for the Project Area, the majority of the new buildings will be set back away from the sign and located within the drive-in's parking lot. With Cogstone's recommendation of historical significance and eligibility for listing, we strongly encourage the restoration or rehabilitation of this resource following the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, & Reconstructing Historic Building*.

2559 Chico Avenue (Commercial Building) was demolished just prior to Cogstone's field visit and, therefore, the building could not be documented or evaluated for eligibility for listing in either the California Register of Historical Resources (CRHR).

2559 Chico Avenue (Single Family Residence); due to a lack of significance the single family residence at 2559 Chico Avenue is recommended not eligible for listing on the CRHR.

Cogstone requested a search of the California Historic Resources Information System (CHRIS) from the South Central Coastal Information Center (SCCIC) on February 12, 2021 that included the entire proposed Project Area as well as a half-mile radius. The SCCIC completed the request on March 17, 2021. Results of the record search indicate that seventeen previous studies have been completed within a half-mile of the proposed Project Area. There are no previous studies within the Project Area. The records search also determined there are no previously recorded resources located within the Project boundaries. One historic resource, an overhead electrical transmission line, is located within a half-mile of the Project Area.

A Sacred Lands File (SLF) search requested from the Native American Heritage Commission (NAHC) on February 12, 2021 indicated that there are sacred lands or resources known within the Project Area (Appendix C). The NAHC recommended that eight representatives from local Native American tribal organizations be contacted for further information regarding the Project vicinity. The City of South El Monte is conducting tribal consultations to meet the requirements of Assembly Bill 52 and Senate Bill 18.

Cogstone archaeologist and cross-trained paleontologist Sandy Duarte surveyed the Project Area on March 2, 2021. Due to the heavily developed Project Area, the pedestrian survey consisted of 10-meter wide transects. No archaeological or paleontological resources were observed within the Project Area during the survey.

Based on the results of the pedestrian survey and cultural records search, the Project Area has low sensitivity for prehistoric cultural resources. Analysis of these data sources and historical

USDA aerial photographs and USGS topographic quadrangle maps indicate that the Project Area also has low sensitivity for significant buried historical archaeological features such as foundations or trash pits. No further archaeological work is recommended but any information provided in support of the positive SLF search result during tribal consultation must be considered during the approval process.

In the event of an unanticipated discovery, all work must be suspended within 50 feet of the find until it is evaluated by a qualified archaeologist. In the unlikely event that human remains are encountered during Project development, all work must cease near the find immediately.

In accordance with California Health and Safety Code Section 7050.5, the County Coroner must be notified if potentially human bone is discovered. The Coroner will then determine within two working days of being notified if the remains are subject to his or her authority. If the Coroner recognizes the remains to be Native American, he or she shall contact the Native American Heritage Commission (NAHC) by phone within 24 hours, in accordance with Public Resources Code Section 5097.98. The NAHC will then designate a Most Likely Descendant (MLD) with respect to the human remains. The MLD then has the opportunity to recommend to the property owner or the person responsible for the excavation work means for treating or disposing, with appropriate dignity, the human remains and associated grave goods. Work may not resume in the vicinity of the find until all requirements of the health and safety code have been met.

INTRODUCTION

PURPOSE OF STUDY

This study was conducted to determine the potential impacts to cultural and paleontological resources during the Starlite Residential Project (Project) in the City of South El Monte (City; Figure 1), Los Angeles County, California. The City of South El Monte is the lead agency for the Project under the California Environmental Quality Act (CEQA).

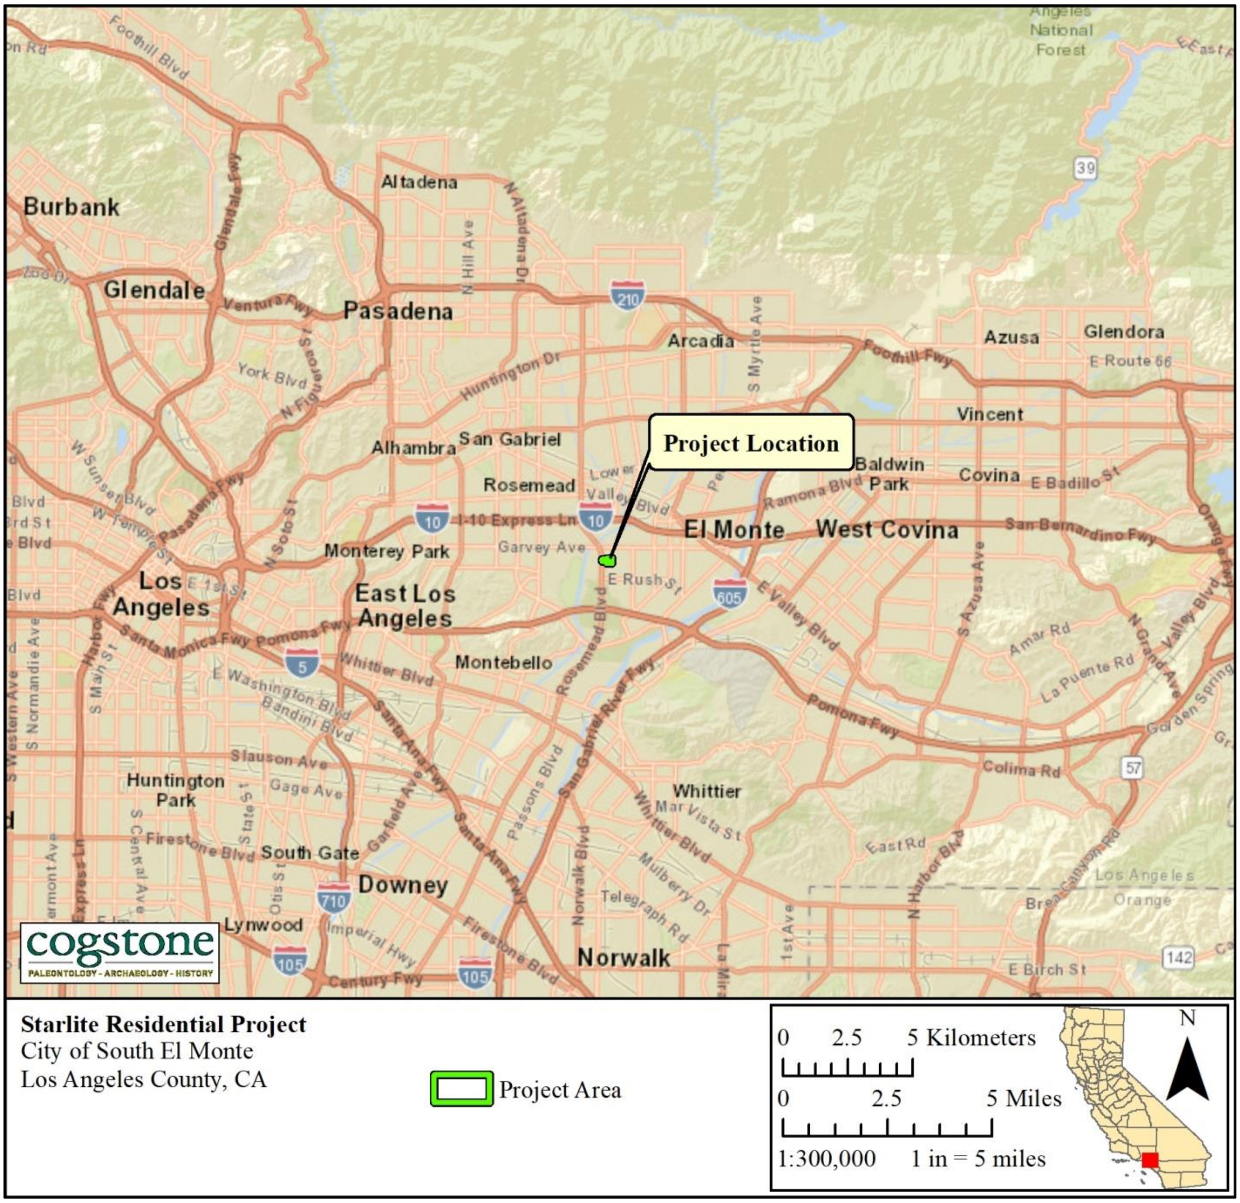

Figure 1. Project Vicinity Map

PROJECT LOCATION AND DESCRIPTION

The Project Area is located on 13.3 acres between Rosemead Boulevard and Chico Avenue in the City of South El Monte, Los Angeles County, California. Specifically, it is located in Township 1 South, Range 11 West, Section 29 on the United States Geological Survey (USGS) 7.5-minute El Monte topographic quadrangle map, San Bernardino Base and Meridian (Figures 2 and 3).

The Project involves the construction of 207 residential units that include 38 cottages and 169 detached units. The Project Area was formerly used as a drive-in theater and is currently used for a swap meet. The Project Area is almost entirely hardscaped. Maximum planned depths for grading and utilities trenching are 7 and 10 feet respectively.

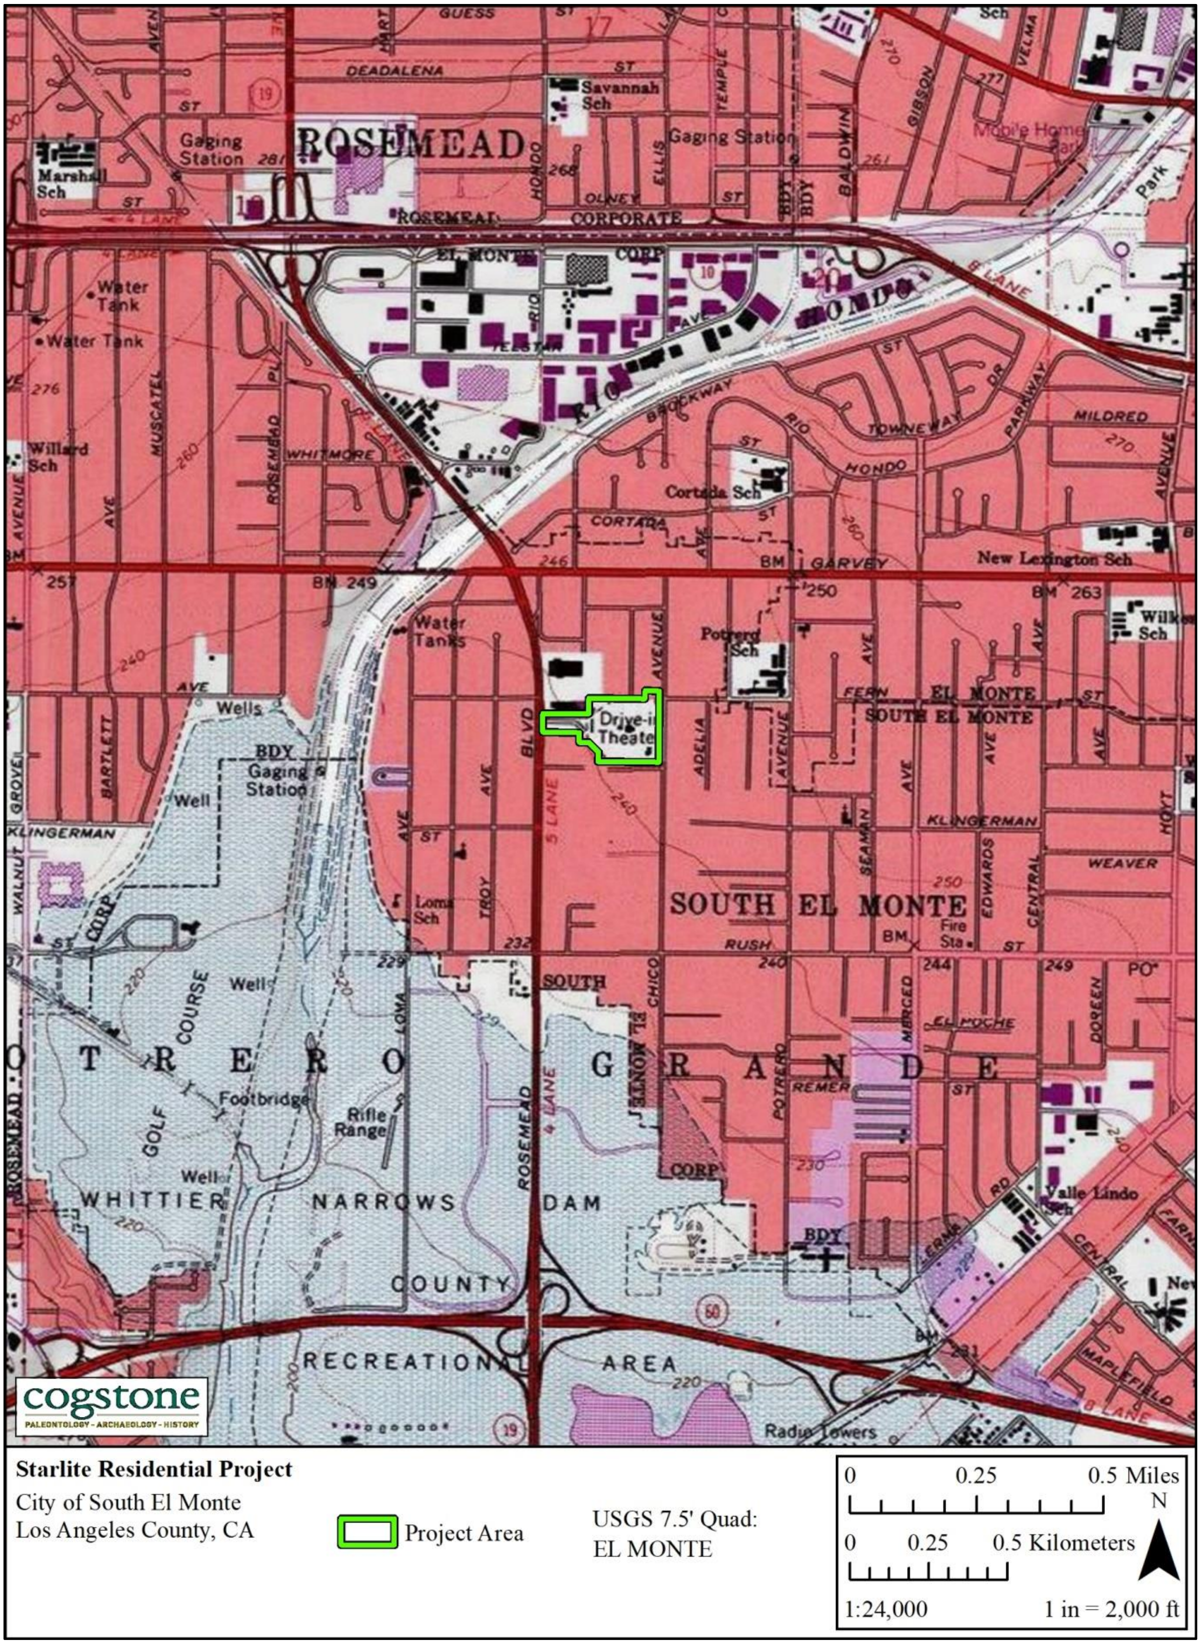

Figure 2. Project Location Map

Figure 3. Project Aerial Map

PROJECT PERSONNEL

Cogstone Resource Management, Inc. (Cogstone) carried out this assessment and drafted this report. Brief resumes of key project personnel are in Appendix A.

- Molly Valasik provided QAQC for the Project. Ms. Valasik has an M.A. in Anthropology from Kent State University in Ohio and over 12 years of experience in southern California archaeology.

- Dr. John Gust, RPA, served as the Task Manager and Principal Investigator for Archaeology for the Project, and reviewed this report. Dr. Gust has a Ph.D in Anthropology from the University of California (UC), Riverside, and over 9 years of experience in archaeology.

- Eric Scott provided QA/QC of the paleontology and geology sections of this report. Mr. Scott has an M.A. in Anthropology, with an emphasis in biological paleoanthropology, from the University of California, Los Angeles (UCLA), and more than 37 years of experience in California paleontology.

- Kim Scott served as the Principal Investigator for Paleontology for the Project and reviewed the geological and paleontological portions of this report. Ms. Scott has an M.S. in Biology with paleontology emphasis from California State University (CSU), San Bernardino, a B.S. in Geology with paleontology emphasis from UCLA, and over 25 years of experience in California paleontology and geology.

- Shannon Lopez conducted the built environment survey and the evaluation of historic resources, and co-authored this report. Ms. Lopez holds an M.A. in History from CSU Fullerton and has three years of experience in history and architectural history.

- Sandy Duarte conducted the field survey, and co-authored this report. Mrs. Duarte holds a B.A. in Anthropology from UC Santa Barbara, and has more than 18 years of experience in California archaeology.

- Kelly Vreeland authored the geological and paleontological portions of this report. Ms. Vreeland has an M.S. and a B.S. in Geology, with an emphasis in paleontology, from CSU Fullerton, as well as 10 years of experience in California paleontology and geology.

- Logan Freeberg prepared the Geographic Information System (GIS) maps throughout this report. Mr. Freeberg has a B.A. in Anthropology from the UC Santa Barbara and a GIS

certification from CSU Fullerton and over 18 years of experience in California archaeology.

REGULATORY ENVIRONMENT

STATE LAWS AND REGULATIONS

CALIFORNIA ENVIRONMENTAL QUALITY ACT

CEQA states that: It is the policy of the state that public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects, and that the procedures required are intended to assist public agencies in systematically identifying both the significant effects of proposed project and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects.

CEQA declares that it is state policy to: "take all action necessary to provide the people of this state with...historic environmental qualities." It further states that public or private projects financed or approved by the state are subject to environmental review by the state. All such projects, unless entitled to an exemption, may proceed only after this requirement has been satisfied. CEQA requires detailed studies that analyze the environmental effects of a proposed project. In the event that a project is determined to have a potential significant environmental effect, the act requires that alternative plans and mitigation measures be considered.

TRIBAL CULTURAL RESOURCES

As of 2015, CEQA established that "[a] project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment" (Public Resources Code, § 21084.2). In order to be considered a "tribal cultural resource," a resource must be either:

(1) listed, or determined to be eligible for listing, on the national, state, or local register of historic resources, or
(2) a resource that the lead agency chooses, in its discretion, to treat as a tribal cultural resource.

To help determine whether a project may have such an effect, the lead agency must consult with any California Native American tribe that requests consultation and is traditionally and culturally affiliated with the geographic area of a proposed project. If a lead agency determines that a project may cause a substantial adverse change to tribal cultural resources, the lead agency must consider measures to mitigate that impact. Public Resources Code §20184.3 (b)(2) provides

examples of mitigation measures that lead agencies may consider to avoid or minimize impacts to tribal cultural resources.

PUBLIC RESOURCES CODE

Section 5097.5: No person shall knowingly and willfully excavate upon, or remove, destroy, injure or deface any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, or any other archaeological, paleontological or historical feature, situated on public lands (lands under state, county, city, district or public authority jurisdiction, or the jurisdiction of a public corporation), except with the express permission of the public agency having jurisdiction over such lands. Violation of this section is a misdemeanor. As used in this section, "public lands" means lands owned by, or under the jurisdiction of, the state, or any city, county, district, authority, or public corporation, or any agency thereof.

CALIFORNIA REGISTER OF HISTORICAL RESOURCES

The California Register of Historical Resources (CRHR) is a listing of all properties considered to be significant historical resources in the state. The California Register includes all properties listed or determined eligible for listing on the National Register, including properties evaluated under Section 106, and State Historical Landmarks No. 770 and above. The California Register statute specifically provides that historical resources listed, determined eligible for listing on the California Register by the State Historical Resources Commission, or resources that meet the California Register criteria are resources which must be given consideration under CEQA (see above). Other resources, such as resources listed on local registers of historic resources or in local surveys, may be listed if they are determined by the State Historic Resources Commission to be significant in accordance with criteria and procedures to be adopted by the Commission and are nominated; their listing in the California Register is not automatic.

The types of resources include building, site, structure, object, and historic district. Eligibility for the CRHR is determined based upon the presence of integrity of location, design, setting, materials, workmanship, feeling, and association in a resource. In addition, the resource must meet one of the following four criteria to meet significance at the local, state or national level. The criteria area as follows:

1) Associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States;
2) Associated with the lives of persons important to local, California, or national history;
3) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master or possesses high artistic values; or
4) Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

In addition to having significance, resources must have integrity for the period of significance. The period of significance is the date or span of time within which significant events transpired, or significant individuals made their important contributions. Integrity is the authenticity of a historical resource's physical identity as evidenced by the survival of characteristics or historic fabric that existed during the resource's period of significance.

Alterations to a resource or changes in its use over time may have historical, cultural, or architectural significance. Simply, resources must retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. A resource that has lost its historic character or appearance may still have sufficient integrity for the California Register, if, under Criterion 4, it maintains the potential to yield significant scientific or historical information or specific data.

NATIVE AMERICAN HUMAN REMAINS

Sites that may contain human remains important to Native Americans must be identified and treated in a sensitive manner, consistent with state law (i.e., Health and Safety Code §7050.5 and Public Resources Code §5097.98), as reviewed below:

In the event that human remains are encountered during project development and in accordance with the Health and Safety Code Section 7050.5, the County Coroner must be notified if potentially human bone is discovered. The Coroner will then determine within two working days of being notified if the remains are subject to his or her authority. If the Coroner recognizes the remains to be Native American, he or she shall contact the Native American Heritage Commission (NAHC) by phone within 24 hours, in accordance with Public Resources Code Section 5097.98. The NAHC will then designate a Most Likely Descendant (MLD) with respect to the human remains. The MLD then has the opportunity to recommend to the property owner or the person responsible for the excavation work means for treating or disposing, with appropriate dignity, the human remains and associated grave goods.

CALIFORNIA ADMINISTRATIVE CODE, TITLE 14, SECTION 4307

This section states that "No person shall remove, injure, deface or destroy any object of paleontological, archeological or historical interest or value."

LOS ANGELES COUNTY LAWS AND REGULATIONS

Cultural and Paleontological resources are addressed under the Conservation and Natural Resource Element of the Los Angeles County 2035 General Plan (2012), which states the following:

- Goal C/NR 14: Protected historic, cultural, and paleontological resources.

- Policy C/NR 14.1: Mitigate all impacts from new development on or adjacent to historic, cultural, and paleontological resources to the greatest extent feasible.
- Policy C/NR 14.2: Support an inter-jurisdictional collaborative system that protects and enhances the County's historic, cultural, and paleontological resources.
- Policy C/NR 14.5: Promote public awareness of the County's historic, cultural, and paleontological resources.
- Policy C/NR 14.6: Ensure proper notification and recovery processes are carried out for development on or near historic, cultural, and paleontological resources.

DEFINITION OF SIGNIFICANCE FOR PALEONTOLOGICAL RESOURCES

Only qualified, trained paleontologists with specific expertise in the type of fossils being evaluated can determine the scientific significance of paleontological resources. Fossils are considered to be significant if one or more of the following criteria apply:

1. The fossils provide information on the evolutionary relationships and developmental trends among organisms, living or extinct;
2. The fossils provide data useful in determining the age(s) of the rock unit or sedimentary stratum, including data important in determining the depositional history of the region and the timing of geologic events therein;
3. The fossils provide data regarding the development of biological communities or interaction between paleobotanical and paleozoological biotas;
4. The fossils demonstrate unusual or spectacular circumstances in the history of life;
5. The fossils are in short supply and/or in danger of being depleted or destroyed by the elements, vandalism, or commercial exploitation, and are not found in other geographic locations.

As so defined, significant paleontological resources are determined to be fossils or assemblages of fossils that are unique, unusual, rare, uncommon, or diagnostically important. Significant fossils can include remains of large to very small aquatic and terrestrial vertebrates or remains of plants and animals previously not represented in certain portions of the stratigraphy. Assemblages of fossils that might aid stratigraphic correlation, particularly those offering data for the interpretation of tectonic events, geomorphologic evolution, and paleoclimatology are also critically important (Scott and Springer 2003; Scott et al. 2004).

BACKGROUND

GEOLOGICAL SETTING

The Project lies within the Los Angeles Basin, a sedimentary basin which includes the coastal plains of Los Angeles and Orange counties and extends out to Catalina Island, California. This region is bounded by the Santa Ana Mountains to the east, the Santa Monica Mountains to the north, and the San Joaquin Hills to the south. The marine Los Angeles Basin began to develop in the early Miocene Epoch, about 23 million years ago. Through time the basin transitioned to terrestrial deposition by the middle Pleistocene, about 1 million years ago.

The area is part of the coastal section of the northernmost Peninsular Range Geomorphic Province and is characterized by elongated northwest-trending mountain ridges separated by sediment-floored valleys. Subparallel faults branching off from the San Andreas Fault to the east create the local mountains and hills. The Peninsular Ranges Geomorphic Province is located in the southwestern corner of California and is bounded by the Transverse Ranges Geomorphic Province to the north and the Colorado Desert Geomorphic Province to the east (Wagner 2002).

STRATIGRAPHY

Geologic mapping indicates that the Project is underlain by late Pleistocene to Holocene young alluvial fans deposits (unit 3), which were deposited between 129,000 years ago and historic times (Campbell et al. 2014). Although not mapped, the Project Area contains various amounts of artificial fill that was placed during previous development, and is noted in the geotechnical investigation conducted by RMA GeoScience (2020).

ARTIFICIAL FILL

Artificial fill (modern) is frequently not depicted on geologic maps due to its ubiquitous nature; it is usually only shown when its extent is considerable. Although such fill is typically less than a few feet thick, it can be substantially thicker in the areas of overpasses, freeways, and other large earthworks. Any fossils that may be encountered therein are not scientifically significant. Based upon the geotechnical investigation, the Project Area contains 2.5–5 feet of artificial fill.

YOUNG ALLUVIAL FAN DEPOSITS, UNIT 3

Alluvial fan deposits are laid down along the outer slopes of our valleys from local mountains via the mouths of canyons, mainly from flooding streams and debris flows. Sediments consist primarily of unconsolidated silt, sand, and gravel deposits (Campbell et al. 2014). Clasts coarsen upstream with boulders up to several meters across being deposited near the mountains during flash floods.

PALEONTOLOGICAL SETTING

During the Pleistocene Epoch (~2.6 million – ~11, 000 years ago), the ocean continued to recede (and/or the land to rise), coastal California changed from shallow marine to terrestrial. The developing terrestrial landscape had a climate that was moister than the present, with free flowing streams and relatively abundant standing water. Numerous water sources provided various opportunities for fossilization, providing a fairly complete view of Pleistocene life. An increase in water also allowed vegetation to flourish, which would have resembled the flora found today near Monterey, California. Pleistocene megafauna present in the region included ground sloth, mammoth, mastodon, horse, camel, bison, pronghorn, peccary, wolf, and saber-toothed cat. Small animals were abundant and included most of the species found in the same areas today.

ENVIRONMENTAL SETTING

Located in Los Angeles County, the Project Area is a half-mile east of the Rio Hondo River and 2.5 miles west of the San Gabriel River. The Pacific Ocean is about 24.5 miles to the west of the Project. Today's Mediterranean-like climate in southern California is characterized by warm, dry summers and cool, moist winters, with rainfall predominantly falling between November and May. Mild breezes reach the area from the Pacific Ocean.

Prior to development, the native vegetation of the Project Area consisted of California coastal sage scrub mixed with the riparian species of the San Gabriel River. Characteristic species of the California coastal sage scrub include California sagebrush (*Artemisia californica*), coyote brush (*Baccharis pilularis* var. *consanguinea*), California buckwheat (*Eriogonum fasciculatum*), lemonade berry (*Rhus integrifolia*), poison oak (*Toxicodendron diversiloba*), purple sage (*Salvia leucophylla*), and black sage (*Salvia mellifera*; Ornduff et al. 2003). Additional common species include brittlebush (*Encelia californica*), chamise (*Adenostoma fasciculatum*), white sage (*Salvia apiana*), Our Lord's candle (*Hesperoyucca whipplei*), and prickly pear cactus (*Opuntia*; Hall 2007). Where more water was available, riparian zone plants were characterized by more trees than the drier coastal sage scrub. These included willows (*Salix lasiolepis, Salix lucida*), Fremont's cottonwood (*Populus fremontii*), Western sycamore (*Platanus racemosa*), white alder *(Alnus rhombifolia*), big-leaf maple (*Acer macrophyllum*), coast live oak (*Quercus agrifolia*), and California bay laurel (*Umbellularia californica*). Ground cover includes sedges (*Carex* spp.), rushes (*Juncus* spp.), bunchgrasses (*Festuca californica*, *Melica californica*), berries (*Rubus* spp.), and monkeyflowers (*Mimulus* spp.; Ornduff et al. 2003).

Large native land mammals of the region included mule deer (*Odocoileus hemionus*), bighorn sheep ([1]‡*Ovis canadensis*), tule elk (‡*Cervus canadensis nannodes*), pronghorn (‡*Antilocapra americana*), bison (‡*Bison bison*), bobcat (‡*Lynx rufus*), mountain lion (‡*Felis concolor*), jaguar (‡*Panthera onca*), coyote (*Canis latrans*), grey wolf (‡*Canis lupus*), black and grizzly bears (‡*Ursus americana,* ‡*Ursus arctos*; California Department of Fish and Game 2020). Smaller native fauna included rabbits (‡*Lepus californicus, Sylvilagus audubonii*, ‡*Sylvilagus bachmani*), desert tortoise (‡*Gopherus agassizii*), and numerous other species.

Today, after approximately a century of urban and suburban development, the vegetation of the area is instead typified by imported species. Grasses such as slender wild oat (*Avena barbata*), ripgut brome (*Bromus diandrus*), and giant reed (*Arundo donax*); shrubs and trees including blackwood acacia (*Acacia melanoxylon*), saltcedar (*Tamarix ramosissima*), eucalyptus (*Eucalyptus* spp.), and Brazilian pepper (*Schinus terebinthifolius*) are common (Cal-IPC 2006). In recent history, urban development has driven most animals from the area, although mule deer, bobcat, and coyotes still occur in the surrounding hills.

PREHISTORIC SETTING

Approaches to prehistoric frameworks have changed over the past half century from being based on material attributes to radiocarbon chronologies to association with cultural traditions. Archaeologists defined a material complex consisting of an abundance of milling stones (for grinding food items) with few projectile points or vertebrate faunal remains dating from about 7 to 3 thousand years before the present as the “Millingstone Horizon” (Wallace 1955). Later, the “Millingstone Horizon” was redefined as a cultural tradition named the Encinitas Tradition (Warren 1968) with various regional expressions including Topanga and La Jolla. Use by archaeologists varied as some adopted a generalized Encinitas Tradition without regional variations, some continued to use “Millingstone Horizon” and some used Middle Holocene (the time period) to indicate this observed pattern (Sutton and Gardner 2010:1-2).

Recently, it was recognized that generalized terminology is suppressing the identification of cultural, spatial, and temporal variation and the movement of peoples throughout space and time. These factors are critical to understanding adaptation and change (Sutton and Gardner 2010:1-2). The Encinitas Tradition characteristics are abundant metates and manos, crudely made core and flake tools, bone tools, shell ornaments, very few projectile points with subsistence focusing on collecting (plants, shellfish, etc.; Sutton and Gardner 2010:7). Faunal remains vary by location but include shellfish, land animals, marine mammals, and fish.

[1] ‡ - Indicates that the species has been extirpated from Southern California.

The Encinitas Tradition is currently redefined as comprising four geographical patterns (Sutton and Gardner 2010:8-25). These are (1) Topanga in coastal Los Angeles and Orange counties, (2) La Jolla in coastal San Diego County, (3) Greven Knoll in inland San Bernardino, Riverside, Orange, and Los Angeles counties, and (4) Pauma in inland San Diego County.

About 3,500 years before present the Encinitas Tradition was replaced in the greater Los Angeles Basin by the Del Rey Tradition (Sutton 2010). This tradition has been generally assigned to the Intermediate and Late Prehistoric periods. The changes that initiated the beginning of the Intermediate Period include new settlement patterns, economic foci, and artifact types that coincided with the arrival of a biologically distinctive population. The Intermediate and Late Prehistoric periods have not been well-defined. Many archaeologists have proposed, however, that the beginning of the Intermediate marked the arrival of Takic-speaking groups (from the Mojave Desert, southern Sierra Nevada, and San Joaquin Valley) and that the Late Prehistoric Period reflected Shoshonean groups (from the Great Basin). Related cultural and biological changes occurred on the southern Channel Islands about 300 years later.

As defined by Sutton (2010), the Del Rey Tradition replaces usage of the Intermediate and Late Prehistoric designations for both the southern California mainland and the southern Channel Islands. Within the Del Rey Tradition are two regional patterns named Angeles and Island. The Del Rey Tradition represents the arrival, divergence, and development of the Gabrielino in southern California.

PREHISTORIC CHRONOLOGY

The latest cultural revisions for the Project Area define traits for time phases of the Topanga pattern of the Encinitas Tradition applicable to coastal Los Angeles and Orange counties (Sutton and Gardner 2010; Table 1). This pattern is replaced in the Project Area by the Angeles pattern of the Del Rey Tradition later in time (Sutton 2010).

Table 1. Cultural Patterns and Phases

Phase	Dates BP	Material Culture	Other Traits
Topanga I	8,500 to 5,000	Abundant manos and metates, many core tools and scrapers, few but large points, charmstones, cogged stones, early discoidals, faunal remains rare	Shellfish and hunting important, secondary burials under metate cairns (some with long bones only), some extended inhumations, no cremations
Topanga II	5,000 to 3,500	Abundant but decreasing manos and metates, adoption of mortars and pestles, smaller points, cogged stones, late discoidals, fewer scraper planes and core tools, some stone balls and charmstones	Shellfish important, addition of acorns, reburial of long bones only, addition of flexed inhumations (some beneath metate cairns), cremations rare

Phase	Dates BP	Material Culture	Other Traits
Topanga III	3,500 to 1,000	Abundant but decreasing manos and metates, increasing use of mortars and pestles, wider variety of small projectile points, stone-lined ovens	Hunting and gathering important, flexed inhumations (some under rock cairns), cremations rare, possible subsistence focus on yucca/agave
Angeles IV	1,000 to 800	Cottonwood arrow points for arrows appear, *Olivella* cupped beads and *Mytilus* shell disks appear, some imported pottery appears, possible appearance of ceramic pipes	Changes in settlement pattern to fewer but larger permanent villages, flexed primary inhumations, cremations uncommon
Angeles V	800 to 450	Artifact abundance and size increases, steatite trade from islands increases, larger and more elaborate effigies	Development of mainland dialect of Gabrielino, settlement in open grasslands, exploitation of marine resources declined and use of small seeds increased, flexed primary inhumations, cremations uncommon
Angeles VI	450 to 150	Addition of locally made pottery, metal needle-drilled *Olivella* beads, addition of Euro-American material culture (glass beads and metal tools)	Use of domesticated animals, flexed primary inhumations continue, some cremations

Topanga Pattern groups were relatively small and highly mobile. Sites known are temporary campsites, not villages, and tend to be along the coast in wetlands, bays, coastal plains, near-coastal valleys, marine terraces, and mountains. The Topanga toolkit is dominated by manos and metates with projectile points scarce (Sutton and Gardner 2010:9).

In Topanga Phase I other typical characteristics were a few mortars and pestles, abundant core tools (scraper planes, choppers, and hammerstones), relatively few large, leaf-shaped projectile points, cogged stones, and early discoidals. Secondary inhumation under cairns was the common mortuary practice. In Orange County, as many as 600 flexed burials were present at one site and dated 6,435 radiocarbon years before present (Sutton and Gardner 2010:9, 13).

In Topanga Phase II, flexed burials and secondary burial under cairns continued. Adoption of the mortar and pestle is a marker of this phase. Other typical artifacts include manos, metates, scrapers, core tools, discoidals, charmstones, cogged stones, and an increase in the number of projectile points. In Orange County, stabilization of sea level during this time period resulted in increased use of estuary, near shore, and local terrestrial food sources (Sutton and Gardner 2010:14-16).

In Topanga Phase III, there was continuing abundance of metates, manos, and core tools plus increasing amounts of mortars and pestles. More numerous and varied types of projectile points are observed along with the introduction of stone-line earthen ovens. Cooking features such as these were possibly used to bake yucca or agave. Both flexed and extended burials are known (Sutton and Gardner 2010:17).

The Angeles pattern generally is restricted to the mainland and appears to have been less technologically conservative and more ecologically diverse, with a largely terrestrial focus and greater emphases on hunting and nearshore fishing (Sutton 2010).

The Angeles IV phase is marked by new material items including Cottonwood points for arrows, *Olivella* cupped beads, *Mytilus* shell disks, birdstones (zoomorphic effigies with magico-religious properties), and trade items from the Southwest including pottery. It appears that populations increased and that there was a change in the settlement pattern to fewer, but larger, permanent villages. Presence and utility of steatite vessels may have impeded the diffusion of pottery into the Los Angeles Basin. The settlement pattern altered to one of fewer and larger permanent villages. Smaller special-purpose sites continued to be used (Sutton 2010).

Angeles V components contain more and larger steatite artifacts, including larger vessels, more elaborate effigies, and comals. Settlement locations shifted from woodland to open grasslands. The exploitation of marine resources seems to have declined and use of small seeds increased. Many Gabrielino inhumations contained grave goods while cremations did not (Sutton 2010).

The Angeles VI phase reflects the ethnographic mainland Gabrielino of the post-contact period (i.e., after A.D. 1542; Sutton 2010). One of the first changes in Gabrielino culture after contact was undoubtedly population loss due to disease, coupled with resulting social and political disruption. Angeles VI material culture is essentially Angeles V augmented by a number of Euro-American tools and materials, including glass beads and metal tools such as knives and needles (used in bead manufacture). The frequency of Euro-American material culture increased through time until it constituted the vast majority of materials used. Locally produced brownware pottery appears along with metal needle-drilled Olivella disk beads.

The ethnographic mainland Gabrielino subsistence system was based primarily on terrestrial hunting and gathering, although nearshore fish and shellfish played important roles. Sea mammals, especially whales (likely from beached carcasses), were prized. In addition, a number of European plant and animal domesticates were obtained and exploited. Ethnographically, the mainland Gabrielino practiced interment and some cremation.

ETHNOGRAPHY

The Gabrielino speak a language that is part of the Takic language family. Their territory encompassed a vast area stretching from Topanga Canyon in the northwest, to the base of Mount Wilson in the north, to San Bernardino in the east, Aliso Creek in the southeast and the Southern Channel Islands, in all an area of more than 2,500 square miles (Bean and Smith 1978; McCawley 1996; Figure 4). At European contact, the tribe consisted of more than 5,000 people

living in various settlements throughout the area. Some of the villages could be quite large, housing up to 150 people.

The Gabrielino are considered to have been one of the wealthiest tribes and to have greatly influenced tribes they traded with (Kroeber 1976:621). Houses were domed, circular structures thatched with tule or similar materials (Bean and Smith 1978:542). The best-known artifacts were made of steatite and were highly prized. Many common everyday items were decorated with inlaid shell or carvings reflecting an elaborately developed artisanship (Bean and Smith 1978:542).

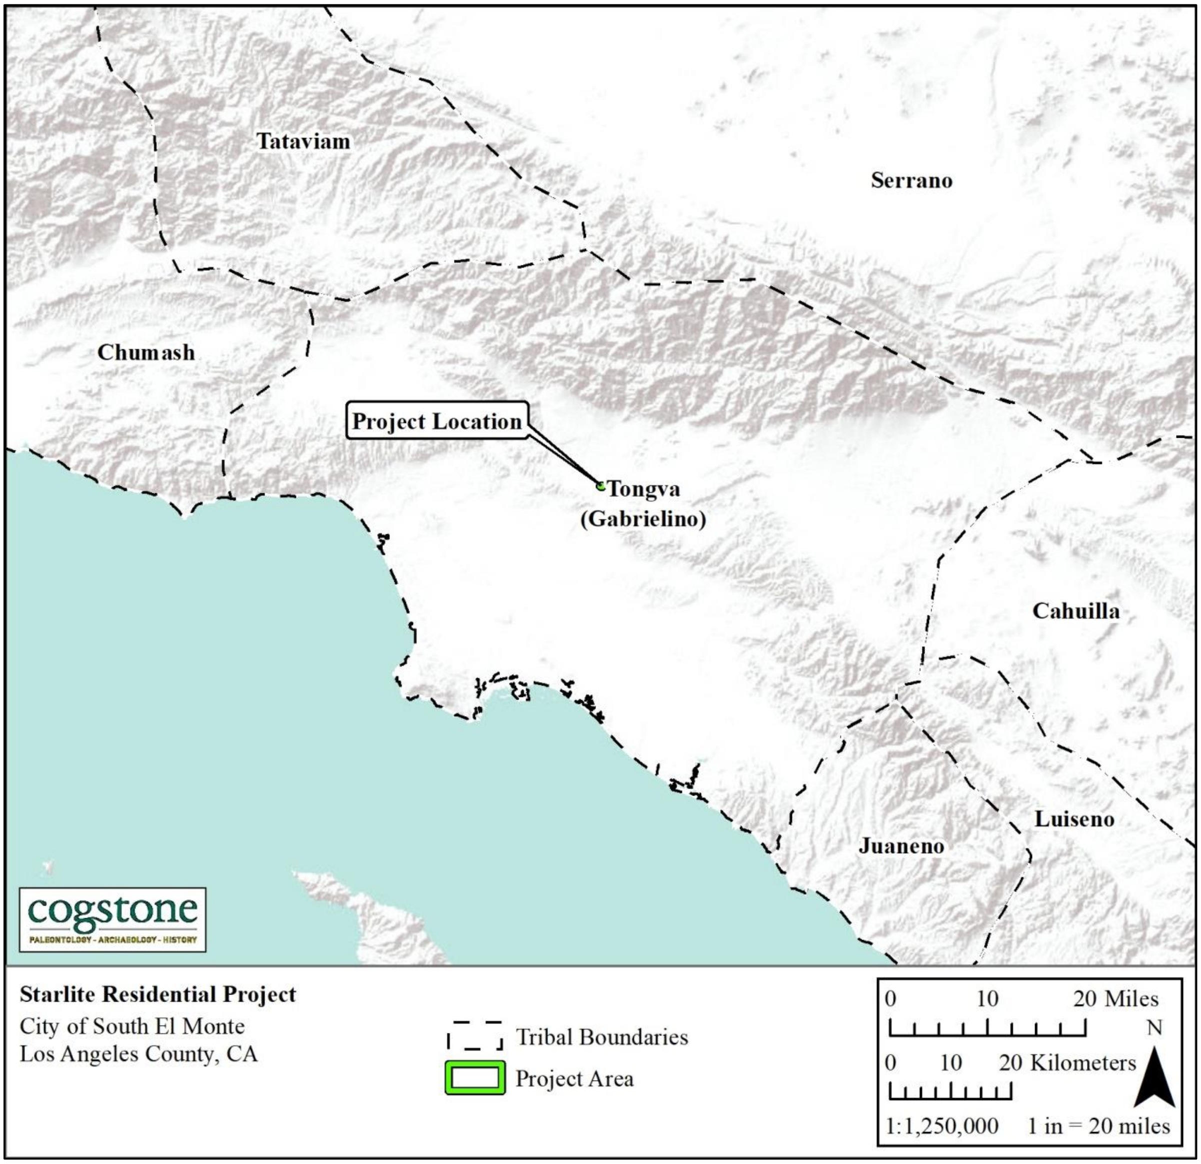

Figure 4. Tribal Boundary Map

The main food zones utilized were marine, woodland, and grassland (Bean and Smith 1978). Plant foods were, by far, the greatest part of the traditional diet at contact. Acorns were the most important single food source. Villages were located near water sources necessary for the leaching of acorns, which was a daily occurrence. Grass seeds were the next most abundant plant food used along with chia. Seeds were parched, ground, and cooked as mush in various combinations according to taste and availability. Greens and fruits were eaten raw or cooked or sometimes dried for storage. Bulbs, roots, and tubers were dug in the spring and summer and usually eaten fresh. Mushrooms and tree fungus were prized as delicacies. Various teas were made from flowers, fruits, stems, and roots for medicinal cures as well as beverages (Bean and Smith 1978:538-540).

The principal game animals were deer, rabbit, jackrabbit, woodrat, mice, ground squirrels, antelope, quail, dove, ducks, and other birds. Most predators were avoided as food, as were tree squirrels and most reptiles. Trout and other fish were caught in the streams, while salmon were available when they ran in the larger creeks. Marine foods were extensively utilized. Sea mammals, fish, and crustaceans were hunted and gathered from both the shoreline and the open ocean, using reed and dugout canoes. Shellfish were the most common resource, including abalone, turbans, mussels, clams, scallops, bubble shells, and others (Bean and Smith 1978:538-540).

HISTORIC SETTING

EARLY CALIFORNIA HISTORY

Juan Cabrillo was the first European to sail along the coast of California in 1542 and was followed in 1602 by Sebastian Vizcaino. Between 1769 and 1821 the Spanish had colonized California and established missions, presidios and pueblos (Bean and Rawls 1993).

In 1821, Mexico won its independence from Spain and worked to lessen the wealth and power held by the missions. The Secularization Act was passed in 1833, giving the vast mission lands to the Mexican governor and downgrading the missions' status to that of parish churches. The governor then redistributed the former mission lands in the form of grants, to private owners. Ranchos in California numbered over 500 by 1846, all but approximately 30 of which resulted from land grants (Bean and Rawls 1993). The Project Area is within the Ranch Potrero Grande land grant (Figure 5) that was given in 1845 by Governor Pio Pico to Manuel Antonio. Juan Matias Sanchez bought the Rancho from Manuel Antonio. Sanchez also owned the adjacent Rancho La Merced.

The Mexican-American war followed on the heels of the Bear Flag Revolt of June 1846 (Ohles 1997). General Andrés Pico and John C. Frémont signed the Articles of Capitulation in December 1847, and with the signing of the Treaty of Guadalupe Hidalgo in February 1848, hostilities ended and Mexico relinquished California to the United States. Under the treaty,

Mexico ceded the lands of present-day California, New Mexico and Texas to the U.S. for $15 million (Fogelson 1993:10). Within two years following the treaty, California applied for admission as a state.

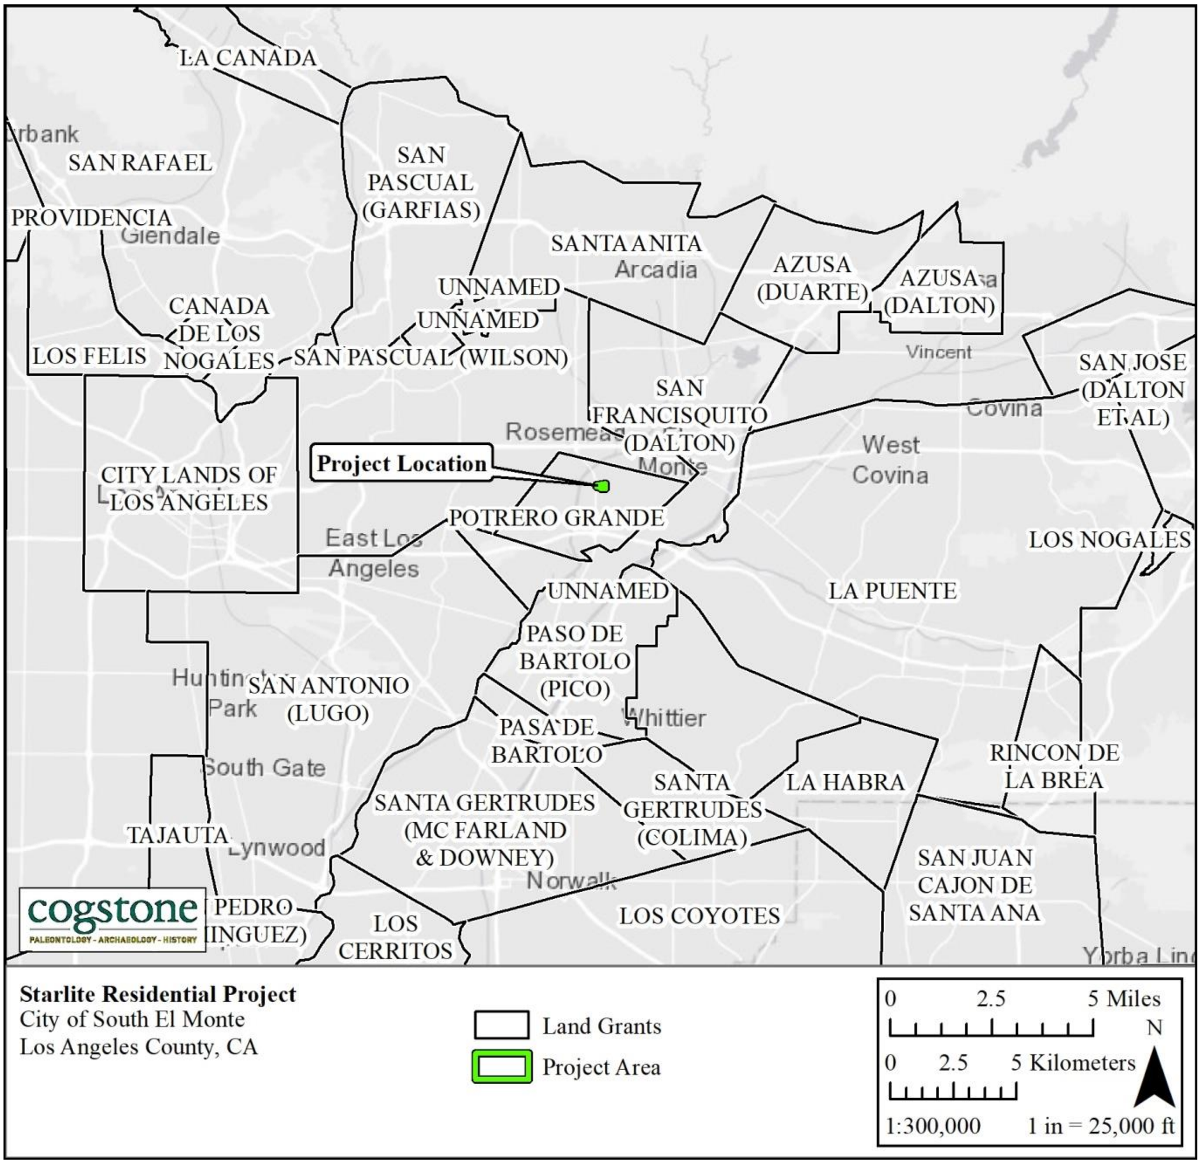

Figure 5. Land Grant Map

South El Monte

Prior to Mexican-American War in 1849 and the arrival of Anglo-American settlers, much of what is now the City of South El Monte was owned by wealthy Californios. After the end of the war and the signing of the Treaty of Guadalupe Hidalgo, the old land grants issued during the Spanish and Mexican eras were disregarded by the U.S. Government. American pioneers quickly moved in to stake their claim, among the most notorious were "the Monte Boys," a vigilante group infamous for committing acts of arson and lynching.

Most of the population and labor force in El Monte during the 20th century was comprised of people of Mexican, Japanese, and Chinese descent (Greenspon 2020). Settlement in El Monte was largely segregated with the Hispanic population restricted to renting barrios on the outskirts of town. From 1930 to 1970, the population of El Monte experienced a considerable increase from 3,479 to 69,892 (Guzman et al. 2020). During the mid-20th century, residents of South El Monte desired to join the City of El Monte, but their attempts were rejected as the land was not considered a worthwhile addition to the City. As a result, South El Monte incorporated as an official city within Los Angeles County on July 30, 1958.

In 1975, South El Monte received the "All American City" award for its civic efforts in community improvement. Shortly after receiving this award, the City was referred to as "The City of Achievement," a slogan which appears on South El Monte's official city seal. At present, the 2.8 square miles of the City is comprised of 30 percent residential areas with the remaining 70 percent occupied by industrial and manufacturing facilities. Per the 2019 U.S. Census Bureau, the population of South El Monte isapproximately 20,574, with an 84 percent Hispanic community (El Monte in Time 2020).

PROJECT AREA HISTORY

The earliest available United States Department of Agriculture (USDA) historic aerial photograph dates to 1948 and shows building development and landscaping within the Project Area. The Starlight Drive-In theater opened in South El Monte on June 14, 1950. Key physical features of the Starlite Drive-In theater were the Art Modern/Googie-style theater sign (still extant), large parking area, concessions building (demolished February/March 2021), and concrete projection screen (demolished 1997). By 1951, operation of the facility was taken over by Pacific Theaters. Beginning in the 1950s, when not in use as a theater, the Starlite parking lot hosted the local swap meet, now known as the Starlite Swap Meet (Guzman et al. 2020). The original screen was demolished in 1997 and since then the grounds are used exclusively for swap meets.

The earliest known depiction of the single family residence at 2550 Chico Avenue (the northeast corner of the Project Area) is in a 1948 USDA historic aerial photograph (NETROnline 1948). The existing residence appears to be in its current condition with two ancillary buildings south of the residence. By 1952, one of the large ancillary buildings immediately south of the residence is demolished (FrameFinder 1952). In 1958, it appears the large wood-frame shelter immediately west of the resident is present (FrameFinder 1958). The two remaining ancillary buildings from the previous 1949 aerial photograph are demolished by this time as well. By 1968, the previous wood shelter at the west elevation of the residence is replaced by the current (larger) wood framed structure. By 1968, the tall wood fence of the adjacent Starlite Drive-In theater is erected at the west and southern boundaries of the residence. There appears to be no notable changes to the residence or the property boundary with the exception of the large trees at the eastern

boundary of the property (trees are first visible in 2005; (NETROnline 2005)). There is a small shed located southwest of the residence; however, the age of this shed or when it first appeared on the property is not known.

The earliest known depiction of the single story commercial building located at 2550 Chico Avenue (the southeast corner of the Project Area) in a 1952 USDA historic aerial photograph (NETROnline 1952). The building is shown with a flat roof and square footprint. Throughout the 1950s, 1960s, and into the early 1970s aerials show multiple addition to the exterior of the building altering its original footprint from square to irregular (NETROnline 1953, 1964, and 1972). By 1972, the building received its final exterior addition and the overall shape of the building remained unaltered until 2021 (Google Maps 2021).

DRIVE-IN MOVIE THEATERS

The drive-in movie theater is an iconic symbol of 20th century American culture. Described as part movie theater and part theme park, the drive-in melded America's growing car culture with their love of cinema. The origin of the first drive-in theater in the United States can be traced back to chemical company tycoon Richard M. Hollingshead Jr. in the early 1930s. At the time of the Great Depression, Hollingshead deduced that the automobile and the movies were considered essentials to the American people. After much experimentation, he found it possible to broadcast movie audio from speakers while projecting a movie from a 16-millimeter projector onto a sheet spread between two trees in his yard (Skrdla 2014).

On August 6, 1932, Hollingshead filed a patent (No. 1,909,537) for a drive-in theater (Figures 6 and 7). On June 6, 1933, he opened the first drive-in on Crescent Boulevard in Camden, New Jersey. Key features of the drive-in included a large parking area, concession stand, large outdoor movie screen, and a projection booth. However, despite his patent, it was relatively simple for others to replicate and open their own drive-ins although initial progress was slow. For the first few years, the development of additional theaters was sluggish due to the Depression-era economy and the issues of fine tuning the technology to improve the quality of projection and audio performance (Skrdla 2014).

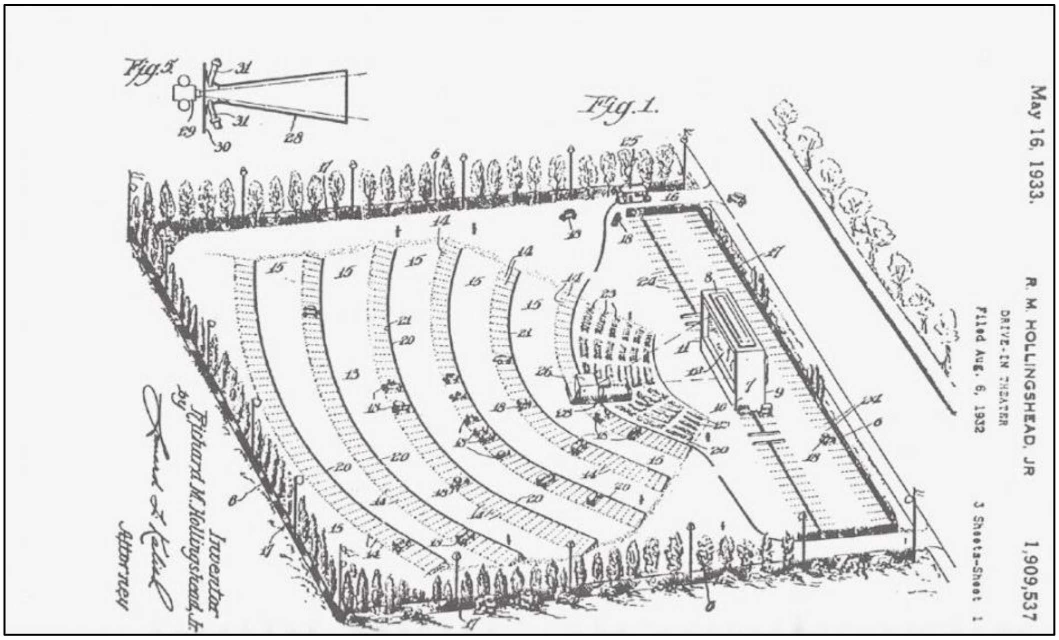

Figure 6. Hollingshead's Drive-In patent (Skrdla 2014)

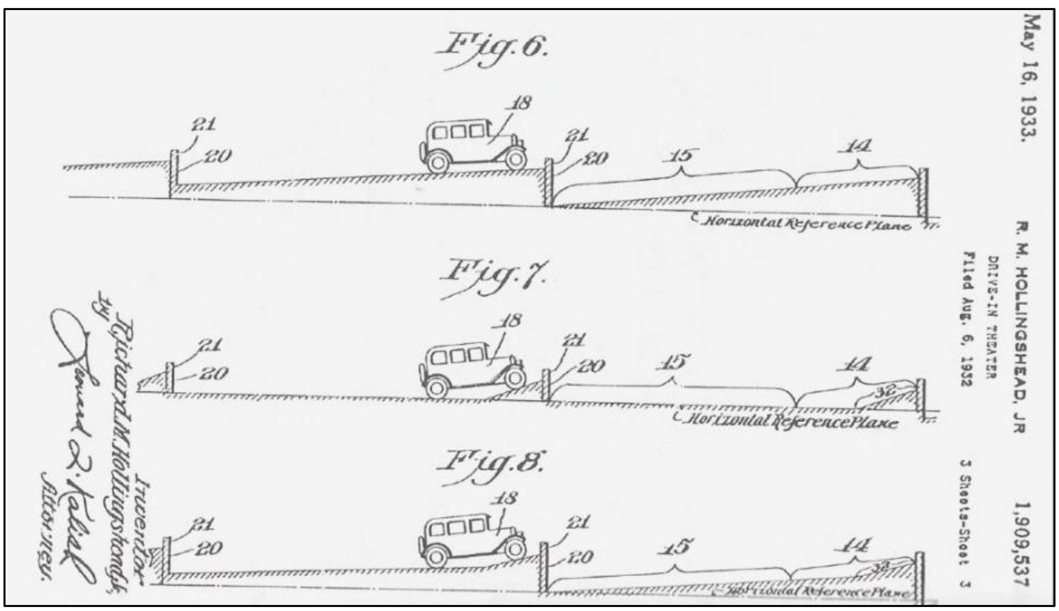

Figure 7. Hollingshead's ramp design (Skrdla 2014)

Upon the outbreak of World War II, drive-in construction came to a halt and did not restart until after 1945. During the postwar-era and the baby boom, the number of drive-ins tripled from 100 locations pre-war to 300 by 1947. By 1950, the number reached 1,700 and climb to its peak (within the United States) to 3,700 locations by 1958 (Skrdla 2014).

To increase profits, drive-in owners endeavored to keep customers and their families on the property for as long as possible to encourage purchases at the concessions stand. Such attractions included playgrounds, petting zoos, picnic areas, etc. Mobile concessions carts travelled the lot offering food and beverages. Prior to dusk, activities such as beauty contests, dance competitions, and car rallies were also held.

The 1950s and 1960s marked the height of drive-in popularity. The popularity of drive-ins was such that the film industry at the time evolved to produce films specifically tailored to outdoor viewing venues (such as *The Blob* 1958 and *Night of the Living Dead* 1968). However, with the growing popularity of home television and increasing gas prices, attendance experienced a substantial decline during the 1970s (Skrdla 2014).

THE STARLITE DRIVE-IN THEATER

The Starlite Drive-In theater was designed by J. Arthur Drielsma and was originally operated by brothers Ford and Carl Bratcher and Byron Congdon (Boxoffice 1950). By 1951, operation of the facility was taken over by Pacific Theaters. According to the 1951 Boxoffice article "Merchandising the Drive-In," the marquee at the Starlite Drive-In theater was installed by the Los Angeles office of B. F. Shearer; the sign letters are associated with the Wagner brand (this brand is still manufactured today). The sign was described as a "dramatic arrangement" complete with "flashing stars" (Boxoffice 1951; Figures 8 to 11). Despite the closure of the drive-in's original location, the Starlite Drive-In theater company still exists as of March 2021 as a traveling pop-up theater complete with a large inflatable screen, projector, and high grade FM transmitter (Maloney-Rames 2020).

J. ARTHUR DRIELSMA

(March 1, 1902-April 15, 1981; Figure 12)

Mr. Drielsma graduated from the University of Illinois with a Bachelor's of Science in 1923 and also attended the Fontainbebleau School of Fine Arts, Fontainbebleau, France that same year. He worked as a draftsman for Schmidt, Garden & Erickson from 1924 to 1925, Ralph C. Harris in 1926, and B. Leo Steif and Company in 1927, having married Pauline Steif in March 1926 (Family Search 2021). Later he was a named partner with Sobel & Drielsma until 1946 when he founded the firm that bore his name solo, J. Arthur Drielsma. The 1955 American Architects Directory notes that Mr. Drielsma was a listed member of the American Institute of Architects (AIA), Pasadena Chapter. The majority of Mr. Drielsma's body of work includes commercial and light industrial buildings such as:

- Fiesta Four Drive-In (1949)
- Magnolia Drive-In (1950)
- Starlite Drive-In theater (1950)
- South Lamont Drive-In (1950)
- Sunland Drive-In (1950)
- Big Sky Drive-In Theater (1951)
- Whittier Drive-In Theater, (1952)
- Citizens National Bank, (1953)
- L.A. Mirada Drive-In Theater, (1954)
- Edwards San Gabriel Drive-In Theater, & Roger Young Auditorium Rest, (1955)
- San Gabriel Drive-In (1955)
- Sky View Drive-In (1955)
- Smith's Ranch Drive-In/Clemon's Drive-In (1956)
- Lancaster Drive-In (1956)
- Kailua Drive-In (1965)

Including the Starlite Drive-In theater, Mr. Drielsma is responsible for the design of at least 14 drive-in movie theaters, the majority located in the State of California. Only the Starlite-Drive in (South El Monte, CA) and the Smith's Ranch Drive-In/Clemon's Drive-In (Twentynine Palms, CA) are known to remain. While the original Starlite Drive-In theater closed in the late 1990s, the Smith Ranch Drive-In remains in operation as a drive-in theater (Koyl 1955; *Cinema Treasures* n.d.).

RECORDS SEARCHES

PALEONTOLOGICAL RECORD SEARCH

A record search of the Project was obtained from the Natural History Museum of Los Angeles County (LACM; Bell 2021; Appendix B). Additional records from the University of California Museum of Paleontology database (UCMP 2021), the PaleoBiology Database (PBDB 2021), in published literature (Jefferson 1991a, 1991b), and in previous record searches from the Natural History Museum of Los Angeles County, were also consulted.

No recorded paleontological localities producing vertebrate fossils were found within the Project Area or within a 1-mile radius of the Project Area. However, the museum does record localities near to the Project Area from the same or similar sedimentary deposits (Table 2). The closest locality the museum has recorded is approximately 5.5 miles west of the Project, which produced a fossil of extinct horse (*Equus* sp.) at an unknown depth below the surface. The most notable vertebrate fossil localities for which the museum retains records are recorded from between 8.75 and 8.8 miles southwest of the Project Area from Lincoln Park and Montecito Heights. Extinct animals from these sites include Harlan's ground sloth (†[2]*Paramylodon harlani*), saber-toothed cat (†*Smilodon fatalis*), Pacific mastodon (†*Mammut pacificus* [was *M. americanum*; Dooley et al. 2019]), mammoth (†*Mammuthus* sp.), horse (†*Equus* sp.), camel (†*Camelops* sp.), and California turkey (†*Meleagris californica*).

Table 2. Known Pleistocene Fossils in the Vicinity of the Project Area
Extinct animals are noted by † although all fossils from deposits older than Pleistocene are likely from extinct species.

Common Name	Taxon	Depth below original surface	Formation at surface	Locality	Location	Reference
horse	†*Equus* sp.	unknown	Holocene or late Pleistocene alluvium	LACM VP 3363	West of Monterey Pass Road in Coyote Pass; east of the Long Beach Freeway and south of the north boundary of Section 32; East Los Angeles; 5.5 miles west of current project	Bell 2021
sea snail	*Turritella sp.*	unknown	middle to late Pleistocene old alluvial fan (Qof)	LACMIP 20258	Brickyard, S. Ferris Ave., Belvedere Gardens; ~6 miles southwest of project	Bell 2021
moon snail	Naticidae					

[2] †- indicates that the species is extinct

Common Name	Taxon	Depth below original surface	Formation at surface	Locality	Location	Reference
three-spine stickleback	*Gasterosteus aculeatus*	11 to 34 feet	young alluvium (Qya2)	LACM 7701, 7702	Bell Gardens: near the intersection of Atlantic Ave. and I-710 north of the Los Angeles River; ~7.75 miles southwest of current project	Bell 2021
salamander	*Batrachoseps* sp.					
lizard	Lacertilia					
constrictor snake	Colubridae					
rabbit	*Sylvilagus* sp.					
pocket mouse	*Microtus* sp.					
harvest mouse	*Reithrodontomys* sp.					
pocket gopher	*Thomomys* sp.					
California turkey	†*Meleagris californica*	unknown	Pleistocene older alluvial fan (Qof4)	LACM 1023	near the intersection of Workman St. or Alhambra Ave., Montecito Heights; 8.75 miles west of current project	Jefferson 1991a, 1991b; McLeod 2018
sabertoothed cat	†*Smilodon fatalis*					
horse	†*Equus sp.*					
deer	*Odocoileus* sp.					
western pond turtle	*Actinemys marmorata*	20-35 feet	Pleistocene older alluvial fan (Qof$_4$)	LACM 2032	near the intersection of Mission Rd. or Daly St., Lincoln Park; 8.8 miles west of current project	Jefferson 1991a, 1991b; McLeod 2017
Harlan's ground sloth	†*Paramylodon harlani*					
Pacific mastodon	† *Mammut pacificus* [was *M. americanum*; Dooley et al. 2019]					
mammoth	†*Mammuthus* sp.					
horse	†*Equus* sp.					
camel	†*Camelops* sp.					
horse	†*Equus sp.*	2 feet	La Habra Formation (Pleistocene)	LACM 3347	11204 Bluefield; Whittier; ~9.5 miles southeast of current project	Bell 2021
horse	†*Equus sp.*	43 feet	Pleistocene younger alluvial fan (Qyf2)	LACM 1755	near the intersection of Hill St. or 12th St., Los Angeles (Fashion District); 11.5 miles southwest of current project	McLeod 2018

CALIFORNIA HISTORIC RESOURCES INFORMATION SYSTEM

Cogstone requested a search of the California Historic Resources Information System (CHRIS) from the South Central Coastal Information Center (SCCIC) on February 12, 2021 that included the entire proposed Project Area as well as a half-mile radius. The SCCIC completed the request on March 17, 2021. Results of the record search indicate that seventeen previous studies have been completed within a half-mile of the proposed Project Area (Table 3). There are no previous studies within the Project Area.

OTHER CULTURAL SOURCES

In addition to the SCCIC records search, a variety of sources were consulted in February 2021 to obtain information regarding the cultural context of the Project Area (Table 5). Sources included the National Register of Historic Places (NRHP), the California Register of Historic Resources (CRHR), California Built Environment Resources Directory (BERD), California Historical Landmarks (CHL), and California Points of Historical Interest (CPHI). Specific information about the Project Area, obtained from historic-era maps and aerial photographs, is presented in the Project Area History section.

Table 5. Additional Sources Consulted

Source	Results
National Register of Historic Places (NRHP; 1979-2002 & supplements)	negative
Historic USGS Topographic Maps	The USGS earliest topographic map for the Project Area (PA) is the 1894 Los Angeles 15’ topographic map (1:62500; USGS) which shows no built environment within the PA. There are no visible changes within the PA between 1894 and 1923 according to the topographic maps. The 1926 El Monte 7.5’ topographic map (1:24000; USGS) shows no changes within the PA but shows a developed street grid with some building development just outside of the PA. The 1948 El Monte 7.5’ topographic map (1:24000; USGS) shows more residential development outside of the PA. The 1953 El Monte 7.5’ topographic map (1:24000; USGS) shows the Starlite Drive-In theater and one building (the concessions building) within the PA. The 1966 El Monte 7.5’ topographic map (1:24000; USGS) shows more building development within the PA. There is no change in development between 1966 and 1994 (El Monte 1:24,000; USGS) according to the topographic maps.

Source	Results
Historic US Department of Agriculture Aerial Photographs	The earliest USDA historic aerial photograph dates to 1948 (NETROnline) and shows building development and landscaping within the PA. The 1952 historic aerial photograph (NETROnline) shows the Starlite Drive-In theater within the PA. The 1953 historic aerial photograph (NETROnline) shows some building structure changes at the southeast end of the PA. Between 1953 (NETROnline) and 1964 (NETROnline) more buildings were developed within the PA. There are no visible changes between 1964 and 2004 (NETROnline) according to the historic aerial photographs. The PA appears largely unaltered between 2004 and 2016 (NETROnline) but cars and stall spaces are shown being used within the PA for the occasional swap meet.
California Register of Historical Resources (CRHR; 1992-2014)	negative
California Built Environment Resources Directory (BERD)	negative

HISTORICAL SOCIETY REQUEST FOR INFORMATION

A total of four historical societies were consulted for information regarding the Project. A summary of the consultation with each party is summarized below and located in Appendix C.

El Monte Historical Society: Three attempts were made to request information regarding the Project; one by USPS mail on February 18, 2021 and two by email on February 26, 2021 and March 16, 2021. No response has been received.

La Historia Historical Society: Three attempts were made to request information regarding the Project; one by mail on February 18, 2021 and two by email on February 25 and March 16, 2021. On March 19, 2021, an email response was received from Rosa Peña, president of the La Historia Historical Society. Ms. Peña stated that she did not have information regarding the Starlite Drive-In theater but would like to speak on the phone with Cogstone Architectural Historian, Ms. Lopez, regarding the Project. A meeting was set for Monday (March 22, 2021) afternoon via telephone.

At 12:30 pm on March 22, 2021, Ms. Lopez spoke via telephone with Ms. Peña. Ms. Peña expressed her support of the preservation of the Starlite Drive-In sign and offered that should the owner of the property have no interest in preserving the sign, the La Historia Historical Society is willing to take possession of the sign and house it offsite if necessary. Ms. Peña also offered to conduct additional background research regarding the single-family residence located at the northeast corner of the Project Area.

Los Angeles Conservancy: One initial attempt was made to request information from the conservancy by mail and email on February 18, 2021. Cogstone received acknowledgement of the request for information by Erik Van Breene on February 18, 2021 by email. Mr. Van Breen was notified of the recent demolition of key features of the Starlite Drive-In on March 2, 2021 and his opinion regarding the integrity of the property as a whole was requested. On March 3, 2021, Mr. Van Breene replied via email stating, "Even without the concession stand/projection booth I think the sign should be retained as a historic resource. For future projects dealing with theaters I'd recommend you reach out to the Los Angeles Historic Theater Foundation."

Los Angeles Historic Theatre Foundation: Per the request of Erik Van Breen on the Los Angeles Conservancy, attempts were made to contact the Los Angeles Historic Theatre Foundation to request their input regarding the Project. Three attempts were made via email on March 3 and March 16, 2021. No response has been received.

United Drive-In Theatre Owners Association (UDITOA)

On April 14, 2021, a request for information was sent to the United Drive-In Theatre Owners Association (UDITOA) regarding assistance for identifying the function of certain features of the Starlite Drive-In sign. On April 16, 2021, a reply was received via email from D. Edward Vogel, a Staff member of the association and owner of the Bengies Drive-In Theatre in Baltimore, MD. Mr. Vogel expressed his interest in assisting Cogstone and provided his personal email and phone number. On April 22, 2021, Ms. Lopez consulted with Mr. Vogel by phone. Mr. Vogel was provided with historic and modern photographs of the Starlite Drive-In theatre sign and was asked his opinion on what he believed what the purpose of the large tower at the back of the sign. Mr. Vogel stated with confidence that he believed the tower was original to the sign and was most likely used to house the different sized lettering and numbers which would be installed on the sign's changeable copy panel. The largest letters/ numbers would be stored at the top wall area of the interior of the tower, the medium sides letters in the middle, and the smaller letters at the bottom. The tower would have also housed ladders and a long pole with hook used to change out the sign letters.

Mr. Vogel also observed that at some point in time the signs original back-lit changeable copy panel was replaced with a front lit panel. The back-lit changeable copy panel (as seen in a ca.

1949 historic photograph of the sign) would have been made of glass and illuminated from the inside of the sign. Ms. Vogel stated that it was common for the glass panels to break and due to the financial cost of constantly replacing these materials it was common for drive-in owners to exchange the back-lit panels for front lit panels. Mr. Vogel pointed out the lighting equipment fixed above the changeable copy panel as a component of this change.

Mr. Vogel expressed his interest in the sign and his opinion that it should be saved from demolition and preserved.

NATIVE AMERICAN CONSULTATION

A Sacred Lands File (SLF) search requested from the Native American Heritage Commission (NAHC) on February 12, 2021 indicated that there are sacred lands or resources known within the Project Area (Appendix D). The NAHC recommended that eight representatives from local Native American tribal organizations be contacted for further information regarding the Project vicinity. The City of South El Monte is conducting tribal consultations to meet the requirements of Assembly Bill 52 and Senate Bill 18.

SURVEY

METHODS

The survey stage is important in a Project's environmental assessment phase to verify the exact location of each identified resource. All undeveloped ground surface areas within the Project Area were examined. Existing ground disturbances (e.g., cutbanks, ditches, animal burrows, etc.) were visually inspected. Photographs of the Project Area, including ground surface visibility and items of interest, were taken with a digital camera.

For paleontological resources, the purpose is to confirm that field observations conform to the geological maps of the Project Area. Sediments were assessed for their potential to contain fossils. Additionally, if there are known paleontological resources the survey will verify the exact location of those resources, the condition or integrity of each resource, and the proximity of the resource to the Project Area.

For archaeological resources, the purpose is to verify the exact location of each identified resource, the condition or integrity of the resource, and the proximity of the resource to areas of cultural resources sensitivity, if any. The surveyor searched for artifacts (e.g., flaked stone tools, tool-making debris, stone milling tools or fire-affected rock), soil discoloration that might indicate the presence of a cultural midden, soil depressions and features indicative of the former

presence of structures or buildings (e.g., postholes, foundations), or historic-era debris (e.g., metal, glass, ceramics).

RESULTS

Cogstone archaeologist and cross-trained paleontologist Sandy Duarte surveyed the Project Area on March 2, 2021. Due to the heavily developed Project Area, the pedestrian survey consisted of 10-meter wide transects. Ground visibility within the Project Area was very poor (less than 1 percent) due to hardscaping and landscaping (Figure 13). Where not landscaped, much of the area was covered in dry grass, weeds, bushes, eucalyptus trees, and California fan palm trees (Figure 14). The construction crew on site had excavated a pit measuring 40 feet in length by 20 feet wide by 15 feet deep (Figures 15 and 16). Two sediment strata were visible in the pit sidewalls. The upper (surface) stratum is approximately 2.5 to 3 feet of white to grey, silty to sandy, artificial fill material. This is underlain by reddish-brown silty sand with some gravels present that is consistent with the young alluvial fan deposits (unit 3) mapped by Campbell et al. (2014). No archaeological or paleontological resources were observed within the Project Area during the survey.

Figure 13. Southwest corner of Project Area, facing northeast

Figure 14. West end of Project Area, facing northwest

Figure 15. Excavated trench, facing north

Figure 16. Stratigraphy of north wall, facing north

Cogstone's Architectural Historian, Shannon Lopez, conducted a built environment survey of historic-aged resources within the Project Area on March 2, 2021. Haggai Mazler of KBHomes was onsite March 2, 2021 and informed Ms. Lopez and Mrs. Duarte that the Starlite Drive-In theater's concessions building, associated ancillary buildings, and one-story historic-age commercial building (2559 Chico Avenue) located on the southeast corner of the Project Area were recently demolished (approximately 1 to 2 weeks prior to Cogstone's field visit) and that a demolition permit had been obtained prior to the demolition. Cogstone photo-documented the demolished areas but little to no remains of the buildings were present. The demolished buildings are not documented or evaluated for their eligibility for listing in CRHR.

The remaining extant features of the Starlite Drive-In theater and the single-family residence at the northeast corner of the Project Area were surveyed and photo-documented.

STARLITE DRIVE-IN THEATER

The theater sign and main entrance/exit face west towards Rosemead Boulevard, with a secondary entrance/exit at the east end of the property at Chico Avenue. The drive-in is bound by Rosemead Boulevard to the west, Chico Avenue to the east, a residential and commercial area to the north, and a light industrial/commercial area to the south (Appendix E; E-1 to E-10). See Photo Key for the locations associated with Figures E-1 to E-10.

The most notable feature remaining on the property is the 30-foot tall Streamline Moderne/Googie style theater sign. The overall condition of the sign is fair to poor due to deterioration of materials and some missing features. The smaller, decorative illuminating stars are missing from both the south and north sign faces as is the "Drive-In" lettering. There is notable damage to the exterior wood board paneling of the sign's (likely original) tower (deteriorating paint, disjointed and broken wood boards). There are minor but notable signs of rust on the marquee's metal paneling. The wood board sheeting which makes up the skirt at the lower portion of the marquee is warped due to age and exposure. Despite the sign's condition, it still retains many of its original features and is a fine representation of 1950s art/architecture and history of American drive-ins (Appendix E; E-1 to E-3).

Two long driveways connecting to Rosemead Boulevard funnel guest to and from the fan-shaped parking area. Narrow concrete lined grass covered strips divide the flow of traffic on the property with guests entering the property from the southern driveway and exiting back onto Rosemead Boulevard using the northern driveway (Appendix E; E-4 and E-11)

A wood backboard is located at the western half of the fan-shaped parking area (Appendix E; E-5). A long strip of concrete runs parallel (north/south) to the backboard. At least six small concrete foundations with metal anchors are embedded in the concrete. The large asphalt parking area appeared in fair condition with a large section of missing and deteriorating asphalt (Appendix E; E-5, E-8, and E-9). Several large holes (the result of recent demolition and

excavation) have exposed layers of artificial fill and native sediments. The concessions stand and surrounding ancillary buildings were completely demolished just prior to Cogstone's field visit (Appendix E; E-7). A tall wooden privacy fence follows much of the theater boundary with three sliding wood-board access gates located on the northern boundary of the property (Appendix E-10).

2559 CHICO AVENUE (SINGLE FAMILY RESIDENCE)
Due to access limitations only portions of this residence could be documented at the time of Cogstone's field visit.

This one story, single family residence was constructed ca. 1948. Information regarding this property is limited. Per the Los Angeles County Office of the Assessor, this residence shares the same Assessor's Parcel Number (APN) as the Starlite Drive-In theater (2540 Rosemead Boulevard, built 1950). The residence has a low-pitched side gabled roof (covered in composition shingles) with a notable slope at the west elevation, giving it a Saltbox-esqe style. The footprint of the building is mostly rectangular. The style of the doors and windows could not be determined, as they were heavily obscured by metal security bars as well as access limitations. The main pedestrian door is elevated approximately two feet above ground level and is accessible by concrete steps with metal handrails. The primary door is located at the east façade and is flanked by one window to the north and one or two windows to the south. Two small windows are present on the north elevation with a louvered gable vent near the crest of the roof (Appendix E; E-12).

The west elevation has two large sliding windows, a small one-over-one single hung window and a secondary pedestrian door. Due to access limitations it was not clear if an additional window was present at the southern end of this elevation. A large wood framed shelter supported by multiple steel poles is adjacent but not attached to the west elevation. Two small windows and a louvered gable vent were present at the south elevation (Appendix E; E-13 and E-14).

IMPACT ANALYSIS

PALEONTOLOGICAL SENSITIVITY

A multilevel ranking system was developed by professional resource managers within the Bureau of Land Management (BLM) as a practical tool to assess the sensitivity of sediments for fossils. The Potential Fossil Yield Classification (PFYC) system (BLM 2016; Appendix F) has a multi-level scale based on demonstrated yield of fossils. The PFYC system provides additional guidance regarding assessment and management for different fossil yield rankings.

Fossil resources occur in geologic units (e.g., formations or members). The probability for finding significant fossils in a project area can be broadly predicted from previous records of fossils recovered from the geologic units present in and/or adjacent to the study area. The geological setting and the number of known fossil localities help determine the paleontological sensitivity according to PFYC criteria.

Sediments that are close to their basement rock source are typically coarse; those farther from the basement rock source are finer. The chance of fossils being preserved greatly increases once the average size of the sediment particles is reduced to 5 mm in diameter or less. Moreover, fossil preservation also greatly increases after natural burial in rivers, lakes, or oceans. Remains left on the ground surface become weathered by the sun or consumed by scavengers and bacterial activity, usually within 20 years or less. So the sands, silts, and clays of rivers, lakes, and oceans are the most likely sediments to contain fossils.

Using the PFYC system, geologic units are classified according to the relative abundance of vertebrate fossils or scientifically significant invertebrate or plant fossils and their sensitivity to adverse impacts within the known extent of the geological unit. Although significant localities may occasionally occur in a geologic unit, a few widely scattered important fossils or localities do not necessarily indicate a higher PFYC value; instead, the relative abundance of localities is intended to be the major determinant for the value assignment.

Artificial fill is assigned a very low potential for fossils (PFYC 1; Table 6). Impacts more than 20 feet below the original ground surface in the young alluvial fan deposits, unit 3, are assigned a moderate sensitivity (PFYC 3), while those less than 20 feet below the original ground surface are assigned a low sensitivity (PFYC 2).

Table 6. Paleontological sensitivity rankings of project units

	PFYC Ranking				
	5: Very High	**4: High**	**3: moderate**	**2: Low**	**1: Very Low**
artificial fill					X
young alluvial fan deposits, unit 3			more than 20 feet below surface	less than 20 feet below surface	

Rankings as per BLM 2016.

ARCHAEOLOGICAL SENSITIVITY

While the pedestrian survey and cultural records search did not identify prehistoric archaeological resources within or near the Project Area, the pit opened on site during the recent demolition shows that intact native young alluvium sediments are present at approximately two

to three feet below modern ground surface. This is also consistent with the results of the geotechnical for the Project Area (Liu and Swiatek 2020). Coupled with the positive SLF search result, the Project Area is assessed to have moderate sensitivity for buried prehistoric archaeological resources. Analysis of the cultural record search, pedestrian survey, historical USDA aerial photographs, and USGS topographic quadrangle maps indicate that the Project Area has a low sensitivity for significant buried historical archaeological features such as foundations or trash pits.

HISTORIC RESOURCE EVALUATION

Department of Parks and Recreation (DPR) 523 series forms were newly prepared for these resources and are located in Appendix G.

STARLITE DRIVE-IN THEATER

Significance: Theme: Drive-In Theater/ Post-war Car Culture

Period of Significance: 1950-1997

The Starlite Drive-In theater is associated with the Early/Mid-20th century Drive-In Theater period of American history which is intrinsically linked with Post-War American Car Culture. The Starlite was built during the first great wave of drive-in theaters following the end of World War II. The drive-in was an iconic experience for the average American family who could enjoy an outdoor film from the comfort of their own automobile. When the Starlite Drive-In theater first opened it was lauded as one of the largest drive-ins on the west coast with every "modern facility." Its illuminated sign was praised in a 1951 issue of the Boxoffice magazine as a fine example of an "attraction panel" to "catch the attention of patrons." Due to the demolition of the original projection screen in 1997 and the recent demolition of additional key features (the concessions stand and projection booth), the drive-in as a whole has lost a substantial degree of integrity of materials, workmanship, and design, and feeling. Therefore, as a whole, the Starlite Drive-In theater is recommended not eligible for listing in the CRHR under Criterion 1 due to a substantial loss of integrity. However, the Starlite Drive-In theater sign retains much of its integrity and association with its historic period of significance. The sign is a local icon to the community of South El Monte and its image is often used to represent an important landmark within the City. The Starlite Drive-In theater sign does meet the standards for listing in the CRHR and is recommended eligible for individual listing under Criterion 1 for its association with Drive-In Theater history in America.

The Starlite Drive-In theater does not appear to be associated with the lives of persons significant in our past; therefore, it is recommended not eligible for listing under CRHR Criterion 2.

The Starlite Drive-In theater is associated with the work of experienced and respected California architect J. Arthur Drielsma, whose name is credited for the design of at least 14 drive in movie theaters, the majority located in the State of California. Only two drive-ins designed by Mr. Drielsma remain, one of them being the Starlite Drive-In theater. Mr. Drielsma's design of the Starlite Drive-In theater incorporated key features and design from the original drive-in theater patented by Richard M. Hollingshead Jr. in 1932 (exhibited by the fan-shaped parking arrangement, vehicle ramp, and a single large projection screen). As the integrity of the drive-in has been negatively impacted to a substantial degree due to the demolition of the original projection screen in 1997 and the recent demolition of the concessions building and projection booth, the Starlite Drive-In theater as a whole is recommended not eligible for listing in the

CRHR under Criterion 3. However, the Starlite Drive-In theater sign retains much of its integrity and is a fine example of Streamline Modern/Googie style which was prevalent at the time of its conception. It is also an excellent representation of the artistic esthetic of 1950s America and of the surviving work of J. Arthur Drielsma. The sign meets the standards for listing in the CRHR due to its association with the architect J. Arthur Drielsma and Streamline Modern/Googie style. The Starlite Drive-In theater sign is recommended individually eligible for listing in the CRHR under Criterion 3.

The Starlite Drive-In theater has not yielded, nor has the potential to yield, information important to the prehistory or history of the local area, California, or the nation; therefore it is recommended not eligible for listing in the CRHR under Criterion 4.

Integrity
The Starlite Drive-In theater has lost substantial integrity with the demolition of the original projection screen, concessions stand, and projector room. Therefore, the Starlite Drive-In theater as a whole is recommended not eligible for listing in the CRHR. However, the drive-in theater's original sign is recommended individually eligible for listing in the CRHR despite the loss of some integrity of materials, workmanship, and design. The Starlite Drive-In theater sign represents a significant period of American history regarding Early/Mid-20th century drive-in movie theaters coupled with America's post-war car culture. The sign retains key features such as its Streamline Moderne free-flowing design (emulating the shape/form of late 1940s automobiles), Googie style starbursts, H Channel Lettering spelling "Starlite," changeable copy panels, corrugated metal clad towers (used to store the sign's lettering and other associated tools), corrugated metal skirts, and three matching corrugated metal support piers. Despite the loss of many of its illuminated stars and "Drive-In" lettering, the sign is still recognizable when compared to the 1949 and 1950 photographs and reflects much of its original look and feel.

2559 CHICO AVENUE (SINGLE FAMILY RESIDENCE)
Theme: Residential Development
Period of Significance: ca. 1948-1976

This building does not appear to be associated with events that have made a significant contribution to the broad patterns of National, State, or local history, therefore, this building is recommended not eligible for listing under CRHR Criterion 1.

This building does not appear to be associated with the lives of persons significant in our past, therefore, this building is recommended not eligible for listing under CRHR Criterion 2.

While the roof of the buildings has Saltbox-esque qualities, it is not an exemplary representation of this style, thus this building does not embody the distinctive characteristics of a type, period,

or method of construction, that represent the work of a master, or possess high artistic values, therefore, this building is recommended not eligible for listing under CRHR Criterion 3.

The construction of this residence may predate modern trash services; however, there is a low possibility of significant subsurface deposits. Therefore, this building is recommended not eligible for listing in CRHR Criterion 4.

Integrity: This residence appears to retain its integrity of workmanship, materials, design, location, and association. Due to past development with the addition of commercial buildings, the construction of the Starlite Drive-In theater wood fence, and demolition of nearby ancillary and residential buildings, this property has lost a substantial degree of its original feeling and setting.

Due to a lack of significance the single family residence at 2559 Chico Avenue is recommended not eligible for listing on the CRHR.

CONCLUSIONS AND RECOMMENDATIONS

PALEONTOLOGY RECOMMENDATIONS

The Project Area is mapped entirely as late Pleistocene to Holocene young alluvial fan deposits (unit 3). The record search revealed no fossil localities from within the Project Area or immediate vicinity; however, localities are recorded near the Project from the same sediments as those found within the study area.

The paleontological records search revealed that all of the fossils previously recovered within a 12-mile radius of the Project were a minimum of 5 feet deep, occurring in deposits mapped as Pleistocene alluvium at the surface. Sediments with a Holocene component such as those of the study area produced fossils starting at 24 feet deep near to the Project Area. As such, the late Pleistocene to Holocene young alluvial fan sediments less than 20 feet below the modern surface are assigned a low potential for fossils (PFYC 2) due to the lack of fossils in these deposits. More than 20 feet below the modern surface, these sediments are assigned a moderate potential for fossils (PFYC 3) due to similar deposits producing fossils at that depth near to the study area.

Based upon records of fossils found in similar sediments nearby, no paleontological monitoring is currently recommended for the mass excavations. Drilling or pile driving activities, regardless of depth, have a low potential to produce fossils meeting significance criteria, because any fossils brought up by the auger during drilling will not have information about formation, depth or

context. The only instance in which such fossils will meet significance criteria is if the fossil is a species new to the region.

If unanticipated fossil discoveries are made, all work must halt within 50 feet until a qualified paleontologist can evaluate the find. Work may resume immediately outside of the 50-foot radius.

ARCHAEOLOGICAL RECOMMENDATIONS

While no archaeological resources were identified within the Project Area during the intensive pedestrian survey or during any previous investigations, native alluvium sediments are present starting at 2 to 3 feet below modern ground surface. As a result of this, and the positive SLF search result, a Worker Environmental Awareness Program (WEAP) training program is recommended. The WEAP training should be developed to inform construction personnel of cultural resources that may be encountered during construction. It is also recommended that a qualified archaeologist be retained to conduct spotchecks of excavations below 2 feet in depth.

In the event of an unanticipated discovery, all work must be suspended within 50 feet of the find until a qualified archaeologist evaluates it. In the unlikely event that human remains are encountered during project development, all work must cease near the find immediately.

In accordance with California Health and Safety Code Section 7050.5, the County Coroner must be notified if potentially human bone is discovered. The Coroner will then determine within two working days of being notified if the remains are subject to his or her authority. If the Coroner recognizes the remains to be Native American, he or she shall contact the Native American Heritage Commission (NAHC) by phone within 24 hours, in accordance with Public Resources Code Section 5097.98. The NAHC will then designate a Most Likely Descendant (MLD) with respect to the human remains. The MLD then has the opportunity to recommend to the property owner or the person responsible for the excavation work means for treating or disposing, with appropriate dignity, the human remains and associated grave goods. Work may not resume in the vicinity of the find until all requirements of the health and safety code have been met.

HISTORIC BUILT ENVIRONMENT RECOMMENDATIONS

The Starlite Drive-In theater sign (constructed in 1950) is recommended eligible for individual listing on the CRHR under Criteria 1 and 3. The sign is important for its historical association with drive-in movie theaters and car culture in the United States. It is also an excellent example of a Streamline Modern/Googie style theater sign and work of an important architect, J. (Jonas) Arthur Drielsma. The sign is a key element of the Starlite Drive-In theater; the theater as a whole has lost integrity due to demolition of important features, but the sign remains significant in its own right as a freestanding historic resource and retains much of its integrity.

It is Cogstone's understanding that there is an interest in restoring the Starlite Drive-In theater's sign to its original condition with a possibility for incorporation into future development of the Project Area. The sign may be moved a short distance within the Project Area so long as it continues to face Rosemead Boulevard, therefore, its relationship to the street will remain the same. Upon review of potential building plans for the Project Area, the majority of the new buildings will be set back away from the sign and located within the drive-in's parking lot. With Cogstone's recommendation of historical significance and eligibility for listing, we strongly encourage the restoration or rehabilitation of this resource following the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, & Reconstructing Historic Building*.

2559 Chico Avenue (Single Family Residence); due to a lack of significance the single family residence at 2559 Chico Avenue is recommended not eligible for listing on the CRHR.

APPENDIX A. QUALIFICATIONS

MOLLY VALASIK
QA/QC

EDUCATION

2009 M.A., Anthropology, Kent State University, Kent, Ohio
2006 B.A., Anthropology, Ohio State University, Columbus, Ohio

SUMMARY QUALIFICATIONS

Ms. Valasik is a Registered Professional Archaeologist (RPA) with more than 12 years of experience. She is a skilled professional who is well-versed in the compliance procedures of CEQA and Section 106 of the NHPA and regularly prepares cultural resources assessment reports for a variety of federal, state, and local agencies throughout California. Ms. Valasik has managed a variety of projects at Cogstone in the water, transportation, energy, development, and federal sectors. She meets the qualifications required by the Secretary of the Interior's *Standards and Guidelines for Archaeology and Historic Preservation*. She is accepted as a principal investigator for prehistoric archaeology by the State Office of Historic Preservation's Information Centers.

SELECTED EXPERIENCE

Brea 265 Specific Plan, City of Brea, Orange County, CA. The objective of this study was to review and summarize available information regarding known paleontological, archaeological, and historical resources within the boundaries of the proposed Specific Plan. This study provided environmental documentation as required by CEQA. A Paleontological Resource Impact Mitigation Program and full-time monitoring was recommended. Due to the high sensitivity for subsurface archaeological resources, a cultural resources mitigation plan and monitoring was also recommended. Sub to Placeworks. Project Manager and Principal Investigator for Archaeology. 2018-2019

La Verne General Plan Update, City of La Verne, Los Angeles County, CA. Cogstone reviewed and summarized available information regarding known paleontological, archaeological, and historical resources within the boundaries of the City of La Verne to support an update of the City's General Plan. Cogstone conducted archaeological and paleontological record searches, extensive historical research at City Hall, a Sacred Lands File (SLF) search was requested from the Native American Heritage Commission (NAHC), and a general analysis of impacts of future projects within the city that may adversely affect paleontological, archaeological, or historic resources was provided along with mitigation recommendations. Sub to De Novo. Principal Investigator for Archaeology. 2018

Whittier Boulevard/Three Intersection Improvements, City of Whittier, Los Angeles County, CA. Cogstone conducted intensive-level cultural resources surveys and prepared technical studies for improvements proposed for three intersections at Colima Road, Santa Fe Springs Road and Painter Avenue in a disturbed urban environment. Managed records search, Sacred Lands search, NAHC consultation, and APE mapping. Sub to Michael Baker. Principal Investigator. 2016-2018

Reseda Skate Facility Project, City of Los Angeles, Los Angeles County, CA. Cogstone was retained to conduct an archaeological assessment to determine the potential effects to archaeological resources resulting from construction of an ice rink, roller rink, and associated parking lot. Services included a records search, intensive-level pedestrian survey, and archaeological assessment report that determined the potential of disturbance to archaeological resources was low. *This project was a task order from an on-call contract with Los Angeles Bureau of Engineering.* Sub to ICF. Principal Investigator. 2017

SR-138 Palmdale Boulevard, Caltrans District 8, City of Palmdale, Los Angeles County, CA. The project involved widening and modifying three southbound lanes on Sierra Highway to Avenue R at the railroad crossing. Conducted a cultural resources assessment to support the Project environmental documents (IS/MND) in compliance with NEPA and CEQA. Services for this Local Assistance Project, on behalf of the City, included records search, Sacred Lands File search, Tribal consultation, intensive-level field survey, finalization of the APE map in concurrence with Caltrans District 7, and preparation of an ASR technical report. Sub to Parsons. Principal Archaeologist. 2015-2016

JOHN GUST
<u>Principal Investigator for Archaeology and Task Manager</u>

EDUCATION

2016 Ph.D., Department of Anthropology, University of California, Riverside (UCR)
2011 M.A., Department of Anthropology, UCR
2007 M.A., Applied Geography, University of Colorado, Colorado Springs (UCCS)
2002 B.A., Department of Anthropology, minor in Geography/Environmental Studies, UCCS

SUMMARY QUALIFICATIONS

Dr. Gust is a Registered Professional Archaeologist (RPA) with over 9 years of experience in field archaeology. He meets the qualifications required by the Secretary of the Interior's *Standards and Guidelines for Archaeology and Historic Preservation* and his field expertise includes pedestrian surveys, excavation monitoring, resource recording, and historic artifact analysis. Dr. Gust has managed cultural assessments for over 20 cellular tower projects and multiple assessments for construction of commercial and residential structures. He has also managed cultural resources monitoring projects for both public and private sector clients. Dr. Gust is a member of the Society for California Archaeology, Society for American Archaeology, and the American Anthropological Association.

SELECTED EXPERIENCE

Dogwood Road Project, City of El Centro, Imperial County, CA. Cogstone conducted a cultural resources assessment to determine the potential effects to cultural resources resulting from the construction of United States Department of Agriculture (USDA) Part 70-B RD Funding assisted housing on a 2.2-acre parcel. Cogstone conducted a record search, pedestrian survey, and determined that no further cultural resources work was necessary. The assessment provided environmental documentation as required by Section 106 of the National Historic Preservation Act (NHPA) and the California Environmental Quality Act (CEQA). The City of El Centro acted as the lead agency. Sub to Partner Science & Engineering, Inc. Principal Investigator for Archaeology. 2019-2020

Euclid Fueling Station Project, City of Santa Ana, Orange County, CA. Cogstone conducted a cultural resources assessment to determine the potential impacts to cultural and paleontological resources during the construction of a convenience store, associated parking, gas station, and underground fuel storage tank. The assessment was conducted to meet the requirements of CEQA with the City of Santa Ana acting as lead agency. Cogstone conducted record searches, a Sacred Lands File Search, an intensive pedestrian survey, gave mitigation recommendations, and produced a report. Sub to Sagecrest Planning + Environmental. Principal Investigator for Archaeology. 2019

Jackson St HUD 58 EA Project, City of Riverside, Riverside County, CA. Cogstone conducted a cultural resources assessment to determine the potential effects to cultural resources resulting from the construction of United States Department of Housing and Urban Development (HUD) assisted housing on a 3.58-acre parcel. This assessment provided environmental documentation as required by Section 106 of the National Historic Preservation Act (NHPA). The City of Riverside was the lead agency. Cogstone conducted a records search, a Sacred Lands File Search, a pedestrian survey, and produced a report. Sub to Partner Science & Engineering. Principal Investigator for Archaeology and Report Author. 2019

Heathercliff Malibu Development Project, City of Malibu, Los Angeles County, CA. Cogstone conducted a study to determine the potential impacts to cultural resources resulting from the construction of a single residence bounded by Heathercliff Road to the southeast and the Pacific Coast Highway to the northwest. This study included all information required by the City of Malibu Archaeology Guidelines. Cogstone conducted a record search, Sacred Lands File Search, pedestrian survey, and produced an assessment. Sub to ACS Construction. Principal Investigator for Archaeology and Report Author. 2019

KIM SCOTT
Principal Investigator for Paleontology

EDUCATION

2013 M.S., Biology with a paleontology emphasis, California State University, San Bernardino
2000 B.S., Geology with paleontology emphasis, University of California, Los Angeles

SUMMARY QUALIFICATIONS

Ms. Scott has more than 25 years of experience in California paleontology. She is a sedimentary geologist and qualified paleontologist with extensive experience. She is a skilled professional who is well-versed in the compliance procedures of CEQA, NEPA, and the Paleontological Resources Preservation Act (PRPA). Ms. Scott regularly prepares reports for paleontological assessments, mitigation and monitoring plans and measures, and monitoring reports for a variety of federal, state, and local agencies throughout California. In addition, she has prepared paleontological resources reports for CEQA/ EIR compliance documents for Project-level and program-level Specific Plans, General Plans, Master Plans, and Zoning Amendments for mixed-use, residential, commercial and industrial developments. Ms. Scott serves as company safety officer.

SELECTED PROJECTS

Purple Line Extension (Westside Subway), Metro/FTA, Los Angeles, CA. The Project involves extension of the subway from Wilshire/Western to the VA Facility in Westwood for 9 miles. Cogstone prepared the supplemental Archaeology and Architectural History Reports and the cultural and paleontological sections of the FEIS/FEIR. Cogstone subsequently prepared the cultural and paleontological mitigation and monitoring plans for the entire Project. Currently providing monitoring and all other cultural and paleontological services for Section One of the Project. Paleontological Field and Lab Director, Report Co-author. 2011-present

Barren Ridge Transmission Line, Los Angeles Department of Water and Power (LADWP), Saugus to Mojave, Los Angeles and Kern Counties, CA. Over 75 miles of LADWP electrical lines were installed Angeles National Forest, BLM and private lands. Supervised paleontological monitoring and lab work and prepared a Paleontological Monitoring Report to CEQA, BLM, and PRPA standards. Sub to Aspen Environmental Group. Principal Paleontologist. 2015-present

City of La Verne General Plan, Los Angeles County, CA. The Project was for an update to the City's General Plan, a 5,446-acre area. Provided a Paleontological and Cultural Assessment Report for the City. Sub to De Novo Planning Group. Principal Paleontologist. 2018

Interstate 405 Paleontological Resources Mitigation Plan, Los Angeles and Orange Counties, CA. Improvements to a 6-miles of Interstate 405 (I-405) between State Route 73 and Interstate 605. Provided a Paleontological Mitigation and Monitoring Plan. Principal Paleontologist. Sub to OC 405 Partners. 2018

Little Tujunga Canyon Bridge, Angeles National Forest, Los Angeles County, CA. The Project was to replace the Little Tujunga Canyon Road Bridge along Little Tujunga Canyon Road. Provided a Paleontological Assessment Report. Sub to Michael Baker International. Principal Paleontologist. 2017

Park Place Extension Project, City of El Segundo, Los Angeles County, CA. The City proposed to extend Park Place from Allied Way to Nash Street with a railroad grade separation to implement a critical Project improving traffic and circulation in the Project Area. Provided a combined Paleontological Identification and Evaluation Report (PIR/PER). Sub to Michael Baker International. Principal Paleontologist. 2017

Coto de Caza EIR Subdivision, Coto de Caza, Orange County, CA. The project proposed the subdivision of an existing large estate for development of 28 new residential lots on approximately 50-57 acres of land. Proposed residential lots will be a minimum of one acre in size. Prepared a Paleontological Assessment Report. Contracted to Bill Lyon. Co-Principal Paleontologist/Report Co-author. 2015

SHANNON LOPEZ
Architectural Historian

EDUCATION

2018 M.A., History (with an emphasis in architecture), California State University, Fullerton
2012 B.A., History, Minor in Asian-Pacific Studies, California State University, Dominguez Hills

SUMMARY QUALIFICATIONS

Ms. Lopez is a qualified historian and she meets the *Secretary of the Interior's Standards and Guidelines for Architectural History*. Ms. Lopez is experienced in architectural history research and surveys along with photo documentation and recording of built environment resources for local and federal projects. She has extensive knowledge with Native American consultation, consultation with city and county historical societies, and analysis of primary and secondary sources. Additionally, she is an approved Reader at the Huntington Library by the Los Angeles Office of Historic Resources.

SELECTED EXPERIENCE

Irvine General Plan Update, Phase II, City of Irvine, Orange County, CA. Cogstone conducted a study to review and summarize available information regarding known paleontological, archaeological, and historical resources within the boundaries of the City of Irvine to support the Phase II update of the City's General Plan. A general analysis of impacts of future projects within the City of Irvine that may adversely affect paleontological, archaeological, or historic resources was provided along with mitigation recommendations. Sub to Placeworks. Architectural Historian. 2018-2019

2525 N. Main, City of Santa Ana, Orange County, CA. The project proposed demolition of existing buildings and the construction of a five-story multi-family residential apartment complex. Cogstone conducted a cultural and historic resources records search, a field visit to known historic homes and Santiago Park, evaluation of the historic resources, and produced a built environment report. Conducted research, evaluation and co-author. Architectural Historian. 2018

Purple Line Extension (Westside Subway) Crack Propagation Reassessment, City of Beverly Hills, Los Angeles County, CA. On behalf of METRO, Cogstone was approved to reassess the exterior façade of the old Porsche building located on Wilshire Boulevard. The purpose of this reassessment was to document and compare the cracks of the current building during construction of the underground subway with those recorded in a pre-construction survey. Architectural Monitor and Author. 2018

Desert Sage Wellness Center, City of Hemet, Riverside County, CA. Cogstone completed a National Register of Historic Places eligibility re-evaluation for a proposed historical ranching line camp on behalf of the California Area Office Indian Health Service. This study was performed pursuant to Section 110 of the National Historic Preservation Act. Services included an archaeological and architectural pedestrian survey, records search, update to DPR forms, public outreach, additional research, and reported updates to SHPO. Architectural Historian. 2018

3800 W. 6th Street Mixed-Used Development, Koreatown, Los Angeles County, CA. The project proposed to construct a 21-story mixed-use development with two levels of underground parking. Cogstone conducted a paleontological and cultural resources assessment. Tasks included records search, built environment survey, resource recording and technical report. Conducted built environment survey, recoded building, and conducted view shed impact analysis. Architectural Historian. 2018

Accelerated Charter Elementary School, Los Angeles Unified School District, City of Los Angeles, Los Angeles County, CA. The project involved the construction of a new facility on a 2.3-acre site in South Central Los Angeles. Cogstone conducted paleontological and cultural resources monitoring. Five new archaeological sites were defined and one building record was updated. Sub to Gafon. Assistant Architectural Historian. 2017

SANDY DUARTE
Archaeologist

EDUCATION

2002 B.A., Cultural Anthropology, University of California, Santa Barbara

TRAINING AND CERTIFICATIONS

HAZWOPER Certified - Certified American Red Cross CPR; Certified American Red Cross Standard First Aid
Applied Archaeology of Southern California, USDA Forest Service, San Bernardino National Forest
Railroad Security Certified

SUMMARY QUALIFICATIONS

Ms. Duarte is a paleontologist and archaeologist with over 18 years of experience in paleontological and archaeological monitoring, surveying, and excavation in southern California. Ms. Duarte has experience with Native American consultation as required by Section 106 of the National Historic Preservation Act (NHPA) and under Senate Bill 18 for the protection and management of cultural resources. Beginning in 2006, Ms. Duarte worked for the U.S. Forest Service in the Biology, Timber, and Geology Department as an archaeologist, including serving as a trained wild-land firefighter to preserve archaeological sites forest fires. Additional skills include paleontological identification, fossil preparation, artifact identification and preparation, and final report preparation.

SELECTED PROJECTS

Parkside Estates, City of Huntington Beach, Orange County, CA. The project consisted of an approximately 50-acre development. Services included monitoring during all excavations, identifying and collecting cultural artifacts, and Native American coordination with Juaneño and Gabrielino groups. LSA Associates. March 2016-September 2019

State Route 74 Improvements, Caltrans District 12, Orange County, CA. This project consisted of the widening of SR-74 and adding a shoulder lane. Duties included monitoring the installation of ESA fencing along culturally sensitive areas along SR-74 and widening of shoulder lane. LSA Associates. Archaeological Monitor. April-June 2018

Perris Gateway Commerce Center, City of Perris, San Bernardino County, CA. The proposed project included the demolition of existing uses at the project site and the construction and operation of a 380,000 square-foot high-cube warehouse to be constructed on 21.63 acres, 0.27 acres of which would be provided for purposes of street dedication, and the remainder of the site to be developed with 205,000 square feet of landscaping, 225 passenger vehicle parking stalls, 98 trailer parking stalls, and two detention basins. Conducted monitoring during all ground disturbing activities. Archaeological Monitor. March 2018

La Pata Avenue 1.8-mile Gap Closure and Camino del Rio Extension, Orange County Public Works, City of San Juan Capistrano, Orange County, CA. This project was a massive undertaking of 14.8 million cubic yards of earth material being removed. Duties included identifying and collecting groundstone artifacts in alluvium, and identifying and collecting fossils in bedrock. Ms. Duarte also prepared numerous pinniped fossils specimens with zip scribes. LSA Associates. Lead Archaeological Monitor. March 2014 - March 2017

Planning Area 40 East/East Rough Grading and Pipeline Trenching, Cities of Lake Forest and Irvine, Orange County, CA. LSA conducted paleontological resources monitoring for the rough grading of PA 40 East/East for the development of a new residential community. Ms. Duarte served as paleontological and archeological monitor during all earth-disturbing activities on site. LSA Associates. January-April 2016

On-Call Environmental Mitigation Program, OCTA, Orange County, CA. This project consisted of 6 open space properties and 11 restoration project areas selected for mitigation of impacts from the Measure M2 freeway program. Prior to any work taking place, each area had to have an environmental assessment to determine the presence of both historic and prehistoric resources. Duties included leading transects using ArcGIS on a smartphone and assisting in identifying and recording artifacts. LSA Associates. Lead Archaeological Monitor. March-June 2014

KELLY VREELAND
<u>Paleontology Supervisor</u>

EDUCATION

2014 M.S., Geology, California State University, Fullerton (CSUF)
2010 B.S., Geology, CSUF

SUMMARY OF QUALIFICATIONS

Ms. Vreeland is a Paleontologist with over 10 years of experience in field paleontology. Her field and laboratory experience includes fieldwork and research projects throughout California and Nevada, as well as conducting fieldwork and surficial geologic mapping in Montana. Ms. Vreeland has expertise in invertebrate paleontology and paleoecology. Ms. Vreeland is a member of the Geological Society of America, the Paleontological Society, the Society for Sedimentary Geology, and the Association for Women in Geoscience.

SELECTED EXPERIENCE

Jack Ranch Tract, unincorporated area of San Luis Obispo County, CA. Cogstone prepared a Paleontological Mitigation Plan (PMP) to propose effective mitigation of potential adverse impacts to paleontological resources resulting from proposed construction of 13 residential lots as well as a Conditional Use Permit to allow for a Major Agricultural Cluster project. Cogstone is providing archaeological and paleontological monitoring during construction for residential development of a 299-acre parcel. The County of San Luis Obispo is the lead agency for this project under the California Environmental Quality Act. Sub to Kirk Consulting. Paleontology Supervisor. 2020-*present*

Five Point Community Development - Various Projects, City of Irvine, Orange County, CA. LSA Associates conducted paleontological and archaeological resources monitoring for various Five Point Community Development projects in Irvine as well as preparation of environmental documents. Paleontologist. 2015-2020

Alameda Corridor East Grade Separation Projects, various cities, Los Angeles County, CA. LSA Associates conducted on-call paleontological resource monitoring for various railway grade separation projects and preparation of Paleontological Mitigation Plans. Paleontologist. 2019-2020

South Campus Student Housing Project, City of Sacramento, Sacramento County, CA. LSA Associates prepared a Paleontological Resources Monitoring and Mitigation Plan as well as developed and conducting a Workers Environmental Awareness Program (WEAP) training. The project involved construction and operation of student housing facilities for upper-division university students adjacent to the California State University, Sacramento campus. Paleontologist. 2020

American Kings Solar Project, Kings County, CA. LSA Associates prepared a Paleontological Analysis for the proposed construction, operation, maintenance, and decommissioning of an up to 128-megawatt alternating current photovoltaic solar power-generating facility. Paleontologist. 2019

Teresina Project, City of Lake Forest, Orange County, CA. LSA Associates conducted paleontological and archaeological resources monitoring during grading for the development of a new residential community. Upon completion of the project, a Paleontological Resources Monitoring Report was prepared. Paleontologist. 2018

NBC Universal Project, City of Los Angeles, Los Angeles County, CA. LSA Associated prepared and conducted Worker Environmental Awareness Program (WEAP) training for all personnel on the project, as well as archaeological and paleontological resource monitoring for additional developments and improvements to the NBC Universal lot and associated roads. Paleontologist. 2018-2020

LOGAN FREEBERG
GIS Supervisor

EDUCATION

2018 Geographic Information Systems (GIS) Certificate, California State University, Fullerton
2003 B.A., Anthropology, University of California, Santa Barbara

SUMMARY QUALIFICATIONS

Mr. Freeberg has over 18 years of professional experience in cultural resource management, and has extensive experience in field surveying, data recovery, monitoring, and excavation of archaeological and paleontological resources associated with land development projects in the private and public sectors. He has conducted all phases of archaeological work, including fieldwork, laboratory analysis, research, and reporting. Mr. Freeberg also has a strong grounding in conventional field and laboratory methods and is skilled in the use of ArcGIS.

SELECTED PROJECTS

Laguna Creek Trail and Bruceville Road Project, Caltrans District 3, City of Elk Grove, Sacramento County, CA. The City of Elk Grove, in cooperation with Caltrans, proposed multiple trail extensions and gap closures in effort to provide connecting links that would ultimately provide trail users with access to a vast system of trails, with connections to parks, schools, community centers, commercial retail and office areas, and transit facilities. Cogstone conducted pedestrian surveys, records search, and prepared an Archaeological Survey Report (ASR) and a Historic Property Survey Report (HPSR). Sub to Helix Environmental. GIS Technician. 2019

Roosevelt Park Regional Stormwater Capture Project, unincorporated area of Florence-Firestone, Los Angeles County, CA. Conducted cultural and paleontological monitoring during all ground disturbing activities in native sediments. This project included the construction of three diversion structures and pipelines. Sub to Environmental Advisors. GIS Technician. 2019

Goddard School Project, City of Chino Hills, San Bernardino County, CA. Cogstone produced a paleontological resources mitigation and monitoring program for a proposed 59,129 square foot development that would consist of a one-story, 10,587-square foot pre-school/daycare with nine classrooms, fenced play yards and play structures, and a parking lot with 40 stalls. Cogstone put forward mitigation measures that included monitoring for all ground-breaking activities, paleontological resource awareness training for construction personnel, and the completion of a final mitigation report. GIS Technician. 2019

Euclid Fueling Station Project, City of Santa Ana, Orange County, CA. This study was conducted to determine the potential impacts to archaeological and paleontological resources during construction activities for a proposed 7-Eleven gas station and convenience store. The proposed project entailed the construction of the convenience store, associated parking, gas station, and underground fuel storage tank. Planned vertical impacts included approximately three to four feet of fill removal over at least some of the site, a trench approximately eight feet deep for utilities, and approximately 12 feet for the new fuel storage tanks. Sub to Sagecrest Environmental. GIS Technician. 2019

Fresno West Area Specific Plan, City of Fresno, Fresno County, CA. The objective of this study was to review and summarize available information regarding known paleontological, archaeological, and historical resources within the boundaries of the City of Fresno's West Area Specific Plan. The purpose of the West Area Specific Plan is to implement and refine the City's vision for the West Area in order to guide future growth and development in the most northwest area of the City. Cogstone's services included record searches, mapping, and extensive background research. Sub to De Novo Planning. GIS Technician. 2019

Laguna Beach Fire Department Fire Breaks, City of Laguna Beach, Orange County, CA. This project included the areas adjacent to homes and businesses requiring vegetation removal to create new fire breaks. Conducted a pedestrian survey of the natural landscape and slopes located along the eastern and western sides of the SR-133 highway, south of El Toro Road to Pacific Coast Highway. Archaeological Monitor. 2019

Cogstone Resource Management
Attn: Logan Freeberg

re: Paleontological resources for the South El Monte Cottages Project (Cogstone #5217)

Dear Logan:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the South El Monte Cottages project area as outlined on the portion of the El Monte USGS topographic quadrangle map that you sent to me via e-mail on February 12, 2021. We do not have any fossil localities that lie directly within the proposed project area, but we do have fossil localities nearby from the same sedimentary deposits that occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County.

Locality Number	Location	Formation	Taxa	Depth
LACM VP 3363	W of Monterey Pass Road in Coyote Pass; E of the Long Beach Freeway & S of the N boundary of Section 32	Unknown Formation (Pleistocene; sand and silt)	Horse (*Equus*)	Unknown
LACM IP 20258	Brickyard, S Ferris Ave, Belvedere Gardens	Unknown Formation (Pleistocene)	Invertebrates (*Turitella*, Naticidae)	Unknown
LACM VP 7702	Intersection of 26th St and Atlantic Blvd, Bell Gardens	Unknown Formation (Pleistocene; silt)	Fish (*Gasterosteus*); Snake (Colubridae), Rodents (*Thomomys, Microtus*); Rabbit (*Sylvilagus*)	30 feet bgs
LACM VP 3347	11204 Bluefield; Whittier	La Habra Formation	Horse (*Equus*)	2 feet bgs

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

This records search covers only the records of the Natural History Museum of Los

Angeles County ("NHMLA"). It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

Alyssa Bell, Ph.D.
Natural History Museum of Los Angeles County

Los Angeles, CA. 90014

RE: Information Request for the Cultural Resources Assessment for the South El Monte Cottages Project, City of South El Monte, Los Angeles County, California.

To Whom It May Concern:

Cogstone Resource Management, Inc. (Cogstone) is conducting a cultural and paleontological resources assessment for the South El Monte Cottages Project (Project) located between Rosemead Boulevard and Chico Avenue in the City of South El Monte, Los Angeles County, California (Figures 1-3).

The Project involves the construction of 206 residential units that include 38 cottages (attached) and 168 detached units. The Project area (PA) was formerly used as a drive-in theatre (The Starlite Drive-In theatre) and is used for a swap meet. The PA is almost entirely hardscaped. The Starlite Drive-In (2540 Rosemead Blvd.) was opened in June of 1950 and was part of the first boom of drive-in theatres in the United States. The screen was demolished in 1997. There are two additional structures at the northeast and southeast corners of the PA. A single family residence is located at the northeast corner of the PA at 2559 Chico Ave (APN: 8102-037-024); built ca. 1949. The address of the commercial building at the southeast corner of the PA is also listed as 2559 Chico Ave. Per historic aerial photograph, it appears that the core of this building was originally an ancillary building to an early 1900's farmstead (now demolished) and is visible in a 1938 aerial photograph. Additions to this building have occurred throughout the decades.

We are contacting you because we would like to invite members of the Los Angeles Conservancy to provide input regarding the redevelopment of the Project area. We appreciate your providing any comments, issues, and/or concerns relating to the history of the Project area. We would greatly appreciate any information you can provide regarding the Starlite Drive-In, the residence, and commercial building within the PA; specifically previous ownership, architect, and associated builder. The drive-in theatre is of particular interest as it appears to be one of the last drive-in theatres in southern California. Please contact me at slopez@cogstone.com or at (714) 974-8300. Thank you for your attention to this matter.

Sincerely,

Hey Shannon,

Even without the concession stand/projection booth I think the sign should be retained as a historic resource. For future projects dealing with theaters I'd recommend you reach out to the Los Angeles Historic Theater Foundation if you haven't already. I'm not sure what their history has been with drive ins but I'm sure they know of advocacy organizations that are involved with them.

Best,
Erik

Subject: Re: Information Request for the Cultural Resources Assessment for the South El Monte Cottages Project, City of South El Monte, Los Angeles County

Hi Erik!

Hope you are well.

I just wanted to touch base about the Starlite Drive-In Theater consultation. I just wanted to let you know that things have changed regarding our request for information. I went out to survey the property today and I was surprised to see a construction crew out on the site and had demolished the Drive-In's concessions building within the last week or two. Claims of a gas leak.

With the concrete projection screen and now the original concessions building gone I don't believe there is enough integrity left for the Drive-in as a whole to be considered eligible for listing on the CRHR. However, our client has interest in restoring the original Starlite Drive-In marquee and adapting it for modern use. They also plan to move the sign approximately 30ish feet to the south but would continue to face Rosemead Blvd. The marquee is in rough shape and is missing its original star shaped lights (Please see attached photos). I am not aware of any examples of a theater marquee being recommended eligible for listing in the CRHR on its own especially one in this condition. I'm very much on the fence if I can recommend this individually eligible. I would appreciate the Conservancy's opinion on this matter.

Thank you again for your time and I look forward to hearing from you.

All the best,
Shannon Lopez

Subject: Information Request for the Cultural Resources Assessment for the South El Monte Cottages Project, City of South El Monte, Los Angeles County

Hi Erik!

This is Shannon Lopez with Cogstone Resource Management. I wanted to reach out and forward you a copy of our request for information regarding the South El Monte Cottages Project (please see attached). The main focus of the project is the Starlite Drive-In theater (opened in 1950). The projection screen was demolished in 1997 and the original marquee is almost complete. I would like to know what the Conservancy's opinion is regarding the Starlite's historical significance in relation to the area. There are about a half dozen historic in age drive-ins left in Southern California (that I am aware of) but I can't find any that are considered eligible for listing at the state or national level. It was built near the early years of the first drive-in theater boom in the US. If the projection screen was still present I would lean more towards recommending it eligible for the CRHR but at the moment I am a bit hesitant.

According to my research thus far it was designed by J.(Jonas) Arthur Drielsma. Drielsma is listed in the 1955/1956 American Institute of Architects and is credited for other Drive-In theater designs such as the Big Sky Drive-In Theater (1951); Whittier Drive-In Theater, (1952); L.A. Mirada Drive-In Theater, (1954); Edwards San Gabriel Drive-In Theater (1955), and Smith's Ranch Drive-In/ Clemon's Drive-In (1956).

I found a few mentions of Drielsma and the Starlite in issues of Boxoffice Magazine but nothing helpful outside of telling me who the the architect was and when the theater was first opened. I do know that the property has been used for swap meets for decades and is still used as a swap meet after the theater closed by 1997.

Any and all help you can provide would be very much appreciated.

Thank you so much for your time and I look forward to hearing from you.

All the best,
Shannon Lopez

Hi Shannon,

This is Rosa Peña, president of La Historia Historical Society.
I do not have specific information in regards to the Starlite Drive-In Theater at this time.

Would you be able to speak on the phone? If so, my number is 626 246 4631.

Please let me know,

Rosa Peña

Hello,

My name is Shannon Lopez with Cogstone Resource Management located in the City of Orange. I just wanted to reach out and ask if our request for information, sent via mail on February 18th, was received? Please see attached for PDF copy of request.

The project in question will impact the Starlite Drive-In Theater on 2540 Rosemead Blvd. in South El Monte. Any and all information you can provide regarding the Starlite Drive-In and the two additional structures located on the northeast and southeast corners of the Project area will be greatly appreciated. Questions, comments, and concerns regarding the project are also appreciated.

All the best,
Shannon Lopez

Dear Shannon,

We normally do not get involved with this as an association, but Personally I think I can assist. Are you able to send me some pictures of what you are trying to identify, and or we can speak on the phone? I am D. Edward Vogel, a Staff member of the association and I own the Bengies Drive-In Theatre in Baltimore, MD. You may email me at: DEDWARD@BENGIES.COM and my office number is 410 686-7400. You may also email me a phone contact for you.

This email ended up in the Junk folder and I just discovered it, sorry for the delay in the reply.
D.

COMMUNICATION FROM UDITOA WEB SITE

Name: Shannon Lopez
Email: slopez@cogstone.com
Message: Good Afternoon,My name is Shannon Lopez with Cogstone Resource Management, Inc. in the City of Orange. I am currently working on a Project for the Starlite Drive-In theater located at 2560 Rosemead Boulevard, South El Monte, CA. 91733. I am currently recommended the surviving movie sign as eligible for listing on the California Register of Historic Resources, however, I have a question regarding the utility of the large tower at the back of the sign. We believe it may have been used to block ambient light from the sign so it would not interfere with the movie screen behind it but we are not 100% certain. I would appreciate any suggestions or feedback the U.D.I.T.O.A. can provide so we may have a better understanding of this historic resource. Please feel free to contact me if you would like me to provide current photographs of the sign.Thank you very much for your time and I look forward to hearing from you. All the best,Shannon Lopez

Re: South El Monte Cottages Project, Los Angeles County

To Whom It May Concern:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were positive. Please contact the Gabrieleno Band of Mission Indians – Kizh Nation on the attached list for more information. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

APPENDIX F. PALEONTOLOGICAL SENSITIVITY RANKING CRITERIA

PFYC Description Summary (BLM 2016)	**PFYC Rank**
Very Low. The occurrence of significant fossils is non-existent or extremely rare. Includes igneous (excluding air-fall and reworked volcanic ash units), metamorphic, or Precambrian rocks. Assessment or mitigation of paleontological resources is usually unnecessary except in very rare or isolated circumstances that result in the unanticipated presence of fossils.	1
Low. Sedimentary geologic units that are unlikely to contain vertebrate or scientifically significant nonvertebrate fossils. Includes rock units less than 10,000 years old and sediments with significant physical and chemical changes (e.g., diagenetic alteration) which decrease the potential for fossil preservation. Assessment or mitigation of paleontological resources is not likely to be necessary.	2
Moderate. Units are known to contain vertebrate or scientifically significant nonvertebrate fossils, but these occurrences are widely scattered and/or of low abundance. Common invertebrate or plant fossils may be found and opportunities may exist for casual collecting. Paleontological mitigation strategies will be based on the nature of the proposed activity. Management considerations cover a broad range of options that may include record searches, pre-disturbance surveys, monitoring, mitigation, or avoidance. Surface-disturbing activities may require assessment by a qualified paleontologist to determine whether significant paleontological resources occur in the area of a proposed action, and whether the action could affect the paleontological resources.	3
High. Geologic units containing a high occurrence of significant fossils. Fossils must be abundant per locality. Vertebrates or scientifically significant invertebrate or plant fossils are known to occur and have been documented, but may vary in occurrence and predictability. Mitigation plans must consider the nature of the proposed disturbance, such as removal or penetration of protective surface alluvium or soils, potential for future accelerated erosion, or increased ease of access that could result in looting. Detailed field assessment is normally required and on-site monitoring or spot-checking may be necessary during land disturbing activities. In some cases avoidance of known paleontological resources may be necessary.	4
Very High. Highly fossiliferous geologic units that consistently and predictably produce vertebrate or scientifically significant invertebrate or plant fossils. Vertebrate fossils or scientifically significant invertebrate fossils are known or can reasonably be expected to occur in the impacted area. Paleontological resources are highly susceptible to adverse impacts from surface disturbing activities. Paleontological mitigation may be necessary before or during surface disturbing activities. The area should be assessed prior to land tenure adjustments. Pre-work surveys are usually needed and on-site monitoring may be necessary during land use activities. Avoidance or resource preservation through controlled access, designation of areas of avoidance, or special management designations should be considered.	5
Unknown. An assignment of “Unknown” may indicate the unit or area is poorly studied and field studies are needed to verify the presence or absence of paleontological resources. The unit may exhibit features or preservational conditions that suggest significant fossils could be present, but little information about the actual unit or area is known. Literature searches or consultation with professional colleagues may allow an unknown unit to be provisionally assigned to another Class, but the geological unit should be formally assigned to a Class after adequate survey and research is performed to make an informed determination.	U
Water or Ice. Typically used only for areas which have been covered thus preventing an examination of the underlying geology.	W, I

P3a. Description:
This one story, single family residence was constructed ca. 1948. Information regarding this property is limited. Per the Los Angeles County Office of the Assessor, this residence shares the same Assessor's Parcel Number (APN) as the Starlite Drive-In theater (2540 Rosemead Blvd., built 1950). The residence has a low-pitched side gabled roof (covered in composition shingles) with a notable slope at the west elevation, giving it a Saltbox-esque style. The footprint of the building is mostly rectangular. The style of the doors and windows could not be determined as they were heavily obscured by metal security bars as well as access limitations. The main pedestrian door is elevated approximately 2 feet above ground level and is accessible by concrete steps with metal handrails. The primary door is located at the east façade and is flanked by one window to the north and one or two windows to the south. Two small windows are present on the north elevation with a louvered gable vent near the crest of the roof. (See Continuation Sheet)

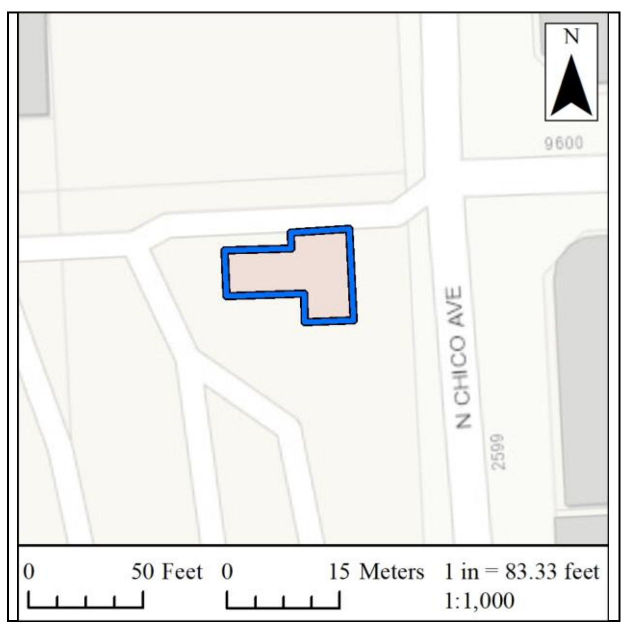
B1. Historic Name: None
B2. Common Name: None
B3. Original Use: Single family property **B4. Present Use:** Single family property
***B5. Architectural Style:** Saltbox elements
***B6. Construction History:**
Due to limitation of information the exact build date of this property is not known. The first image depicting this building is a 1948 USDA aerial photograph (NETROnline 1948). The existing residence appears to be in its current condition with two or three ancillary buildings south of the residence. By 1952, one of the large ancillary buildings immediately south of the residence is demolished (FrameFinder 1952). In 1958, it appears the large wood-frame shelter immediately west of the resident is present (FrameFinder 1958). The two remaining ancillary buildings from the previous 1949 aerial photograph are demolished by this time as well. By 1968, the previous wood shelter at the west elevation of the residence is replaced by the current (larger) wood framed structure. By 1968, the tall wood fence of the adjacent Starlite Drive-In theater is erected at the west and southern boundaries of the residence. There appears to be no notable changes to the residence or the property boundary with the exception of the large trees at the eastern boundary of the property (trees are first visible in 2005; (NETROnline 2005)). There is a small shed located southwest of the residence; however, the age of this shed or when it first appeared on the property is not known.

***B7. Moved?** ☒**No** ☐**Yes** ☐**Unknown** **Date:** **Original Location:** ***B8. Related Features:**



B9a. Architect: Unknown **b. Builder:** Unknown
***B10. Significance: Theme:** Residential Development **Area:** South El Monte
Period of Significance: ca. 1948-1976 **Property Type:** Single family property **Applicable Criteria:** N/A

This building is not appear to be associated with events that have made a significant contribution to the broad patterns of National, State, or local history, therefore, this building is recommended not eligible for listing under California Register of Historical Resources (CRHR) Criterion 1 or National Register of Historic Places (NRHP) Criterion A. This building does not appear to be associated with the lives of persons significant in our past, therefore, this building is recommended not eligible for listing under CRHR Criterion 2 or NRHP Criterion B. While the roof of the buildings has Saltbox-esque qualities, it is not an exemplary representation of this style, thus this building does not embody the distinctive characteristics of a type, period, or method of construction, that represent the work of a master, or possess high artistic values, therefore, this building is recommended not eligible for listing under CRHR Criterion 3 and NRHP Criterion C. The construction of this residence may predate modern trash services; however, there is a low possibility of significant subsurface deposits. Therefore, this building is recommended not eligible for listing in CRHR Criterion 4 or NRHP Criterion D.

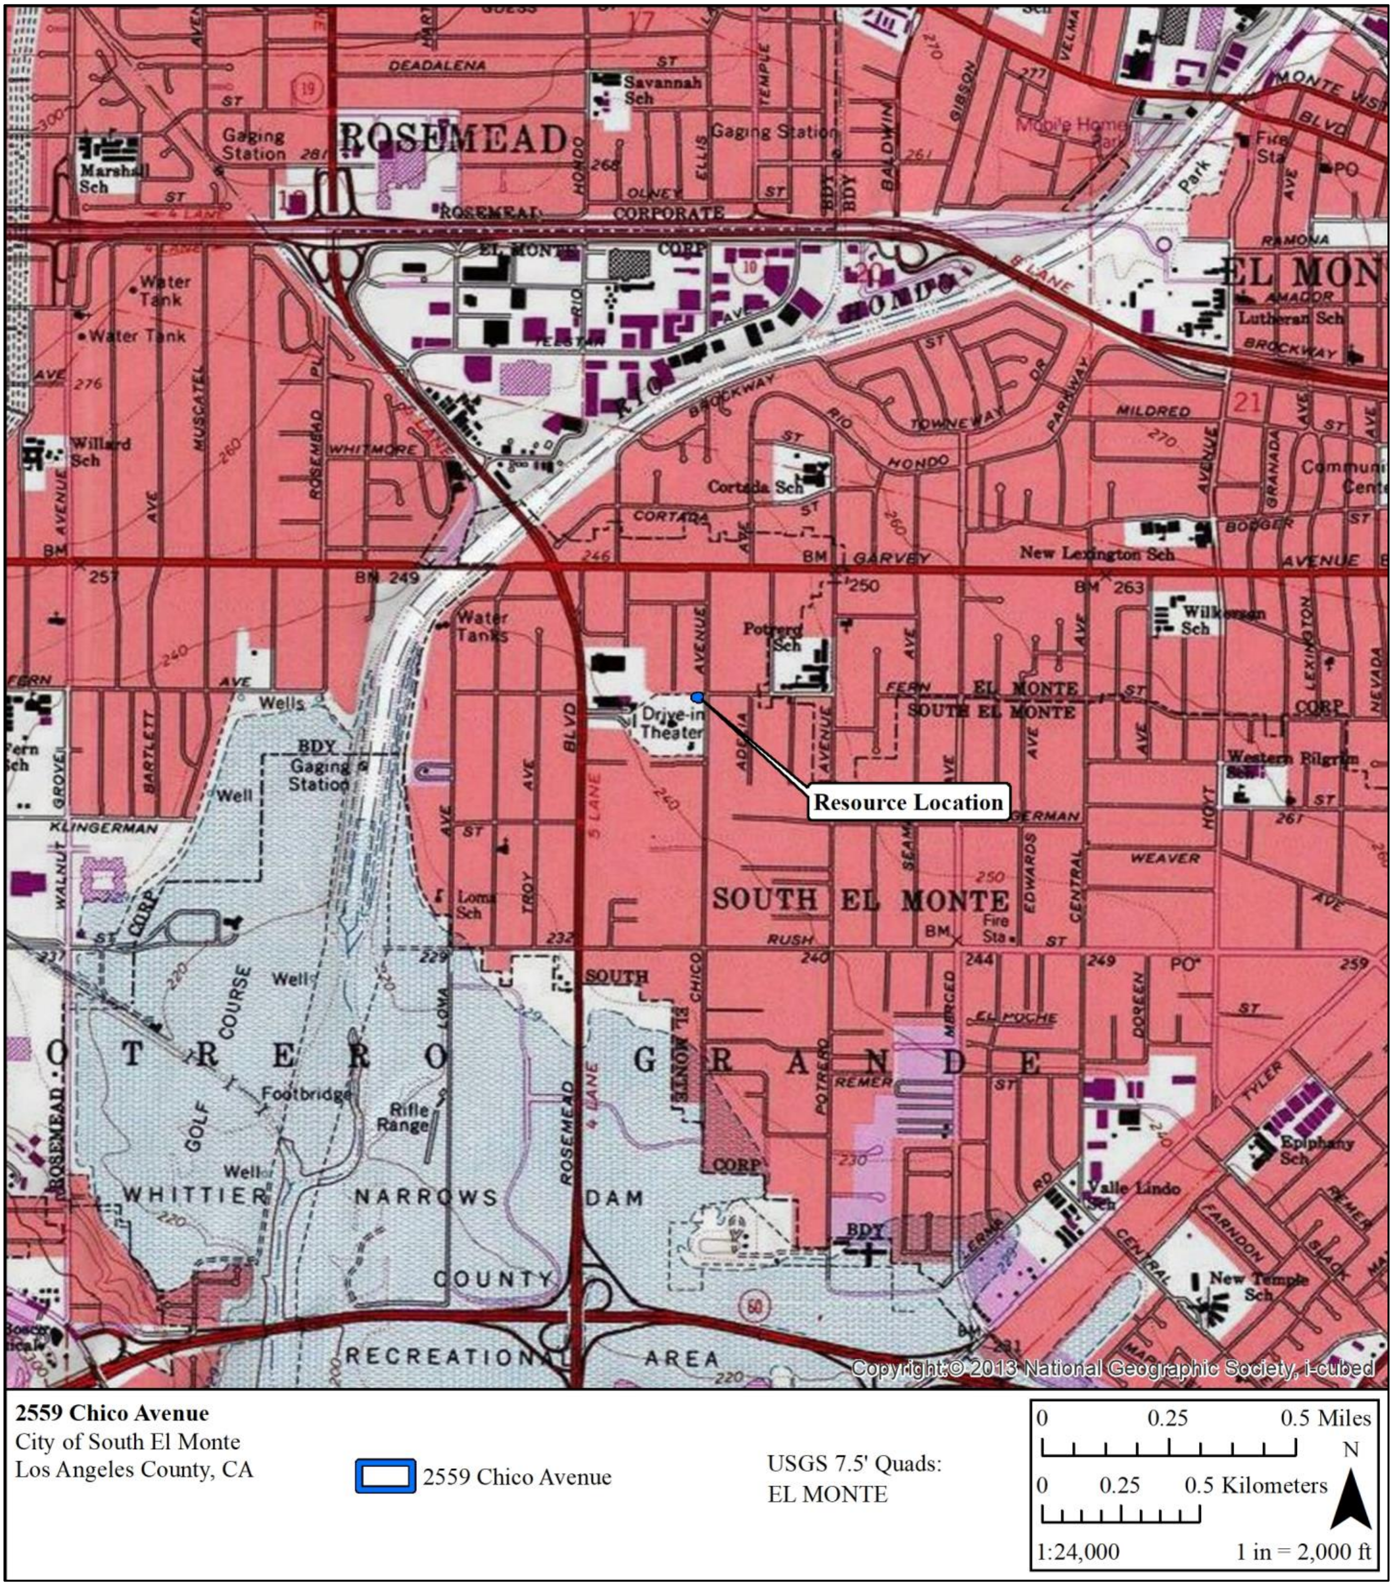
***B12. References:**
(See Continuation sheet)



B13. Remarks:

***B14. Evaluator:** Shannon Lopez
***Date of Evaluation:** March 15, 2021

 ***Resource Name or #:** 2559 Chico Ave. APN:8102-037-024 (Residence)

Map Name: El Monte ***Scale:** 1:24,000 ***Date of Map:** 1994

P3a. Description
At the west elevation are two large sliding windows, a small one-over-one single hung window and a secondary pedestrian door. Due to access limitations, it was not clear if an additional window was present at the southern end of this elevation. A large wood framed shelter supported by multiple steel poles is adjacent but not attached to the west elevation. Two small windows and a louvered gable vent were present at the south elevation.

***B10. Significance Cont.:**
Integrity: This residence appears to retain its integrity of workmanship, materials, design, location, and association. Due to past development with the addition of commercial buildings, the construction of the Starlite Drive-In theater wood fence, and demolition of nearby ancillary and residential buildings this property has lost a substantial degree of its original feeling and setting.

P3a. Description:
Designed by architect J. Arthur Drielsma, a specialist in drive-in theaters, this Streamline Moderne/Googie style drive-in opened on June 15, 1950 and remained in operation as a drive-in until the late 1990s. The facility currently includes its original sign, associated landscape features, and large, fan-shaped, parking lot (~900 car capacity). The original projection screen was demolished in 1997. As of late February/early March 2021, the concessions stand and projection booth have been demolished. The sign and main entrance/exit face west towards Rosemead Blvd., with a secondary entrance/exit at the east end of the property at Chico Ave. The drive-in is bound by Rosemead Blvd. to the west, Chico Ave. to the east, a residential and commercial area to the north, and a light industrial/commercial area to the south. The most notable feature remaining on the property is the 30-foot tall Streamline Moderne/Googie style sign. While the sign is in fair to poor condition due to age and some loss of materials, it still retains many of its original features and is a fine representation of 1950s art/architecture and history of American drive-ins.

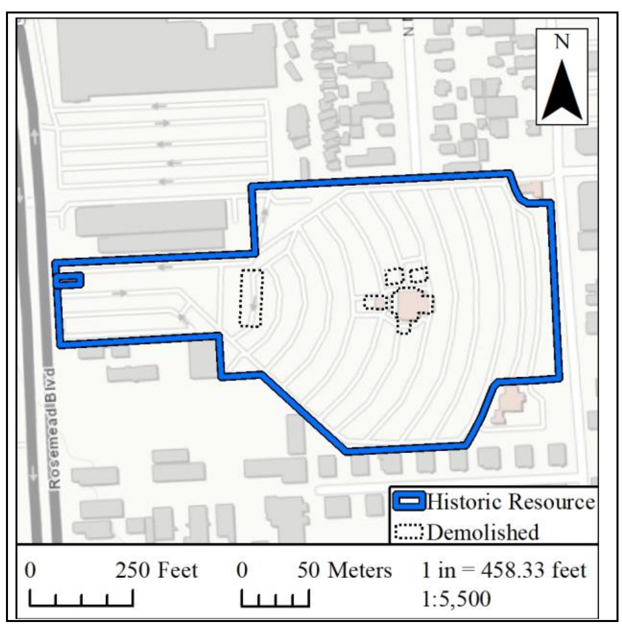
B1. Historic Name: Starlite Drive-In
B2. Common Name: Starlite Swap Meet
B3. Original Use: Drive-In movie theater **B4. Present Use:** Swap Meet lot/ Vacant
***B5. Architectural Style:** Streamline Moderne with Googie style elements
***B6. Construction History:**

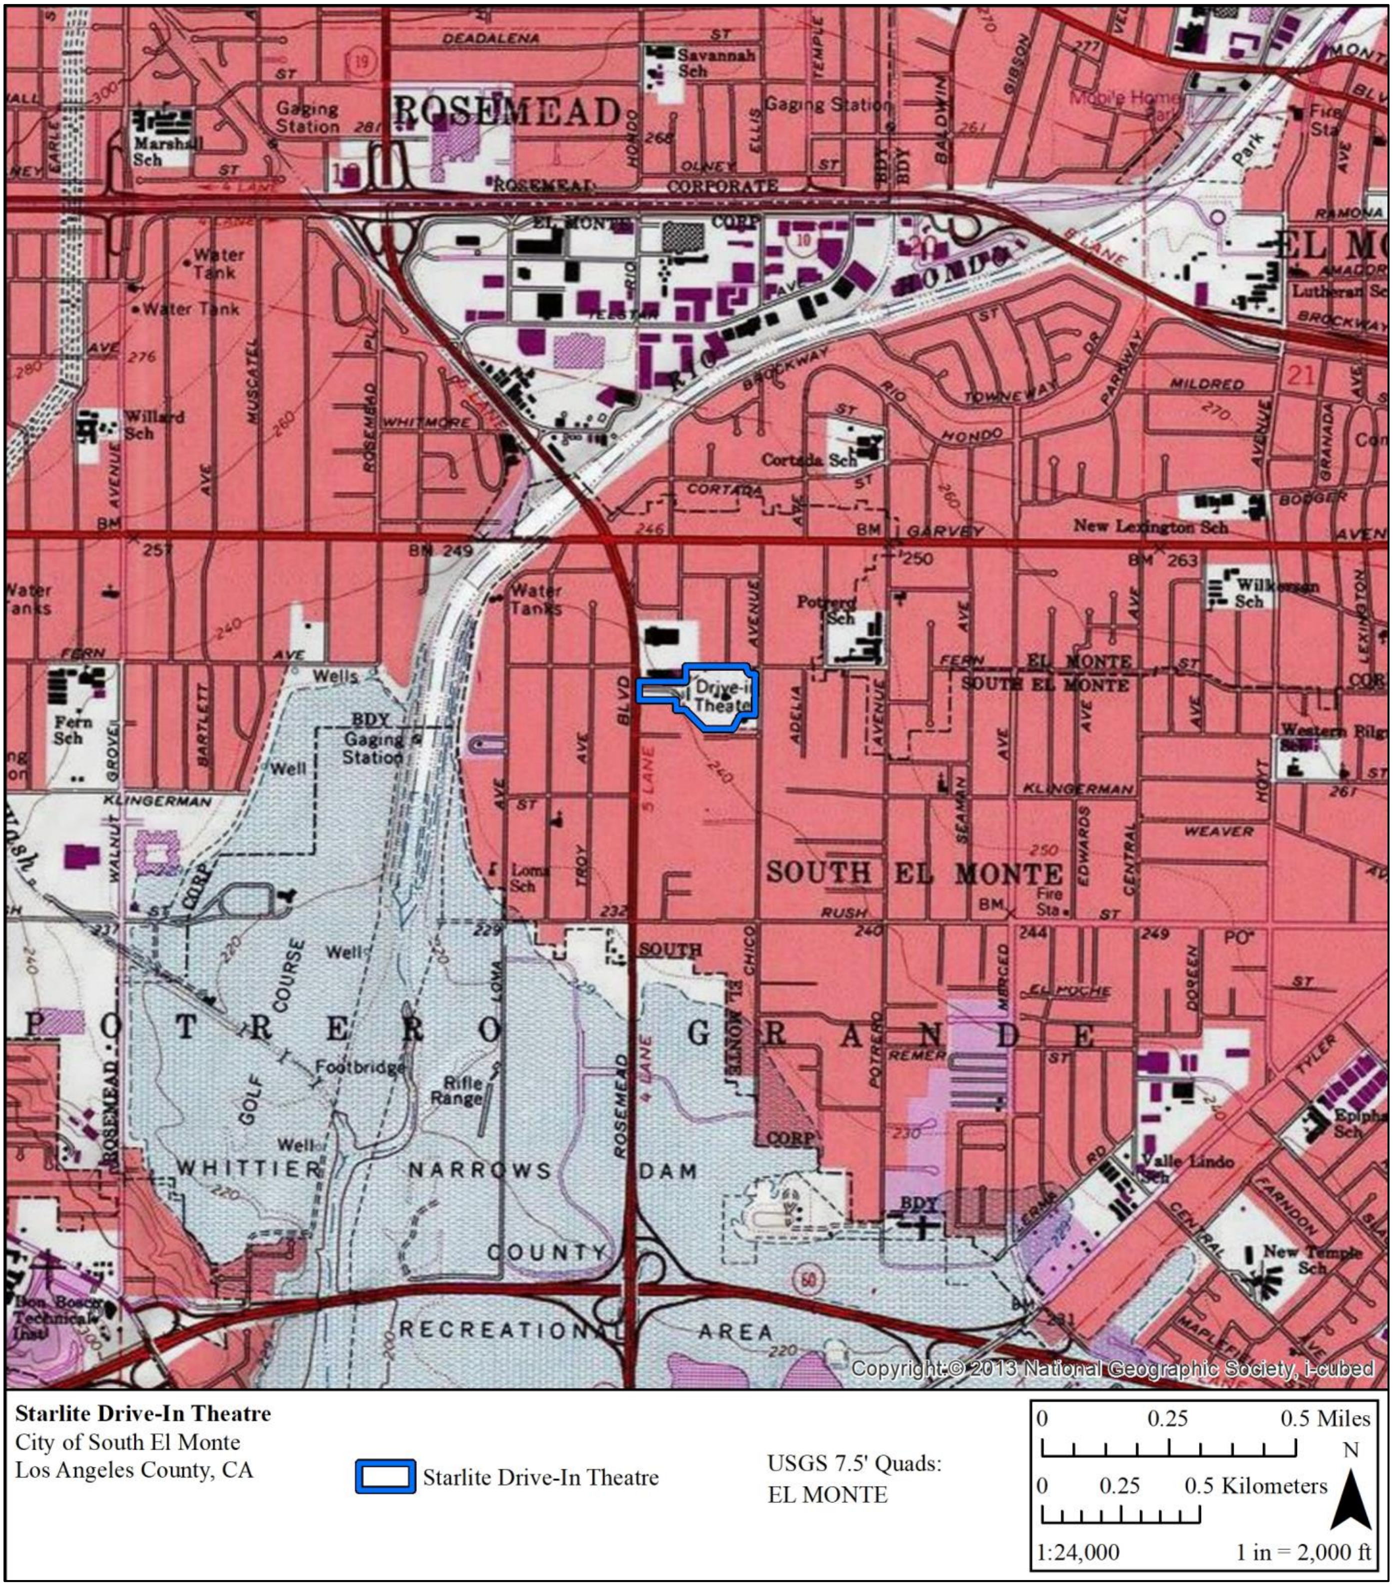
The Starlight Drive-In theater opened in South El Monte on June 14, 1950. The owners were veteran movie house owners Carl and Ford Bratcher. By 1951, operation of the facility was taken over by Pacific Theaters. Beginning in the 1950s, when not in use as a theater, the Starlite parking lot would host the local swap meet, now known as the Starlite Swap Meet (Guzman et al. 2020) (Renteria 2014). The original screen was demolished in 1997 and since then the grounds are used exclusively for swap meets. Despite the closure of the drive-in's original location, the Starlite Drive-In company still exists as a traveling pop-up theater complete with a large inflatable screen, projector, and high-grade FM transmitter (Maloney-Rames 2020). (See Continuation Sheet)



***B7. Moved?** ☒**No** ☐**Yes** ☐**Unknown** **Date:** **Original Location:**
***B8. Related Features:**
B9a. Architect: J. (Jonas) Arthur Drielsma **b. Builder:** Kennedy Engineering Company
***B10. Significance: Theme:** Drive-In Theater/ Post-war Car Culture **Area:** South El Monte, CA
Period of Significance: 1950-1997 **Property Type:** Theater **Applicable Criteria:** 1 and 3 (Sign only)

The Starlite Drive-In theater is associated with the Early/Mid-20th century Drive-In Theater period of American history which is intrinsically linked with Post-War American Car Culture. The Starlite was built during the first great wave of drive-in theaters following the end of World War II. The drive-in was an iconic experience for the average American family who could enjoy an outdoor film from the comfort of their own automobile. When the Starlite Drive-In first opened it was lauded as one of the largest drive-ins on the west coast with every "modern facility". Its illuminated sign was praised in a 1951 issue of the Boxoffice magazine as a fine example of an "attraction panel" to "catch the attention of patrons." Due to the demolition of the original projection screen in 1997 and the recent demolition of additional key features (the concessions stand and projection booth), the drive-in as a whole has lost a substantial degree of integrity of materials, workmanship, and design, and feeling. Therefore, as a whole the Starlite Drive-In is recommended not eligible for listing on either the National Register of Historic Places (NRHP) under Criterion A nor the California Register of Historic Resources (CRHR) under Criteria 1 due to a substantial loss of integrity. If the Starlite Drive-in retained its integrity of at least the concession stand and projection booth it would have been potentially eligible for listing in the CRHR under Criteria 1.. However, the Starlite Drive-In theater sign retains much of its integrity and association with its historic period of significance. The sign is also a local icon to the community of South El Monte and its image is often used to represent an important landmark within the city. While the sign does not rise to the level of NRHP eligibility is does meet the standards for listing in the CRHR. Therefore, the Starlite Drive-In sign is recommended eligible for individual listing in the CRHR under Criteria1 for its association with Drive-In Theater history in America. (Cont. on Continuation Sheet; page 6)

B11. Additional Resource Attributes:
***B12. References:**
(See Continuation Sheet)



B13. Remarks:

***B14. Evaluator:** Shannon Lopez
***Date of Evaluation:** March 12, 2021

 ***Resource Name or #:** Starlite Drive-In Theater

Map Name: El Monte ***Scale:** 1:24,000 ***Date of Map:** 1991

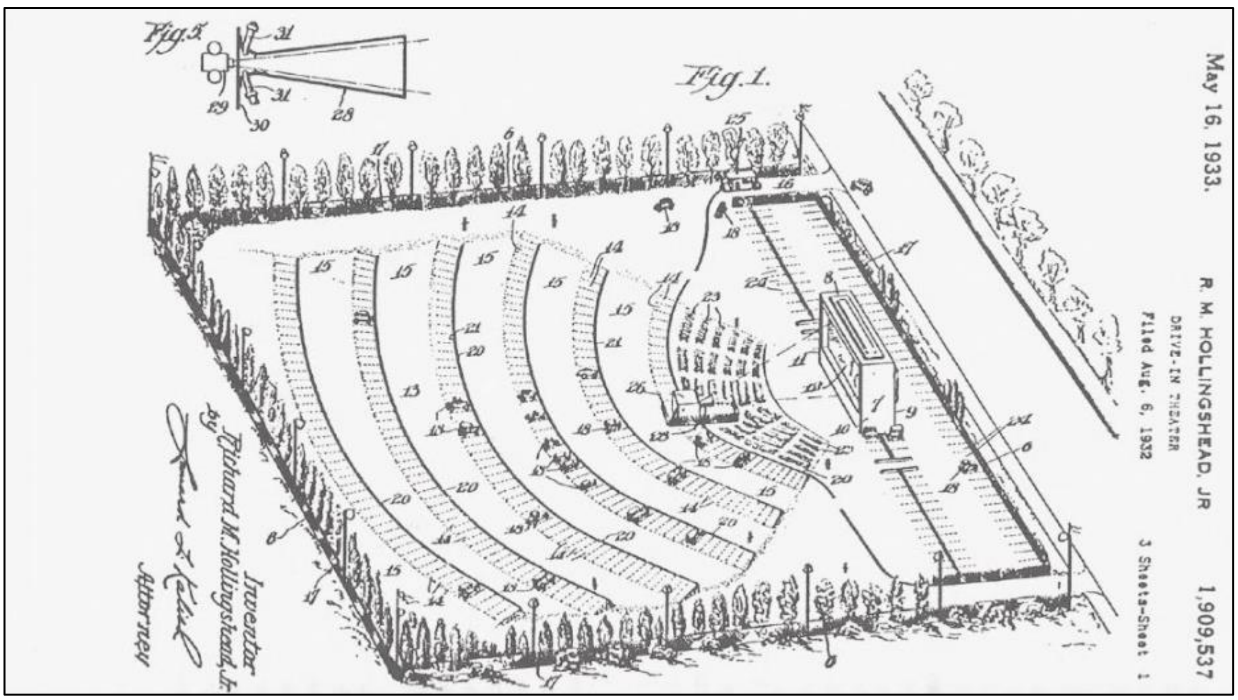
***B6. Construction History Cont.:**
The Starlite Drive-In was designed by J. Arthur Drielsma and originally operated by brothers Ford and Carl Bratcher and Byron Congdon (Boxoffice 1950). The theater was built by the Kennedy Engineering Company. According to the 1951 Boxoffice article "Merchandising the Drive-In," the marquee at the Starlite Drive-In was installed by the Los Angeles office of B. F. Shearer; the sign letters are associated with the Wagner brand (this brand is still manufactured today). The sign was described as a "dramatic arrangement" complete with "flashing stars" (Boxoffice 1951). It is unclear if the large corrugated metal tower is original to the sign or not; however, a 1952 historic aerial (FrameFinder 1952) clearly depicts the tower casting a shadow at this time. Therefore, the tower is historic in age and its construction is within the early years of the drive-in's period of significance, thus the tower is considered an important character defining feature of the sign as a whole.

J. Arthur Drielsma (March 1, 1902- April 15, 1981)
Mr. Drielsma attended the University of Illinois in 1923 and then the School of F.A., Fontainbebleau, France that same year. He worked as a draftsman for Schmidt, Garden & Erickson from 1924-1925, Ralph C. Harris in 1926, and the B. Leo. Steif in 1927. He worked for the firm Sobel & Drielsma sometime until 1946 when he founded his own private firm J. Arthur Drielsma. The 1955 American Architects Directory notes that Mr. Drielsma was a listed member of the American Institute of Architects (AIA), Pasadena Chapter. The majority of Mr. Drielsma body of work includes commercial and light industrial buildings such as:

- Fiesta Four Drive-In (1949)
- Magnolia Drive-In (1950)
- Starlite Drive-In (1950)
- South Lamont Drive-In (1950)
- Sunland Drive-In (1950)
- Big Sky Drive-In Theatre (1951)
- Whittier Drive-In Theatre, (1952)
- Citizens National Bank, (1953)
- L.A. Mirada Drive-In Theatre, (1954)
- Edwards San Gabriel Drive-In Theater, & Roger Young Auditorium Rest, (1955)
- San Gabriel Drive-In (1955)
- Sky View Drive-In (1955)
- Smith's Ranch Drive-In/ Clemon's Drive-In (1956)
- Lancaster Drive-In (1956)
- Kailua Drive-In (1965)

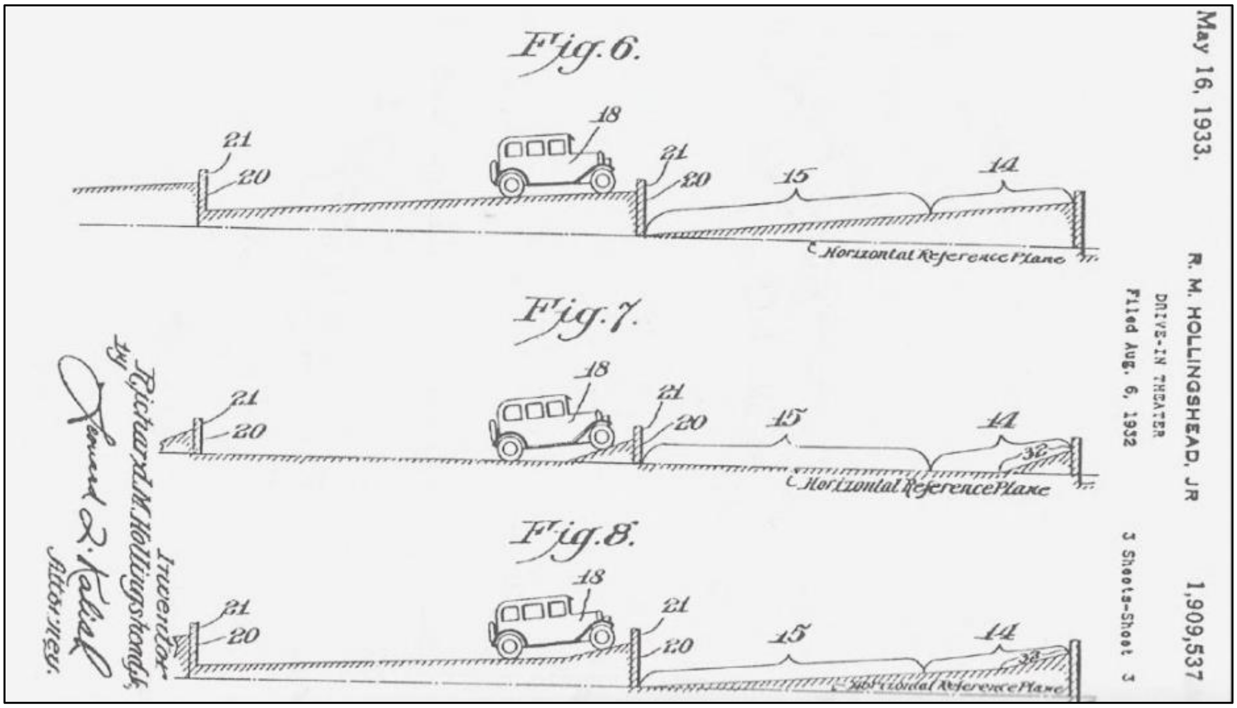
Including the Starlite Drive-In, Mr. Drielsma is responsible for the design of at least <u>fourteen</u> drive-in movie theatres, the majority located in the State of California. Only the Starlite Drive-In (South El Monte, CA) and the Smith's Ranch Drive-In/Clemon's Drive-In (Twentynine Palms, CA) are known to remain, however, only the Smith Ranch Drive-In remains in operation as a drive-in theatre (Koyl 1955; *Cinema Treasures* n.d.)

Drive-In Movie Theatres
The drive-in movie theatre is an iconic symbol of 20th century American culture. Described as part movie theatre and part theme park, the drive-in melded America's growing car culture with their love of cinema. The origin of the first drive-in theatre in the United States can be traced back to chemical company tycoon Richard M. Hollingshead Jr. in the early 1930s. At the time of the Great Depression, Hollingshead deduced that the automobile and the movies were considered essentials to the American people. After much experimentation, he found it possible to broadcast movie audio from speakers while projecting a movie from a 16-millimeter projector onto a sheet spread between two trees in his yard (Skrdla 2014).



On August 6, 1932, Hollingshead filed a patent (No. 1,909,537) for a drive-in theatre and on June 6, 1933, opened the first drive-in, in New Jersey on Admiral Wilson Boulevard between Camden and Philadelphia. Key features of the drive-in include a large parking area, concession stand, large outdoor movie screen, and a projection booth. However, despite his patent, it was relatively simple for others to replicate and open their own drive-ins, although initial progress was slow. For the first few years the development of additional theatres was sluggish due to the Depression era

economy and the issues of fine tuning the technology to improve quality of projection and audio performance (Skrdla 2014).



Upon the outbreak of World War II, drive-in construction came to a halt and would not continue until after 1945. During the postwar-era and the baby boom, drive-ins tripled from 100 locations pre-war to 300 by 1947. By 1950, an astounding rate of growth would reach 1,700 and climb to its peak (within the United States) to 3,700 locations by 1958 (Skrdla 2014).

To increase profits, drive-in owners endeavored to keep customers and their families on the property for as long as possible to encourage purchases at the concessions stand. Such attractions included playgrounds, petting zoos, picnic areas, etc. Mobil concessions carts would travel the lot offering food and beverages. Prior to dusk, activities such as beauty contests, dance competitions, and car rallies were also offered.

The 1950s and 1960s marked the height of drive-in popularity. The popularity of drive-ins was such that the film industry at the time evolved to produce films specifically tailored to outdoor viewing venues (*The Blob* 1958 and *Night of the Living Dead* 1968). However, with the growing popularity of home television and increasing gas prices, attendance experienced a substantial decline during the 1970s (Skrdla 2014).

Hollingshead's Drive-In patent (Skrdla 2014)

Hollingshead's ramp design (Skrdla 2014)

***B10. Significance Cont. (see page 2):**
Criteria of Eligibility Cont.
The Starlite Drive-In does not appear to be associated with the lives of persons significant in our past; therefore, it is recommended not eligible for listing under NRHP Criterion B or CRHR Criteria 2.

The Starlite Drive-In Theatre is associated with the work of experienced and respected California architect J. Arthur Drielsma, whose name is credited for the design of at least fourteen drive in movie theatres, the majority located in the State of California. Only two drive-ins design by Mr. Drielsma remain, one of them being the Starlite Drive-In. Mr. Drielsma's design of the Starlite Drive-In incorporated key features and design from the original drive-in theatre patented by Richard M. Hollingshead Jr. in 1932 (exhibited by the fan-shaped parking arrangement, vehicle ramp, and a single large projection screen). As the integrity of the drive-in has been negatively impacted to a substantial degree due to recent demolition, the Starlite Drive-In as a whole is recommended not eligible for listing in either the NRHP under Criteria C or the CRHR under Criterion 3. However, the Starlite Drive-In sign retains much of its integrity and is a fine example of Streamline Modern/Googie style which was prevalent at the time of its conception. It is also an excellent representation of the artistic esthetic of 1950s America and of the surviving work of J. Arthur Drielsma. While the sign does not rise to the level of NRHP eligibility it does meet the standards for listing in the CRHR. Therefore, due to its association with the architect J. Arthur Drielsma and Streamline Modern/Googie style, the Starlite Drive-In sign is recommended individually eligible for listing in the CRHR under Criteria 3.

The Starlite Drive-In has not yielded, nor has the potential to yield, information important to the prehistory or history of the local area, California, or the nation; therefore it is recommended not eligible for listing under neither the NRHP Criterion D nor the CRHR Criteria 4.

Integrity
The Starlite Drive-In Theatre has lost substantial integrity with the demolition of the original projection screen, concessions stand, and projector room. Therefore, the site as a whole is recommended not eligible for listing on either the National Register of Historic Places (NRHP) or the California Register of Historicical Resources (CRHR). However, the drive-in theatre's original sign is recommended individually eligible for listing in the CRHR despite the loss of some

integrity of materials, workmanship, and design. Per OHP guidance, the Starlite Drive-In sign represents a significant period of American history regarding Early/Mid-20th century drive-in movie theatres coupled with America's post-war car culture. The sign retains key features such as its Streamline Moderne free-flowing design (emulating the shape/form of late 1940s automobiles), Googie style starbursts, H Channel Lettering spelling "Starlite," changeable copy panels, corrugated metal clad towers, corrugated metal skirts, and three matching corrugated metal support piers. Despite the loss of many of its illuminated stars and "Drive-In" lettering, the sign as whole is still recognizable when compared to the 1949 and 1950 photographs.

Hit Films Will Open Sleek Drive-in Theater Tonight

EL MONTE—The big star on the Starlite Drive-in theater's 30-foot neon sign twinkles tonight for the first time.

With a car capacity of more than 900, the theater opens exactly four months after construction was started.

The first El Monte screening of John Ford's "Wagonmaster" will help make Starlite's grand opening a success. Ben Johnson and Joanne Dru are co-starred in the hit feature. The Bowery Boys will cavort in their latest comedy hit, "Lucky Loser," in the second feature.

The theater, covering nearly 15 acres at 2560 North Rosemead boulevard, is one of the largest drive-ins on the West Coast.

Two veteran movie house operators are the owners. Carl and Ford Bratcher, who formerly operated an indoor theater at Riverside, are running their first drive-in.

"The Starlite Drive-in will play the latest pictures from all major studios," says Ford. "It will oper te on a double feature policy, with regular drive-in theater prices and all children up to 12, accompanied by their parents, will be admitted free."

Kennedy Engineering Company of San Bernardino built Starlite, and although the job was done fast none of the latest drive-in facilities was overlooked.

Motorists will be pleased to know that Starlite has two entrances so that cars may enter either from the Rosemead side or from the rear on Chico street. The traffic flows through one main box office and space outside the main theater will park 500 cars.

Los Angeles architect J. Arthur Drielsma designed Starlite. Drielsma has supervised construction and designed many drive-ins in Southern California.

The most modern motiograph sound equipment has been installed at Starlite. The huge screen shines a "picture" 65x48 feet. A loud speaker system in the snack bar enables patrons to watch the films from there. Designed in robin's-egg blue, the snack bar is large and beautifully decorated.

As a final touch, a completely equipped playground for the children will be built in front of the screen.

La Grange Picnickers Will Gather Saturday

La Grange Association will hold its annual picnic Saturday, in Brookside Park. Members are asked to bring their own lunches; ice cream and coffee will be provided.

Starlite Sets Movie Contest

The largest number of 'phone calls ever received about any motion picture are currently keeping the staff busy at the Starlite Drive-In theater, Twentynine Palms, answering inquiries about "The Amazing Transparent Man" and MCP's "Million-Dollar Movie I. Q. Contest."

Theater manager Bill Underhill estimated today that he is receiving from five to 20 'phone calls per hour.

Theatergoers are eligible for 50,000 prizes which range from puppy dogs to mink coats.

The contest is scheduled for one week at the Starlite Drive-In, Feb. 24-March 1. The theater will pass out free official contest entry cards. Patrons may take them home, fill them out and mail them in. Judges are members of the famous Antelope Valley Woman's Club at Lancaster, members of the National Federation of Woman's clubs.

Appendix C-b Cultural and Paleontological Report Mitigation Measures

Appendix

This page intentionally left blank.

cogstone
PALEONTOLOGY - ARCHAEOLOGY - HISTORY

July 9, 2021 (revised) Cogstone 5217

To: Dina El Chammas Gass, PE
From: John Gust, PhD, RPA
Re: Mitigation Measures for the Cultural and Paleontological Resources Assessment for the Starlite Residential Project, City of South El Monte, Los Angeles County, California

This study was conducted to determine the potential impacts to cultural and paleontological resources during the Starlite Residential Project (Project) in the City of South El Monte (City; Figure 1), Los Angeles County, California.

As a result of this study, the Starlite Drive-In theater sign (constructed in 1950) is recommended eligible for individual listing on the California Register of Historic Resources (CRHR) under Criteria 1 and 3. The sign is important for its historical association with drive-in movie theaters and car culture in the United States. It is also an excellent example of a Streamline Modern/Googie style theater sign and work of an important architect, J. (Jonas) Arthur Drielsma. The sign is a key element of the Starlite Drive-In theater; the theater as a whole has lost integrity due to demolition of important features, but the sign remains significant in its own right as a freestanding historic resource and retains much of its integrity.

The following includes recommended mitigation measures intended to provide guidance for the future treatment of the Starlite Drive-In theater sign and cultural resources (archaeological) monitoring. These measures incorporate National Park Service U.S. Department of the Interior standards, local ordinances for the treatment of historic properties for the City of South El Monte, and requirements under the California Environmental Quality Act (CEQA).

Mitigation Measures

CUL-001: Prior to the beginning of ground disturbances, the project proponent shall retain an archaeologist meeting Secretary of the Interior Standards (SOI) to oversee spotcheck cultural resources monitoring of all excavations two feet and deeper within the project area. Spotchecks should occur weekly on average, and no less often than once every seven days that ground disturbance occurs. If a cultural object is uncovered the qualified monitor shall be empowered to temporarily redirect work away from the find while it is evaluated. Work can continue a minimum of 50 feet away from the find. For finds that are not significant, work may resume immediately after the find is documented and removed. If a find is significant, a mitigation plan must be developed, and mitigation completed, prior to work continuing within the 50-foot cordon.

CUL-002: Prior to the beginning of ground disturbances, the qualified monitor will give a short Worker Environmental Awareness Program training presentation prepared by the SOI qualified supervising archaeologist to all construction staff. This presentation will inform construction personnel what cultural

resources may be uncovered during the ground-disturbing phases of the project and what to do who to in case of a find.

CUL-003. Prior to any rehabilitation, restoration, or relocation, a thorough documentation of the sign, similar to a HABS/HAER report, will be completed. This report will document the sign's materials, design, character defining features, measurements, and condition of materials. This report will be used to track changes of the sign and provide a guide for future repair work. Copies will be submitted to one local and one state repository. Restoration, movement, and other handling of the Starlite Drive-In sign will be documented as an update to the Department of Parks and Recreation (DPR) record for the sign by the qualified architectural historian if restored, or similarly qualified personnel of the recipient organization if donated, and filed at the South Central Coastal Information Center and at a local library or historical society.

CUL-004: The project proponent shall preserve, restore, or rehabilitate the Starlite Drive-In sign, including all historic components, in accordance with the Secretary of the Interior standards based on guidance in NPS Technical Brief 25, The Preservation of Historic Signs https://www.nps.gov/tps/how-to-preserve/briefs/25-signs.htm. To this end, the proponent shall retain a qualified architectural historian to develop a treatment plan for the work detailing a general timeline, changes to be made to the sign, which tasks are anticipated to be completed off-site (e.g. welding, soldering, glasswork), and to oversee the work. Following approval of the HABS/HAER similar documentation, the qualified architectural historian will ensure that the materials are placed on file with the City of South El Monte and responsible agencies, historical societies and preservation groups, local university and community libraries, and other appropriate national and local repositories and archives, as identified by the City of South El Monte. The qualified architectural historian will prepare a brief report detailing the restoration process to show compliance with standards in NPS Bulletin 25.

CUL-005: The Starlite Drive-In sign may be moved a short distance, so long at it remains within the property boundaries of the drive-in and remains highly visible from Rosemead Boulevard. Alternatively, the sign may be donated to a local historical society for eventual restoration and display. In either case the sign shall be moved by a construction company experienced in handling historic building and structures. The move shall be supervised by the qualified architectural historian, in case of restoration, or recipient organization, in case of donation.

This mitigation measure pertains to movement of the sign from its current location to an eventual new final location. Temporary removal of portions of the sign for repair, refurbishment, or replication is anticipated to be necessary, and will be covered in the treatment plan.

Options

The following definitions for preservation, rehabilitation, restoration, and reconstruction of historic resources are provided by the National Park Service U.S. Department of the Interior.

Preservation is defined as the act or process of applying measures necessary to sustain the existing form, integrity, and materials of an historic property. Work, including preliminary measures to protect and stabilize the property, generally focuses upon the ongoing maintenance

and repair of historic materials and features rather than extensive replacement and new construction. New exterior additions are not within the scope of this treatment; however, the limited and sensitive upgrading of mechanical, electrical, and plumbing systems and other code-required work to make properties functional is appropriate within a preservation project.

Rehabilitation is defined as the act or process of making possible a compatible use for a property through repair, alterations, and additions while preserving those portions or features which convey its historical, cultural, or architectural values.

Restoration is defined as the act or process of accurately depicting the form, features, and character of a property as it appeared at a particular period of time by means of the removal of features from other periods in its history and reconstruction of missing features from the restoration period. The limited and sensitive upgrading of mechanical, electrical, and plumbing systems and other code-required work to make properties functional is appropriate within a restoration project.

Reconstruction is defined as the act or process of depicting, by means of new construction, the form, features, and detailing of a **non-surviving** [emphasis Cogstone] site, landscape, building, structure, or object for the purpose of replicating its appearance at a specific period of time and in its historic location.

Reconstruction is different from the other treatments in that it is undertaken when there are often no visible historic materials extant or only a foundation remains. Because of the potential for historical error in the absence of sound physical evidence, this treatment can be justified only rarely and, thus, is the least frequently undertaken of the four treatments.

Option 1

- Resource will remain *in situ*.
    - If the resource remains *in situ* it will retains its integrity of location.
- The owner, occupant, or other person in actual charge of the resource may implement either NPS U.S. Department of the Interior standards for Preservation, Rehabilitation, or Restoration.

Option 2

- Resource is moved within the property boundaries of the Starlite Drive-In Theater but will remain highly visible from Rosemead Blvd.
    - Moving the resource from its current location will result in a notable loss of integrity of location; however, if the resource remains highly visible and adjacent to Rosemead Blvd. then a total loss of location will be avoided as the original function of the sign was to advertise the Starlite Drive-In to passing motorists.
- The owner, occupant, or other person in actual charge of the resource may implement either NPS U.S. Department of the Interior standards for Preservation, Rehabilitation, or Restoration.

Option 3

Option 3 is recommended only as a last resort in the event that the current owner expresses no desire to maintain or otherwise preserve the Starlite Drive-In theater sign.

- The resource will be donated to a local historical society or agency as approved by the South El Monte Department of Community Development.
    - Moving the resource off of the property boundaries of the Starlite Drive-In theater will result in a total loss of the sign's integrity of location, setting, and association.
- The owner, occupant, or other person in actual charge of the resource may implement either NPS U.S. Department of the Interior standards for Preservation, Rehabilitation, or Restoration.

South El Monte Historic Preservation Ordinance (2011)

<u>17.78.060 Designation Criteria</u>

For the purpose of this chapter, an improvement may be designated a landmark by the city council, and any area within the city may be designated an historic district by the city as hereinafter provided if it meets the following criteria:

A. It exemplifies or reflects special elements of the city's cultural, social, economic, political, aesthetic, engineering, or architectural history; or
B. It is identified with persons or events significant in local, state, or national history; or
C. It embodies distinctive aesthetic characteristics of a style, type, period, or method of construction, or is a valuable aesthetic example of the use of indigenous materials or craftsmanship; or
D. It is representative of the notable aesthetic work of a builder, designer or architect. (Ord. 963§39(part), 1995; Ord. 822 §1(part), 1989)

<u>17.78.120 Maintenance and Repair</u>

A. Nothing in this chapter shall be construed to prevent the ordinary maintenance or repair of any exterior architectural feature in or on any property covered by this chapter that does not involve a change in design, material or external appearance thereof, nor does this chapter prevent the construction, reconstruction, alteration, restoration, demolition, or removal of any such feature when the building officer certifies to the commission that such action is required for the public safety due to an unsafe or dangerous condition which cannot be rectified through the use of the California Historical Building Code.

B. The owner, occupant or other person in actual charge of a designated landmark , or an improvement, building or structure in an historic district shall keep in good repair all of the exterior portions of such improvement, building or structure, all of the interior portions thereof when subject to control as specified in the designating ordinance or permit, and all interior portions thereof whose maintenance is necessary to prevent deterioration and decay of any exterior architectural feature.

C. It shall be the duty of the department of community development and the building official to enforce this section. Where the owner of a designated landmark has been ordered by the city to make necessary repairs, but has failed to do so, the city may make improvements necessary for the maintenance of the landmark and charge the cost of those repairs to the owner as a lien upon his property. (Ord. 963 §39(part), 1995; Ord. 822 §1(part), 1989)

Starlite Development
Traffic Impact Analysis
Draft Report

June 9 2021

Submitted to:

10045 | Prepared by **Iteris, Inc.**

TABLE OF CONTENTS

TABLES

FIGURES

1 INTRODUCTION

This report summarizes the results of a traffic analysis for the proposed Starlite Development housing project, hereinafter referred to as the ”project”, located at 2540 Rosemead Boulevard in the City of South El Monte. This report provides detailed information concerning the methodology, findings, and conclusions of the traffic analysis. Six (6) existing intersections in the vicinity of the project site were analyzed, in addition to two (2) intersections that will provide driveway access to the project site, for a total of eight (8) project intersections. This traffic analysis evaluates the effect of project trips on existing traffic conditions and on project opening year 2023 traffic conditions, taking into account growth in traffic due to other known development projects in the surrounding area as well as overall ambient growth in background traffic.

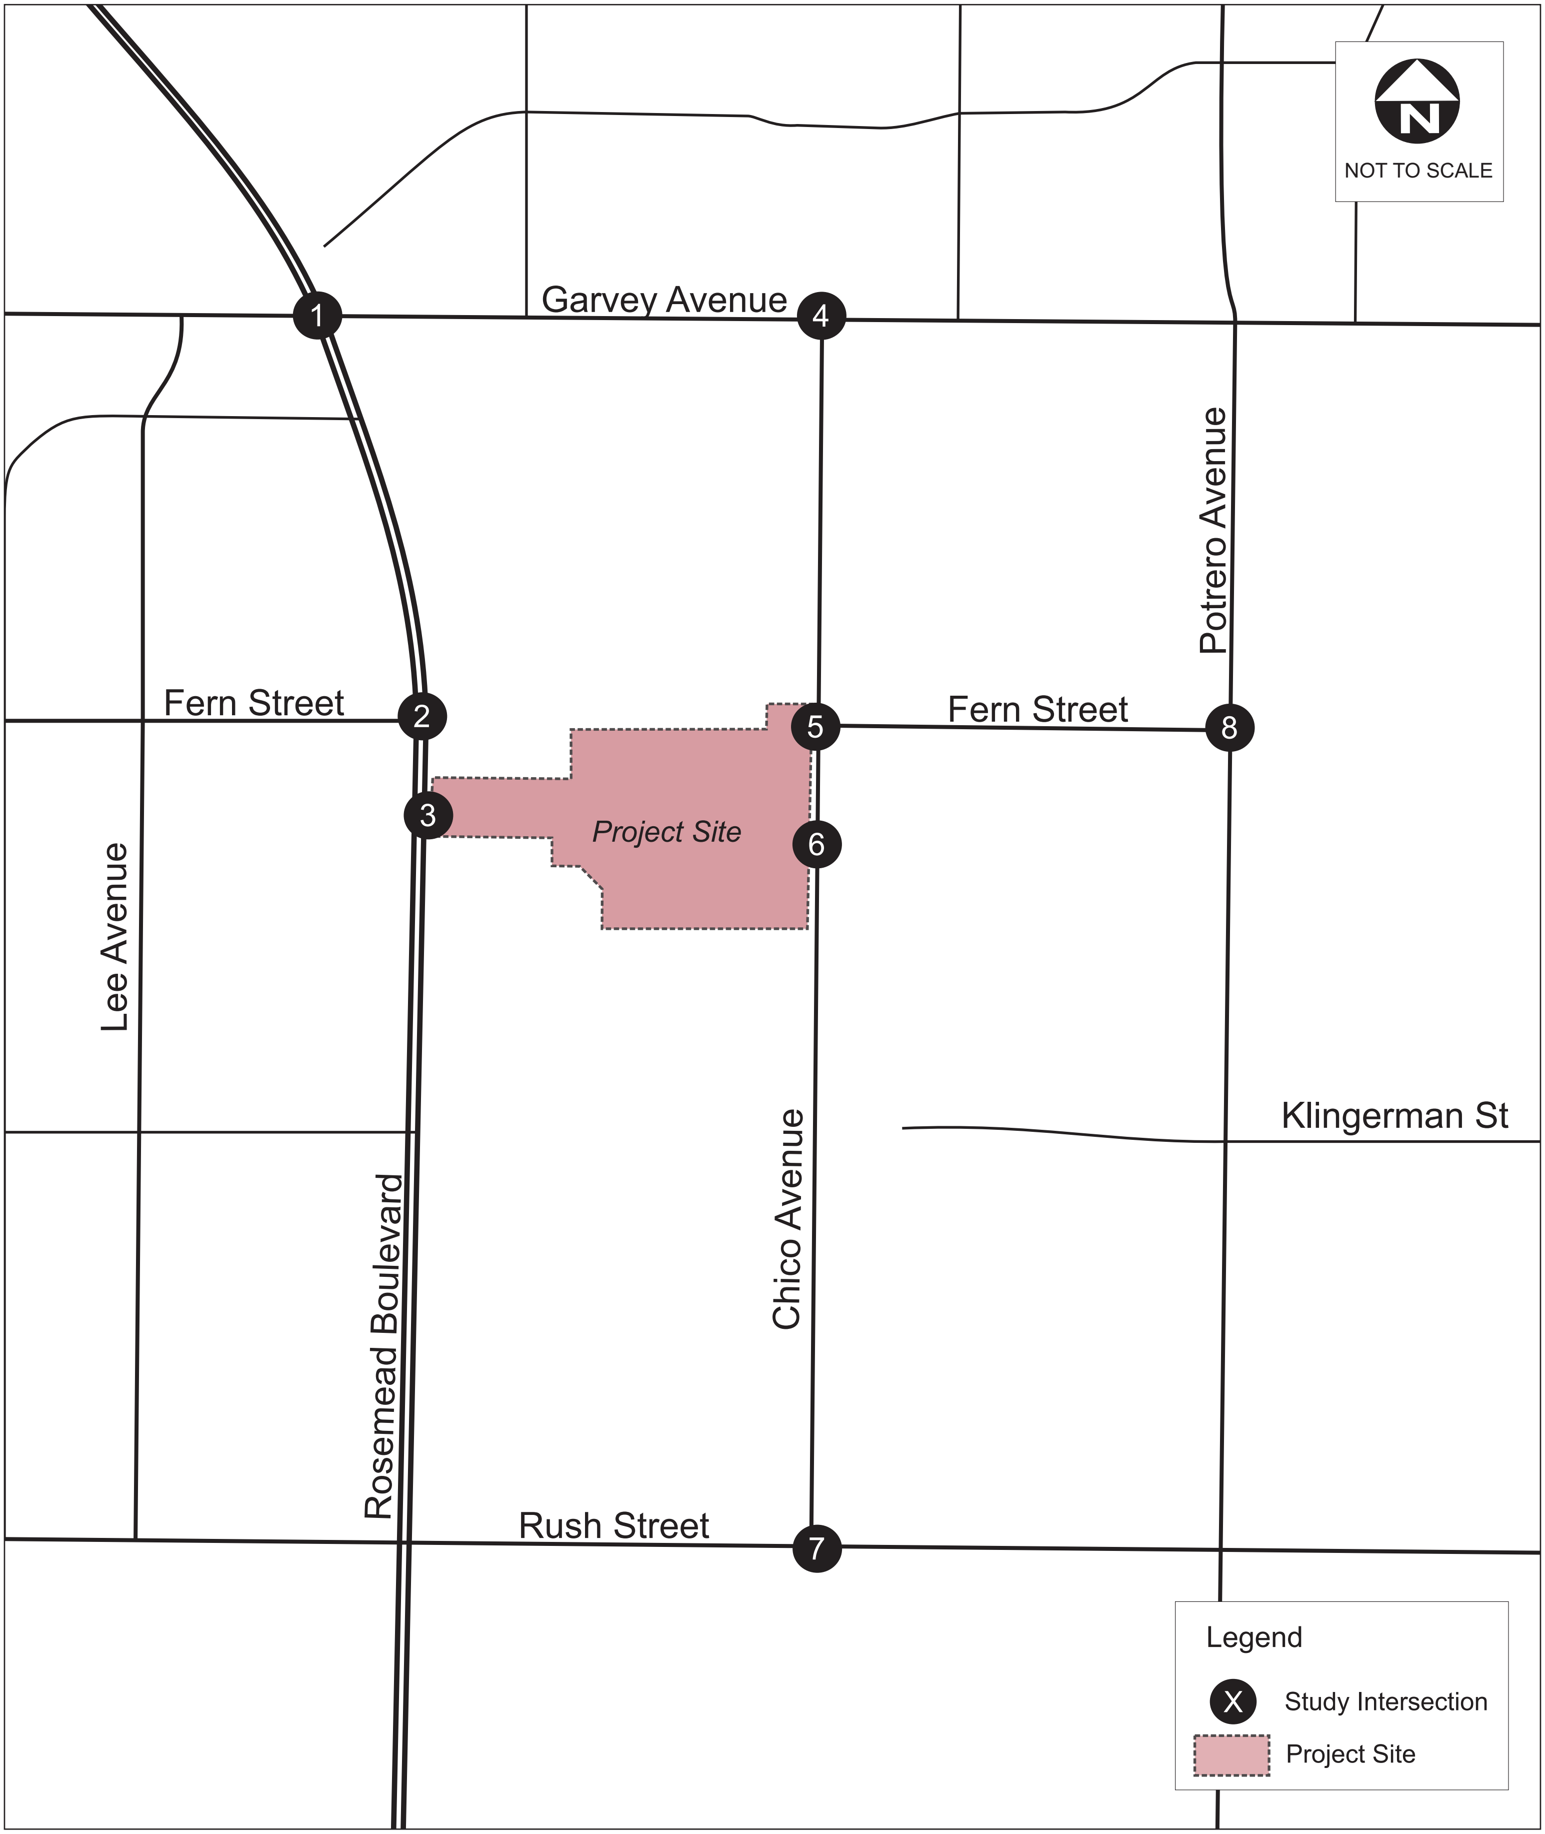
1.1 Project Description

The proposed project consists of a housing development containing a total of 207 housing units, with a mix of 38 multi-family housing units and 169 detached single-family housing units. The project site is currently a large asphalt lot with a minor structures and is occupied by the Rosemead Swap Meet, which itself occupies the grounds of the former Starlite Drive-In Theater. The Starlite Drive-In Theater sign on Rosemead Boulevard that now serves as a marquee for the Rosemead Swap Meet is planned to be preserved, rehabilitated, and used for the project.

Access to the project site will be provided at two locations, one an existing driveway on Rosemead Boulevard that currently provides access to the west, as well as a future driveway on Chico Avenue south of Fern Street that will provide access to the east. As stated by City staff, unless the project is going to petition the City for a cut in the median on Rosemead Boulevard, the west driveway will allow for only right turns into and out of the project site. However, the east driveway on Chico Avenue will allow right and left turns both into and out of the project site. **Figure 1** shows the project site plan.

1.2 Study Area

The proposed study area for analysis includes the following eight (8) intersections in the vicinity of the project site, two of which are driveways for the project:



1. Rosemead Boulevard / Garvey Avenue;
2. Rosemead Boulevard / Fern Street;
3. Rosemead Boulevard / Project Driveway;
4. Chico Avenue / Garvey Avenue;
5. Chico Avenue / Fern Street;
6. Chico Avenue / Project Driveway;
7. Chico Avenue / Rush Street;
8. Potrero Avenue / Fern Street.

The project site location and proposed study intersections are shown in **Figure 2**.

Traffic Impact Analysis

Figure 1
Project Site Plan

City of South El Monte
Starlite Development
Traffic Impact Analysis

Figure 2
Project Location and Study Intersections

1.3 Study Periods

Traffic operations were evaluated for each of the following scenarios during the weekday morning (7:00 – 9:00 AM) and evening (4:00 – 6:00 PM) peak periods during typical weekday conditions (during the school year):

- Existing Conditions;
- Existing Plus Project Conditions;
- Opening Year 2023 Without Project Conditions;
- Opening Year 2023 With Project Conditions;

Based on information provided by the project applicant, the projected opening year for the proposed project is 2023. The study area and study periods were confirmed with City staff.

2 ENVIRONMENTAL SETTING

This section presents an overview of the existing roadway system within the study area and the methodology used to determine existing traffic volumes.

2.1 Roadway Configurations

The existing configurations of the roadways within the study area are shown in **Table 1** and are further described below.

Table 1: Study Area Roadways

Roadway	Classification	Direction	Lanes		On-Street Parking	Bike Facility	Median	Speed Limit (mph)
			NB/EB	SB/WB				
Rosemead Boulevard	Major Arterial	NB/SB	3	3	Partial, both sides	No	Yes	45
Garvey Avenue	Major Arterial	EB/WB	2	2	Yes, both sides	No	No	35
Rush Street	Secondary Arterial	EB/WB	2	2	Partial, both sides	Class III	No	35
Chico Avenue	Residential/Industrial Collector	NB/SB	1	1	Yes, both sides	No	No	30
Fern Street	Local Street	EB/WB	1	1	Yes, both sides	No	No	25
Potrero Avenue	Local Street	NB/SB	1	1	Yes, both sides	No	No	25

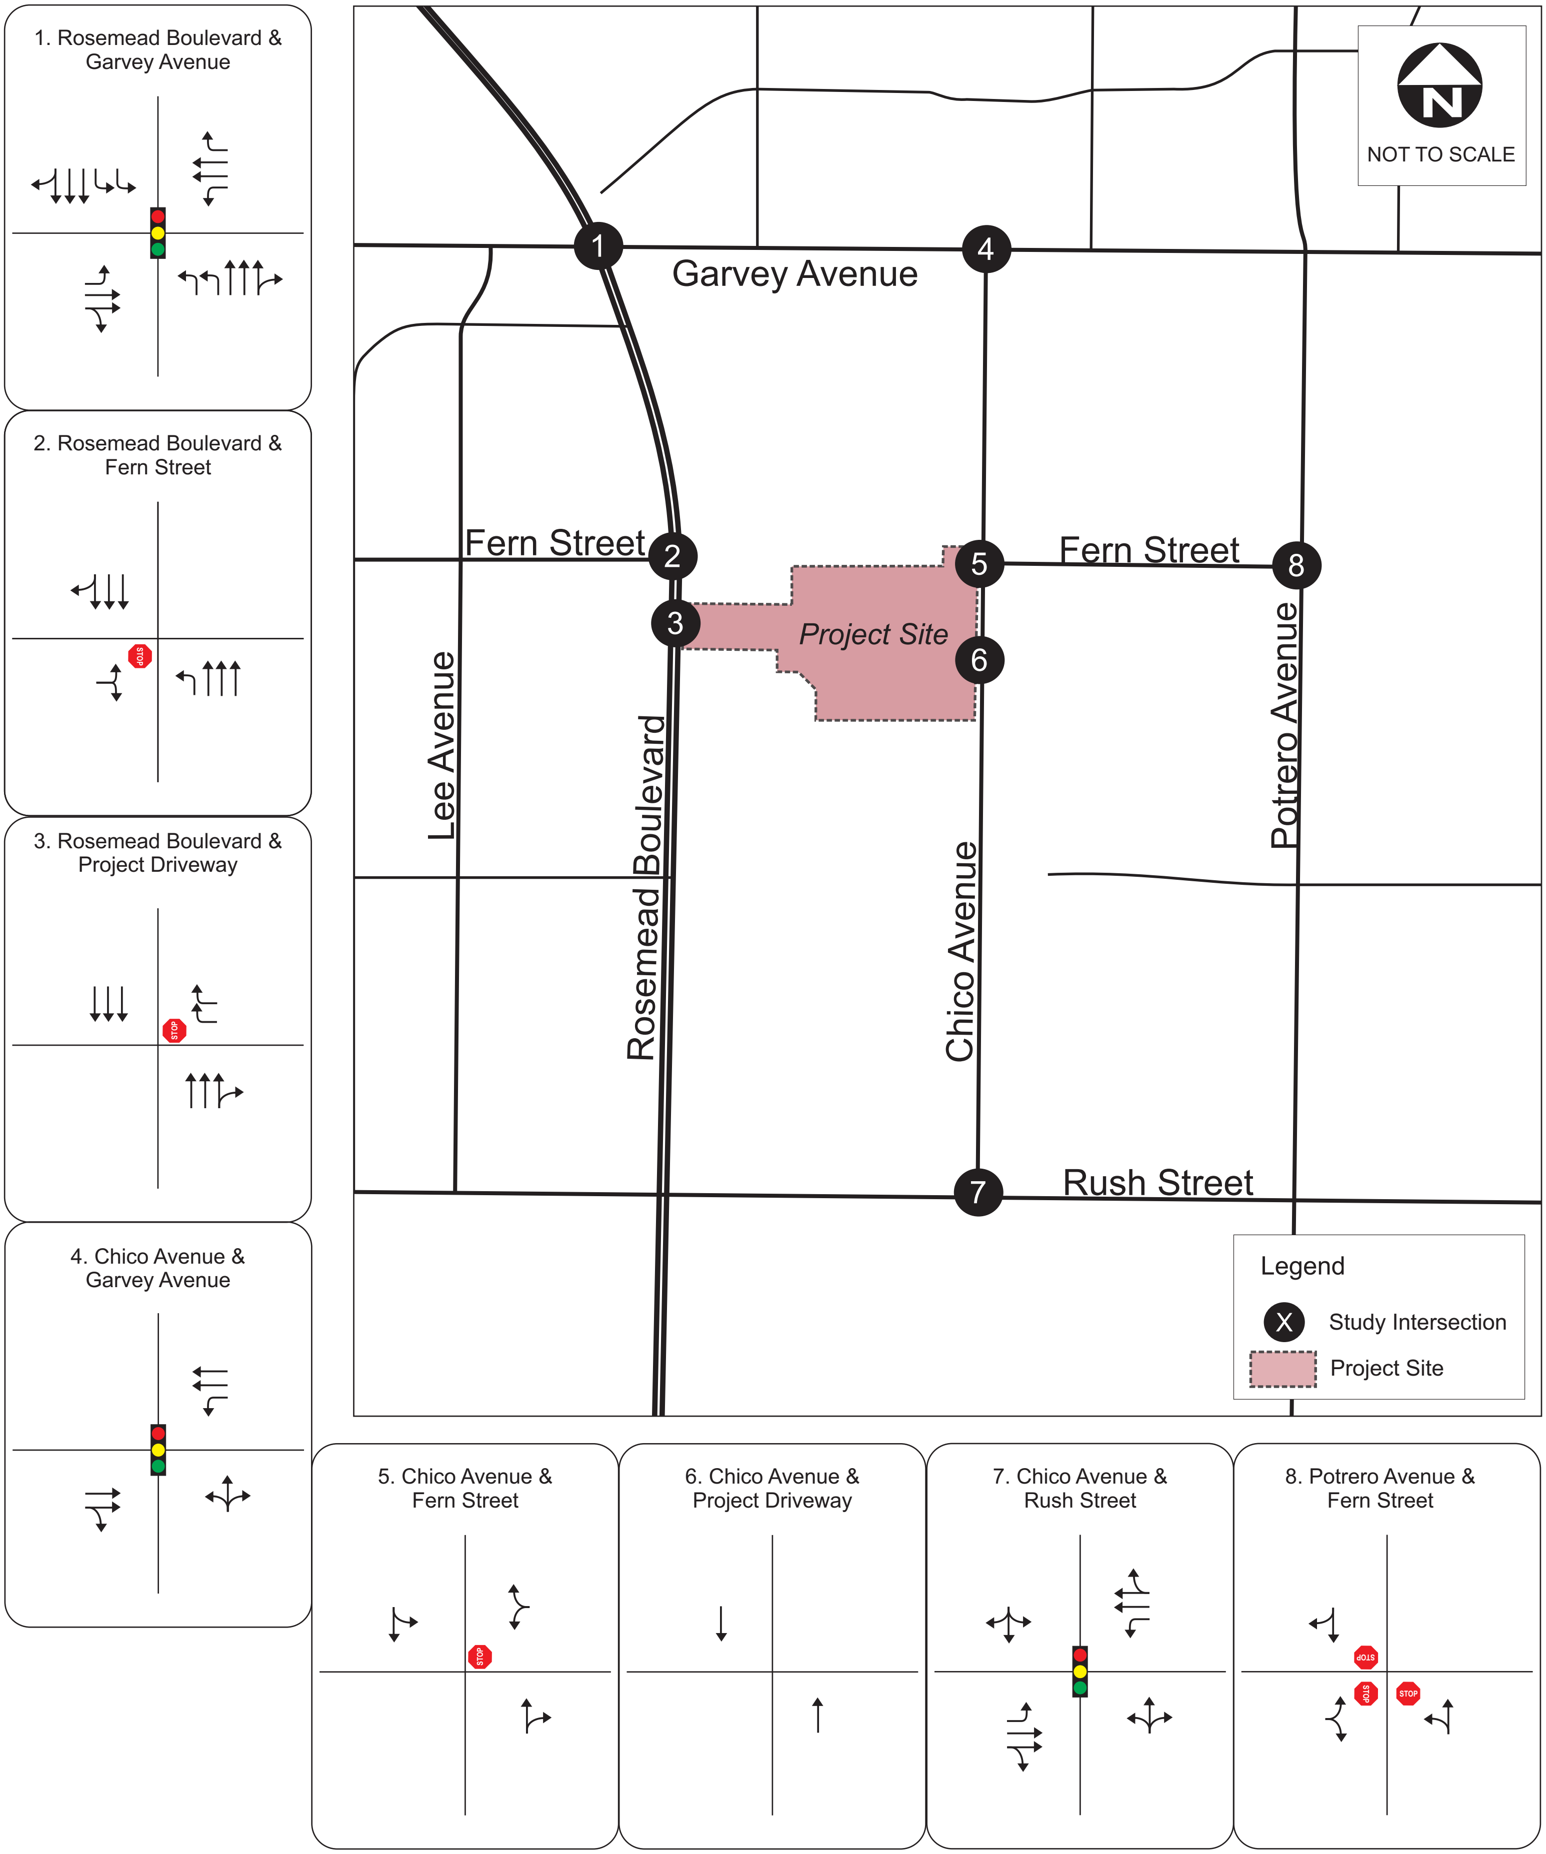
Note: Roadway and bicycle facility classifications based on City of South El Monte General Plan Circulation Element, 2000

Rosemead Boulevard is a divided six-lane north/south-oriented major arterial roadway providing access to the project site at its west driveway. On-street parking is provided on both sides in some parts of the study area, with weekend restrictions. The roadway's speed limit in the study area is established as 45 miles per hour (mph).

Garvey Avenue is a divided four-lane east/west-oriented major arterial roadway with mostly commercial and light industrial frontage. Garvey Avenue includes on-street parking on both sides of the roadway, with a two-hour peak period restriction. The roadway's speed limit in the study area is established as 35 mph.

Rush Street is an east/west-oriented secondary arterial, with four lanes of undivided travel east of Rosemead Boulevard, and two lanes of undivided travel west of Rosemead Boulevard. Rush Street includes on-street parking within some parts of the study area, with some overnight restrictions, and mostly commercial and light industrial frontage. Rush Street is classified as a Class III bicycle route in the City's General Plan. The roadway's speed limit in the study area is established as 35 mph.

Chico Avenue is an undivided two-lane north/south-oriented residential/industrial collector roadway, with mostly light industrial and some residential frontage. On-street parking is provided on both sides throughout the length of the street within the study area, with a weekday overnight restriction, and a two-hour peak period restriction. The roadway's speed limit in the study area is established as 30 mph.

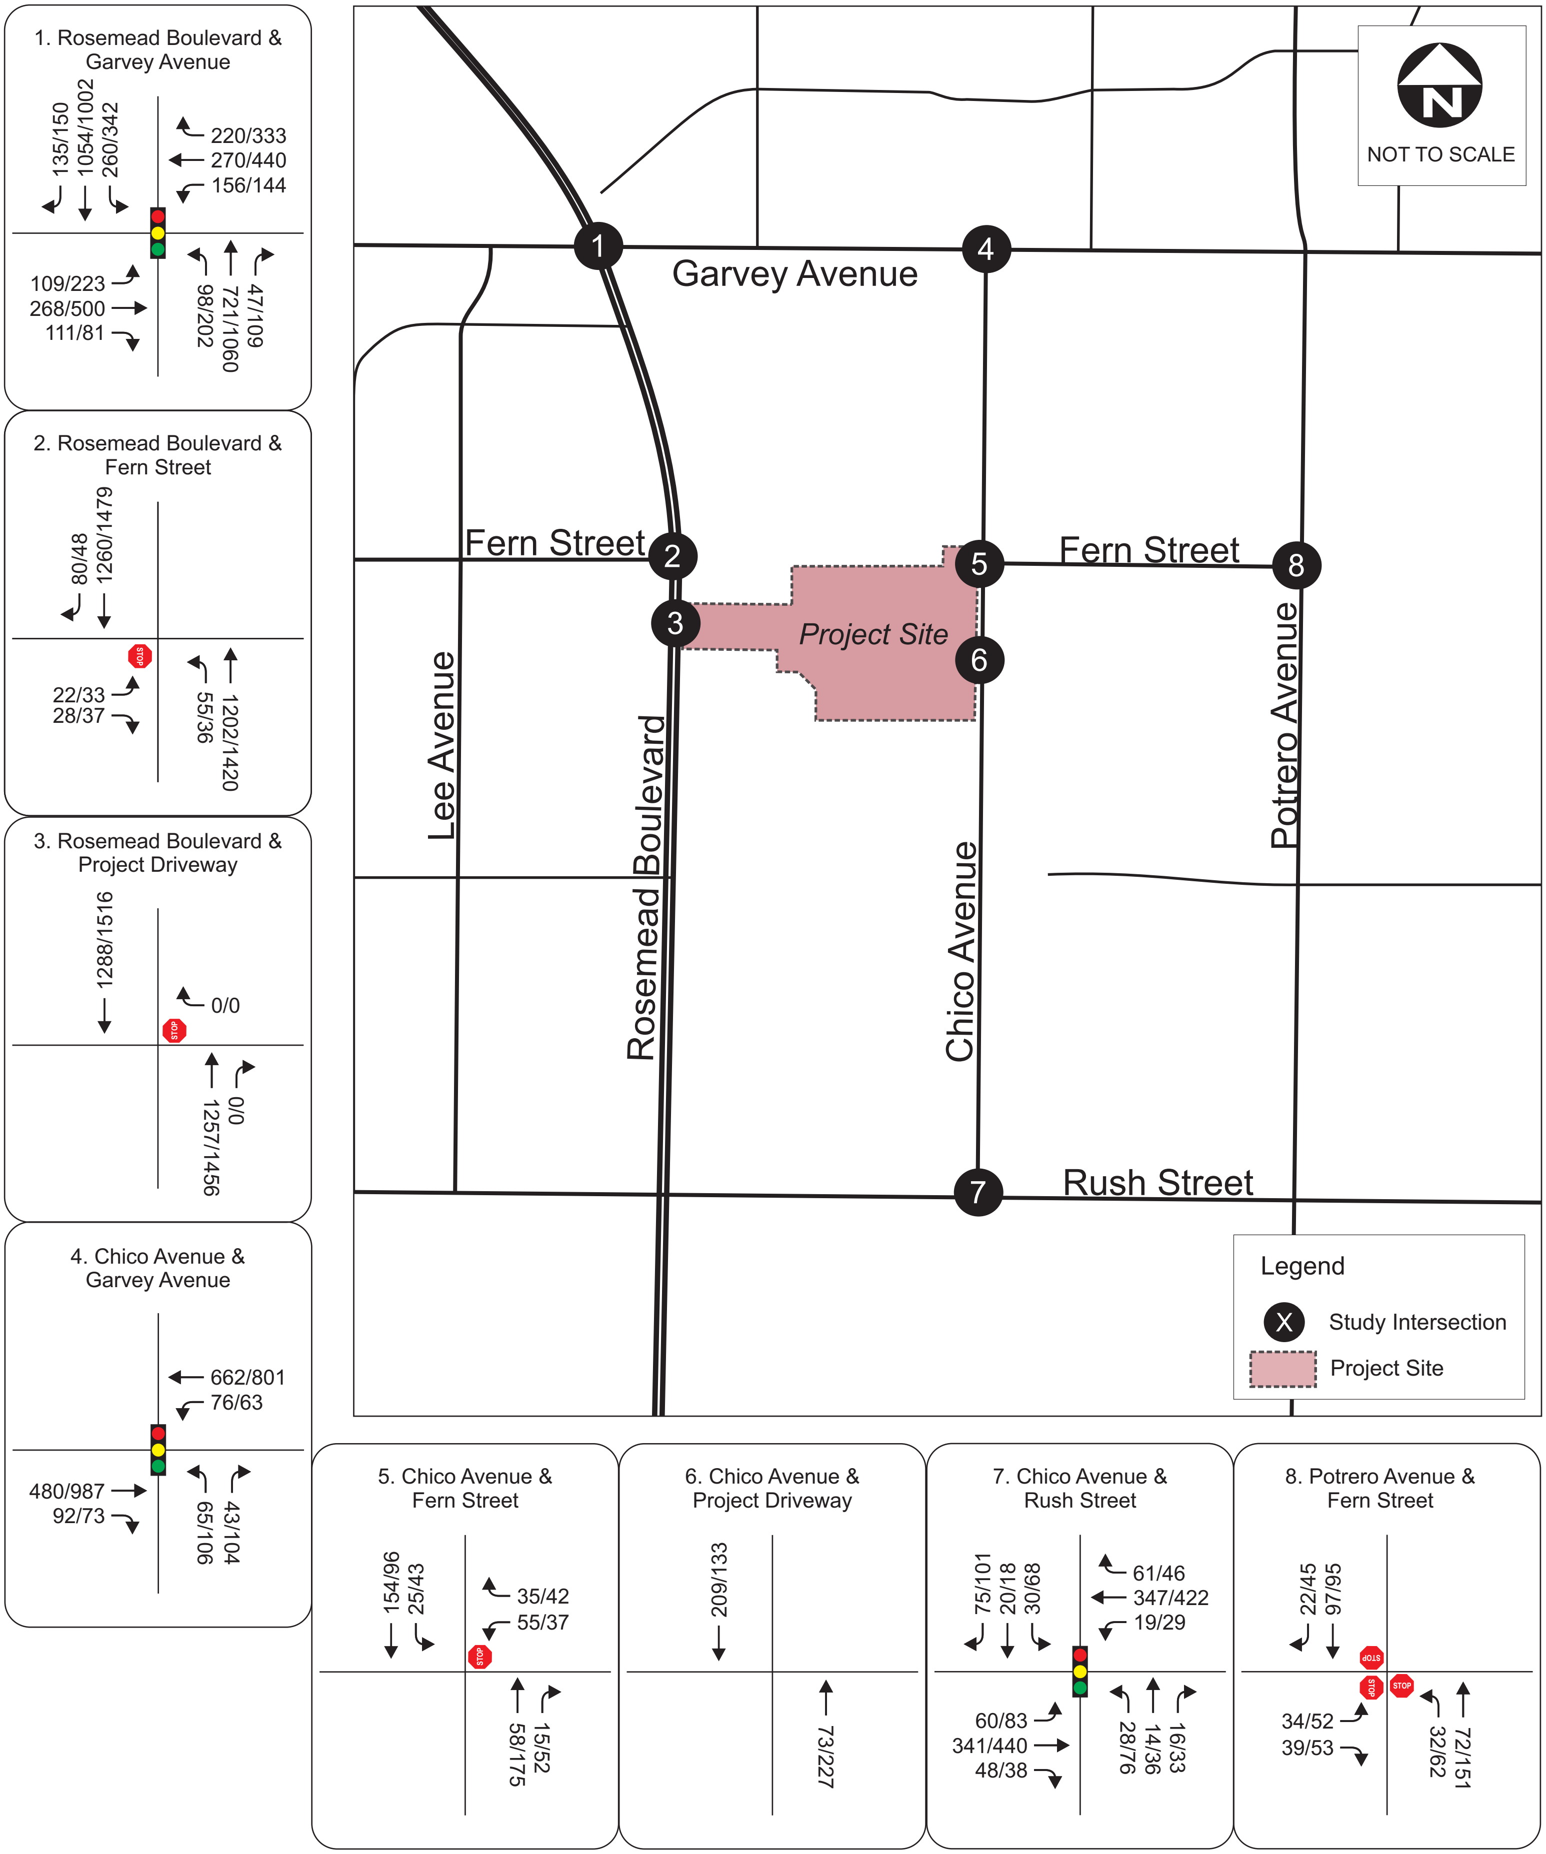


Fern Street is an undivided two-lane east/west-oriented local street with mostly residential and some light industrial frontage. On-street parking is provided on both sides throughout the length of the street within the study area, with a Thursday overnight restriction, and a Wednesday afternoon restriction. The roadway's speed limit in the study area is established as 25 mph.

Potrero Avenue is an undivided two-lane north/south-oriented local street that traverses the study area between Rosemead Boulevard and Rush Street. The roadway has mostly residential frontage, with some light industrial as well as Potrero Elementary School, and provides unrestricted on-street parking on both sides of the street. The roadway's speed limit is 25 mph.

2.2 Existing Traffic Volumes

Existing traffic counts at the study intersections were conducted in March 2021, with the exception of Rosemead Boulevard/Garvey Avenue, where counts taken in January 2021 for a separate, nearby project were used. Existing counts at the Project Driveway intersections on both Rosemead Boulevard and Chico Avenue were derived from the counts taken at the adjacent intersections of Rosemead Boulevard/Fern Street and Chico Avenue/Fern Street, respectively.



All counts were conducted during the morning peak period (7:00 – 9:00 AM) and evening peak period (4:00 – 6:00 PM). The traffic impact analysis is based on the highest single hour of traffic during each time period at each location. Detailed vehicle turning movement data is included in **Appendix A**, while **Figure 3** shows the existing intersection configurations and **Figure 4** shows the existing peak hour volumes at the study intersections.

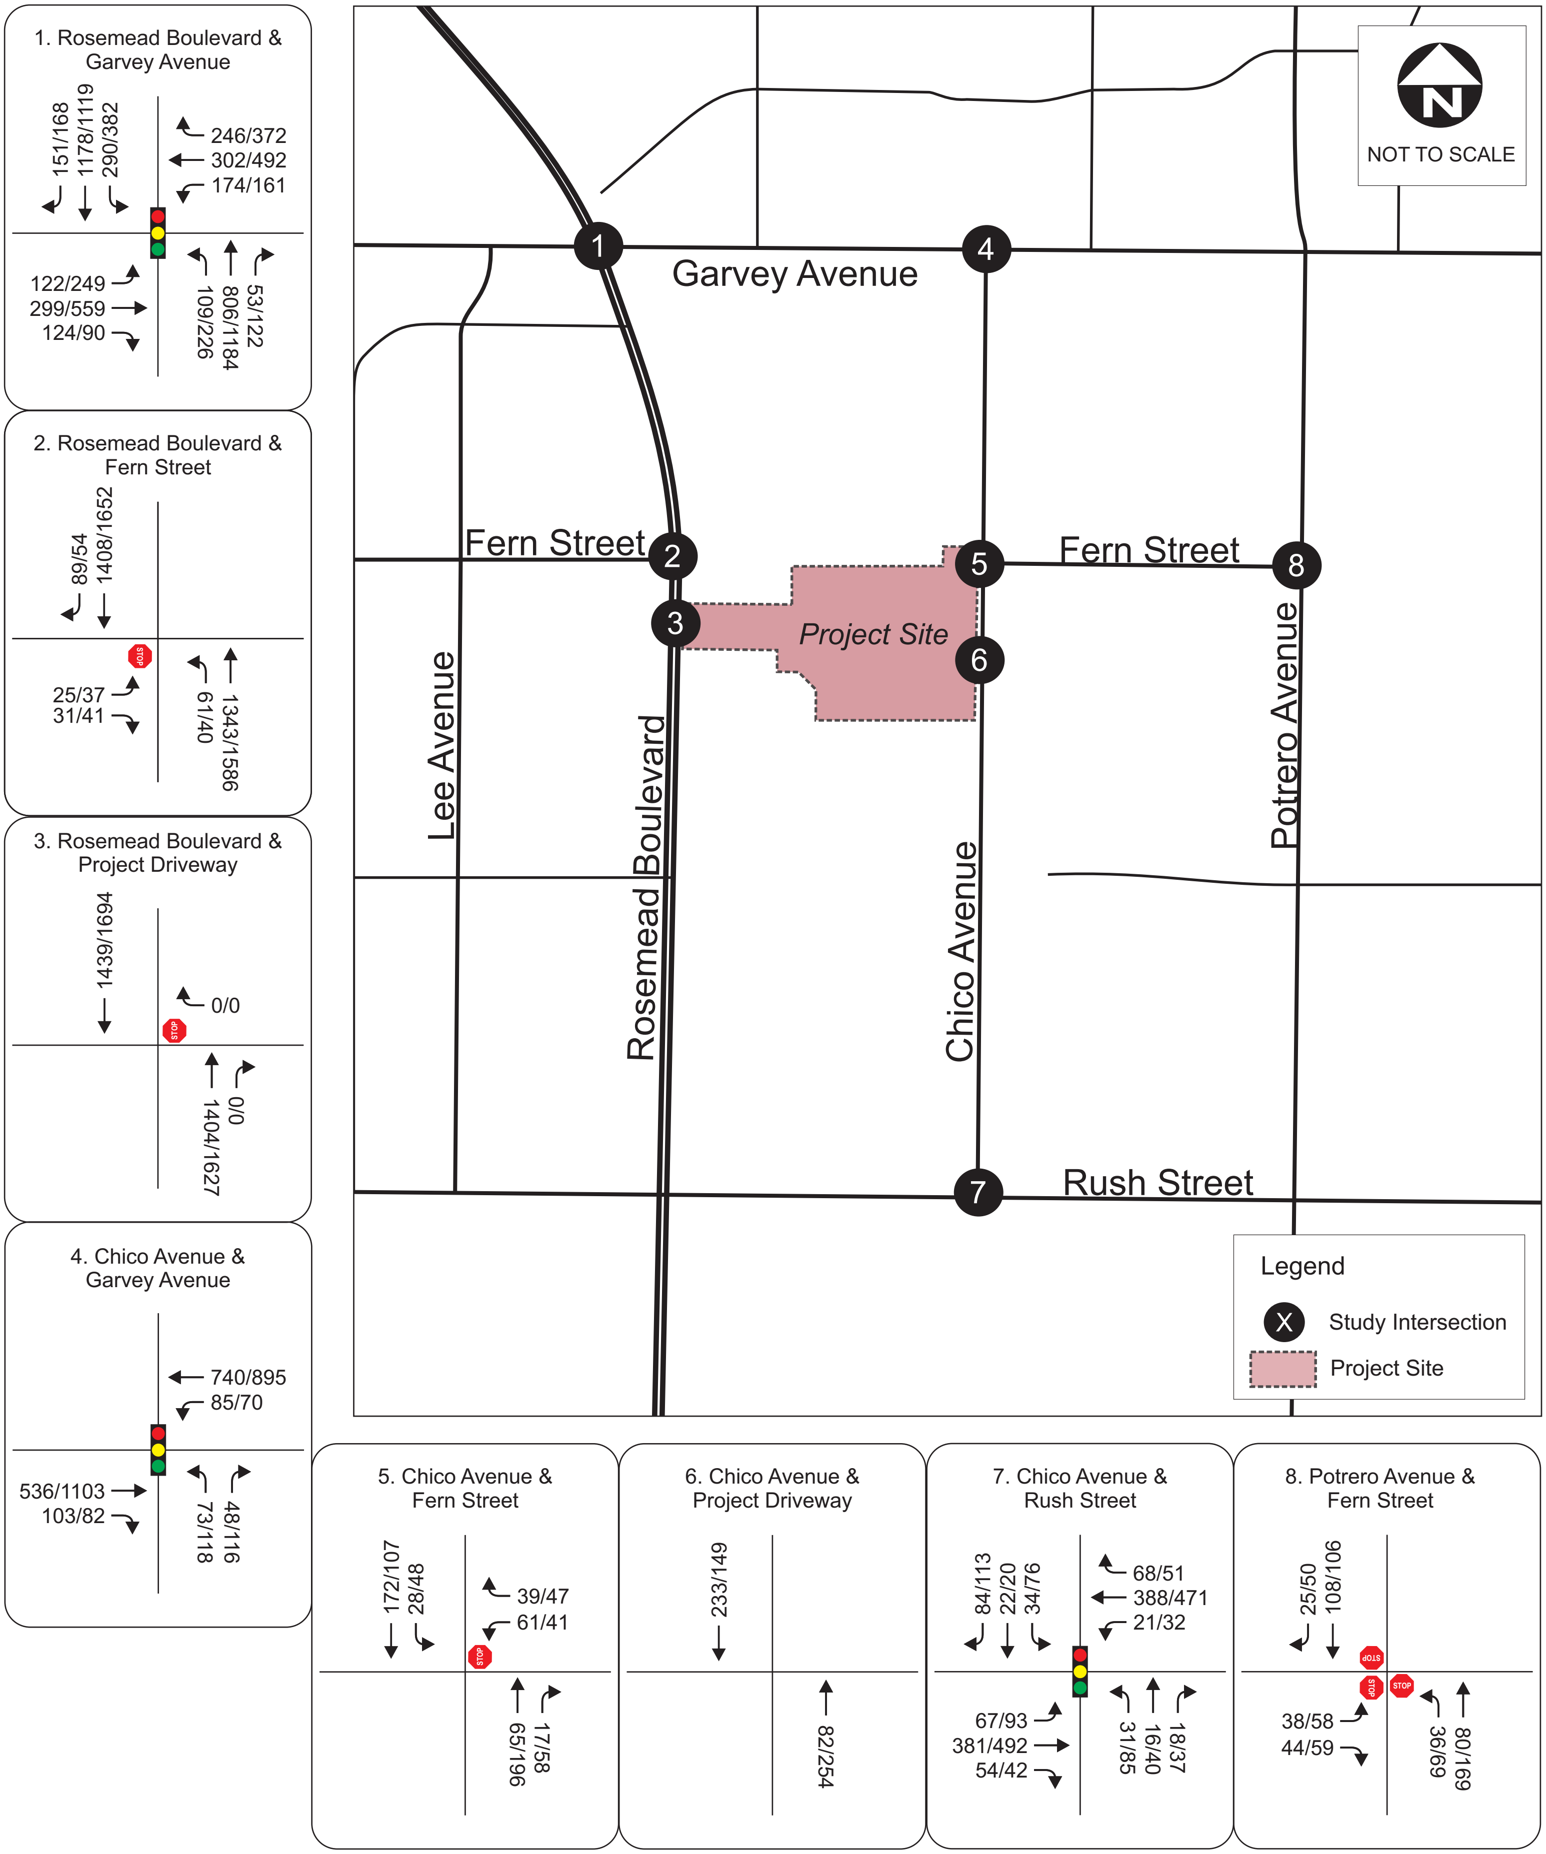
Existing Intersection Peak Hour Volumes

2.3 COVID-19 Period Analysis



Typically, traffic counts are collected on weekdays while schools are in session to avoid any holiday-related shifts in traffic patterns. However, due to the ongoing impacts of the COVID-19 pandemic, large numbers of office employees continue to work remotely from their homes, while schools in South El Monte remain closed to in-person learning at the time traffic counts were taken. To account for these impacts on existing traffic conditions, mainline freeway volumes provided by Caltrans' PeMS system were compared between February 2019 and February 2021 for both Interstate 10 (I-10) and California State Route 60 (SR-60), on either side of Rosemead Boulevard. The details of this comparison are shown below in **Table 2**.

A comparison of the total mainline freeway traffic volumes reveals a reduction in volume of approximately 75,000 vehicles in February 2021 when compared to February 2019. This translates to existing traffic conditions occurring at approximately 89.5% of pre-pandemic traffic levels, giving a multiplier of around 1.12 to be applied to existing traffic counts in order to approximate what traffic conditions would otherwise be without the impacts from the COVID-19 pandemic. Existing peak hour volumes at the study intersections, adjusted with this "COVID-19 factor" multiplier, can be seen in **Figure 5**.

Table 2 – Determining Covid-19 Factor on Existing Traffic Counts

Count Location	February 2019			February 2021		
	EB	WB	Total	EB	WB	Total
SR-60 east of Rosemead Blvd*	114,916	106,434	221,350	85,846	82,893	168,739
SR-60 west of Rosemead Blvd**	117,040	-	117,040	93,982	-	93,982
SR-60 Total			**338,390**			**262,721**
I-10 east of Rosemead Blvd	94,797	90,275	185,072	93,791	94,047	189,491
I-10 west of Rosemead Blvd	93,602	95,889	189,491	93,510	94,081	187,591
I-10 Total			**374,563**			**375,429**
Total – Both Freeways			***712,953***			***638,150***

**Eastbound volumes for SR-60 east of Rosemead Blvd were not available for February 2019; February 2018 volumes were used.*
***There is no count data for this location in the westbound direction – however, this data was not necessary to compare changes in overall traffic conditions between study years.*

Traffic Impact Analysis

Figure 5
Existing with Covid Factor Intersection Peak Hour Volumes

3 TRAFFIC OPERATIONS ANALYSIS METHODOLOGY

The quality of traffic operations is characterized using the concept of level of service (LOS). Level of service is defined by a range of grades from A (best) to F (worst). At intersections, LOS "A" represents relatively free flow operating conditions with little or no delay. LOS "F" is characterized by extremely unstable flow conditions, severe congestion and delays with traffic volumes at or near the intersection's design capacity. This typically results in long vehicular queues extending from all approaches to intersection.

Analysis of traffic operations are conducted according to the traffic impact analysis guidelines provided by the City of South El Monte. Per the City's guidelines, at signalized intersections within City jurisdiction, LOS analysis is performed using Intersection Capacity Utilization (ICU) operations methodology, utilizing Synchro 10 software. Also per the City's guidelines, LOS analysis of traffic operations for unsignalized iintersections is conducted utilizing the Highway Capacity Manual (HCM) methodology, which uses vehicular delay criteria to determine LOS. **Table 3** presents a brief description of each level of service letter grade, as well as the range of delays or V/C ratios associated with each grade for signalized and unsignalized intersections.

Table 3: Intersection Level of Service Definitions – ICU and HCM Methodologies

Level Of Service	Description	Volume to Capacity (V/C) Ratio	HCM Average Delay (sec) - Signalized Intersections	HCM Average Delay (sec) - Unsignalized Intersections
A	Excellent operation. All approaches to the intersection appear quite open, turning movements are easily made, and nearly all drivers find freedom of operation.	0.000-0.600	≤ 10	≤ 10
B	Very good operation. Many drivers begin to feel somewhat restricted within platoons of vehicles. This represents stable flow. An approach to an intersection may occasionally be fully utilized and traffic queues start to form.	>0.600-0.700	>10-20	>10-15
C	Good operation. Occasionally drivers may have to wait more than 60 seconds, and back-ups may develop behind turning vehicles. Most drivers feel somewhat restricted.	>0.700-0.800	>20-35	>15-25
D	Fair operation. Cars are sometimes required to wait more than 60 seconds during short peaks. There are no long-standing traffic queues.	>0.800-0.900	>35-55	>25-35
E	Poor operation. Some long-standing vehicular queues develop on critical approaches to intersections. Delays may be up to several minutes.	>0.900-1.000	>55-80	>35-50
F	Forced flow. Represents jammed conditions. Backups form locations downstream or on the cross street may restrict or prevent movement of vehicles out of the intersection approach lanes; therefore, volumes carried are not predictable. Potential for stop and go type traffic flow.	> 1.000	>80	>50

3.1 Thresholds of Significance

The City of South El Monte Transportation Study Guidelines targets LOS D or better for acceptable intersection operations. Signalized intersections typically require improvements when the addition of project traffic results in the degradation of intersection operations from LOS D or better to LOS E or F and will increase the V/C by 0.01 or more. Unsignalized intersections will require improvements if the addition of project traffic results in the degradation of intersection operations from LOS D or better to LOS E or F and if the intersection meets peak hour signal warrants either caused by the project volumes or if project volumes are added to an intersection that meets peak hour signal warrants in baseline scenarios. Furthermore, if a project contributes 2% or more of the total traffic at any intersection expected to be deficient, improvements should be considered.

4 EXISTING CONDITIONS

A level of service analysis was conducted to evaluate existing intersection operations during the AM and PMpeak hours at the study intersections. **Table 4** summarizes the existing LOS at the study intersections, while **Table 5** summarizes existing LOS at the study intersections with the "COVID-19 factor" multiplier taken into account to approximate normal traffic conditions. LOS calculation sheets are provided in **Appendix B**.

Table 4: Existing Intersection Peak Hour Level of Service

Intersection		Control Type	AM Peak Hour			PM Peak Hour		
			V/C	Delay (sec)	LOS	V/C	Delay (sec)	LOS
1	Rosemead Blvd / Garvey Ave	Signalized	0.67	-	B	**0.95**	-	**E**
2	Rosemead Blvd / Fern St	TWSC	-	**49.0**	**E**	-	**125.2**	**F**
3	Rosemead Blvd / Project Dwy	TWSC	-	0.0	A	-	0.0	A
4	Chico Ave / Garvey Ave	Signalized	0.45	-	A	0.68	-	B
5	Chico Ave / Fern St	TWSC	-	10.8	B	-	11.6	B
6	Chico / Project Dwy	Uncontrolled	-	0.0	A	-	0.0	A
7	Chico Ave / Rush St	Signalized	0.61	-	B	0.62	-	B
8	Potrero Ave / Fern St	AWSC	-	8.0	A	-	9.1	A

Notes: V/C = Volume to Capacity Ratio; LOS = Level of Service; TWSC = two-way stop-controlled; AWSC = all-way stop-controlled.

As shown in **Table 4**, the signalized Rosemead Boulevard/Garvey Avenue intersection is currently operating at LOS E during the PM peak hour, while the unsignalized Rosemead Boulevard/Fern Street intersection is currently operating at LOS E during the AM peak hour and at LOS F during the PM peak hour. It should be noted the analysis methodology for unsignalized intersections, such as used at the Rosemead Boulevard/Fern Street is especially sensitive at intersections involving a large-volume street with a minor street. The delay value represents the low volumes of vehicles turning to and from Fern Street having to wait for enough clearance of vehicles traveling a long the free-flow Rosemead Boulevard to make their turns—which is the critical movement delay value shown in the table.

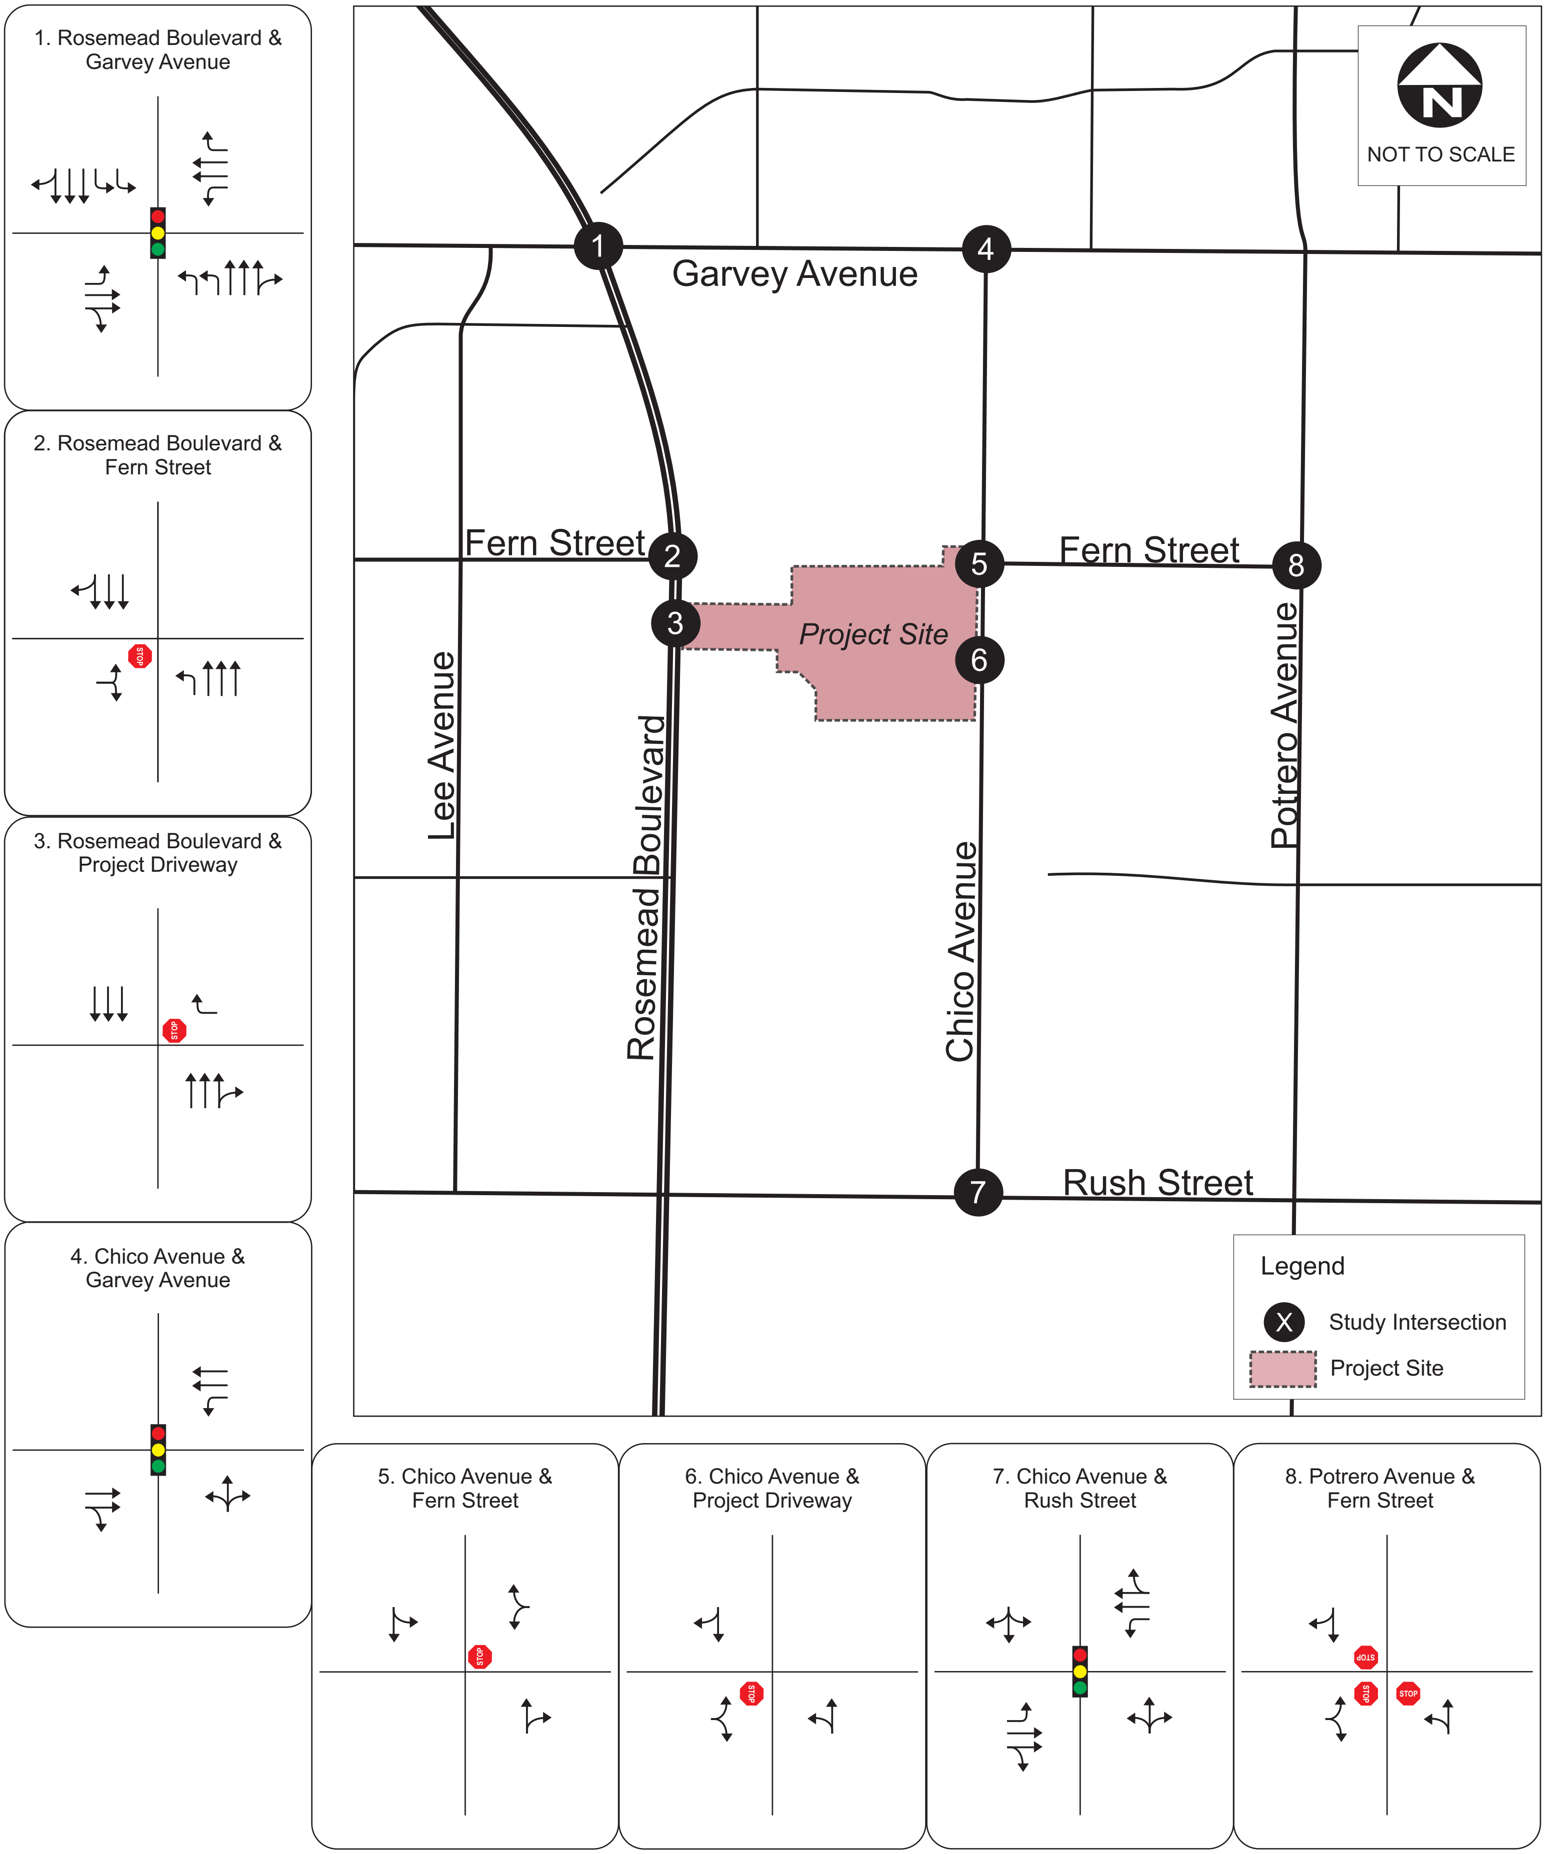
Table 5: Existing Intersection plus Covid-19 Factor Peak Hour Level of Service

	Intersection	Control Type	AM Peak Hour			PM Peak Hour		
			V/C	Delay (sec)	LOS	V/C	Delay (sec)	LOS
1	Rosemead Blvd / Garvey Ave	Signalized	0.73	-	C	**1.10**	-	**F**
2	Rosemead Blvd / Fern St	TWSC	-	**92.0**	**F**	-	**341.1**	**F**
3	Rosemead Blvd / Project Dwy	TWSC	-	0.0	A	-	0.0	A
4	Chico Ave / Garvey Ave	Signalized	0.48	-	A	0.71	-	C
5	Chico Ave / Fern St	TWSC	-	11.3	B	-	12.2	B
6	Chico / Project Dwy	Uncontrolled	-	0.0	A	-	0.0	A
7	Chico Ave / Rush St	Signalized	0.63	-	B	0.70	-	B
8	Potrero Ave / Fern St	AWSC	-	8.1	A	-	9.5	A

Notes: V/C = Volume to Capacity Ratio; LOS = Level of Service; TWSC = two-way stop-controlled; AWSC = all-way stop-controlled.

As shown in **Table 5**, the signalized Rosemead Boulevard/Garvey Avenue intersection is currently operating at LOS F during the PM peak hour, while the unsignalized Rosemead Boulevard/Fern Street intersection is currently operating at LOS F during both the AM and PM peak hours.

5 PROPOSED PROJECT TRAFFIC



This section describes the methodology used to determine project trip generation and the distribution of project traffic within the study area.

The first step in analyzing traffic conditions with the project is to estimate the number of new trips expected to be generated by the proposed project. The proposed project consists of 207 residential units, including 38 multi-family residential units and 169 detached single-family housing units. The project site is currently occupied by the Rosemead Swap Meet, which operates during non-pandemic times only on Saturdays and Sundays. Access to the proposed project will be provided through what is expected to be a right-in, right-out only driveway on Rosemead Boulevard to the west and a full-access driveway on Chico Avenue to the east.

To account for the addition of project access at the Rosemead Boulevard/Project Driveway and Chico Avenue/Project Driveway intersections, with project intersection lane confiruations are shown in **Figure 6.**

5.1 Project Trip Generation

The trip generation analysis was completed in a two-step process. First, the number of trips generated by the proposed development was calculated by multiplying the trip generation rate for low-rise multi-family housing and for detached single-family housing by the proposed number of units for each use in the project. The result of this calculation is shown in **Table 6**. Trip generation rates for the proposed project were calculated based on the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10th Edition.

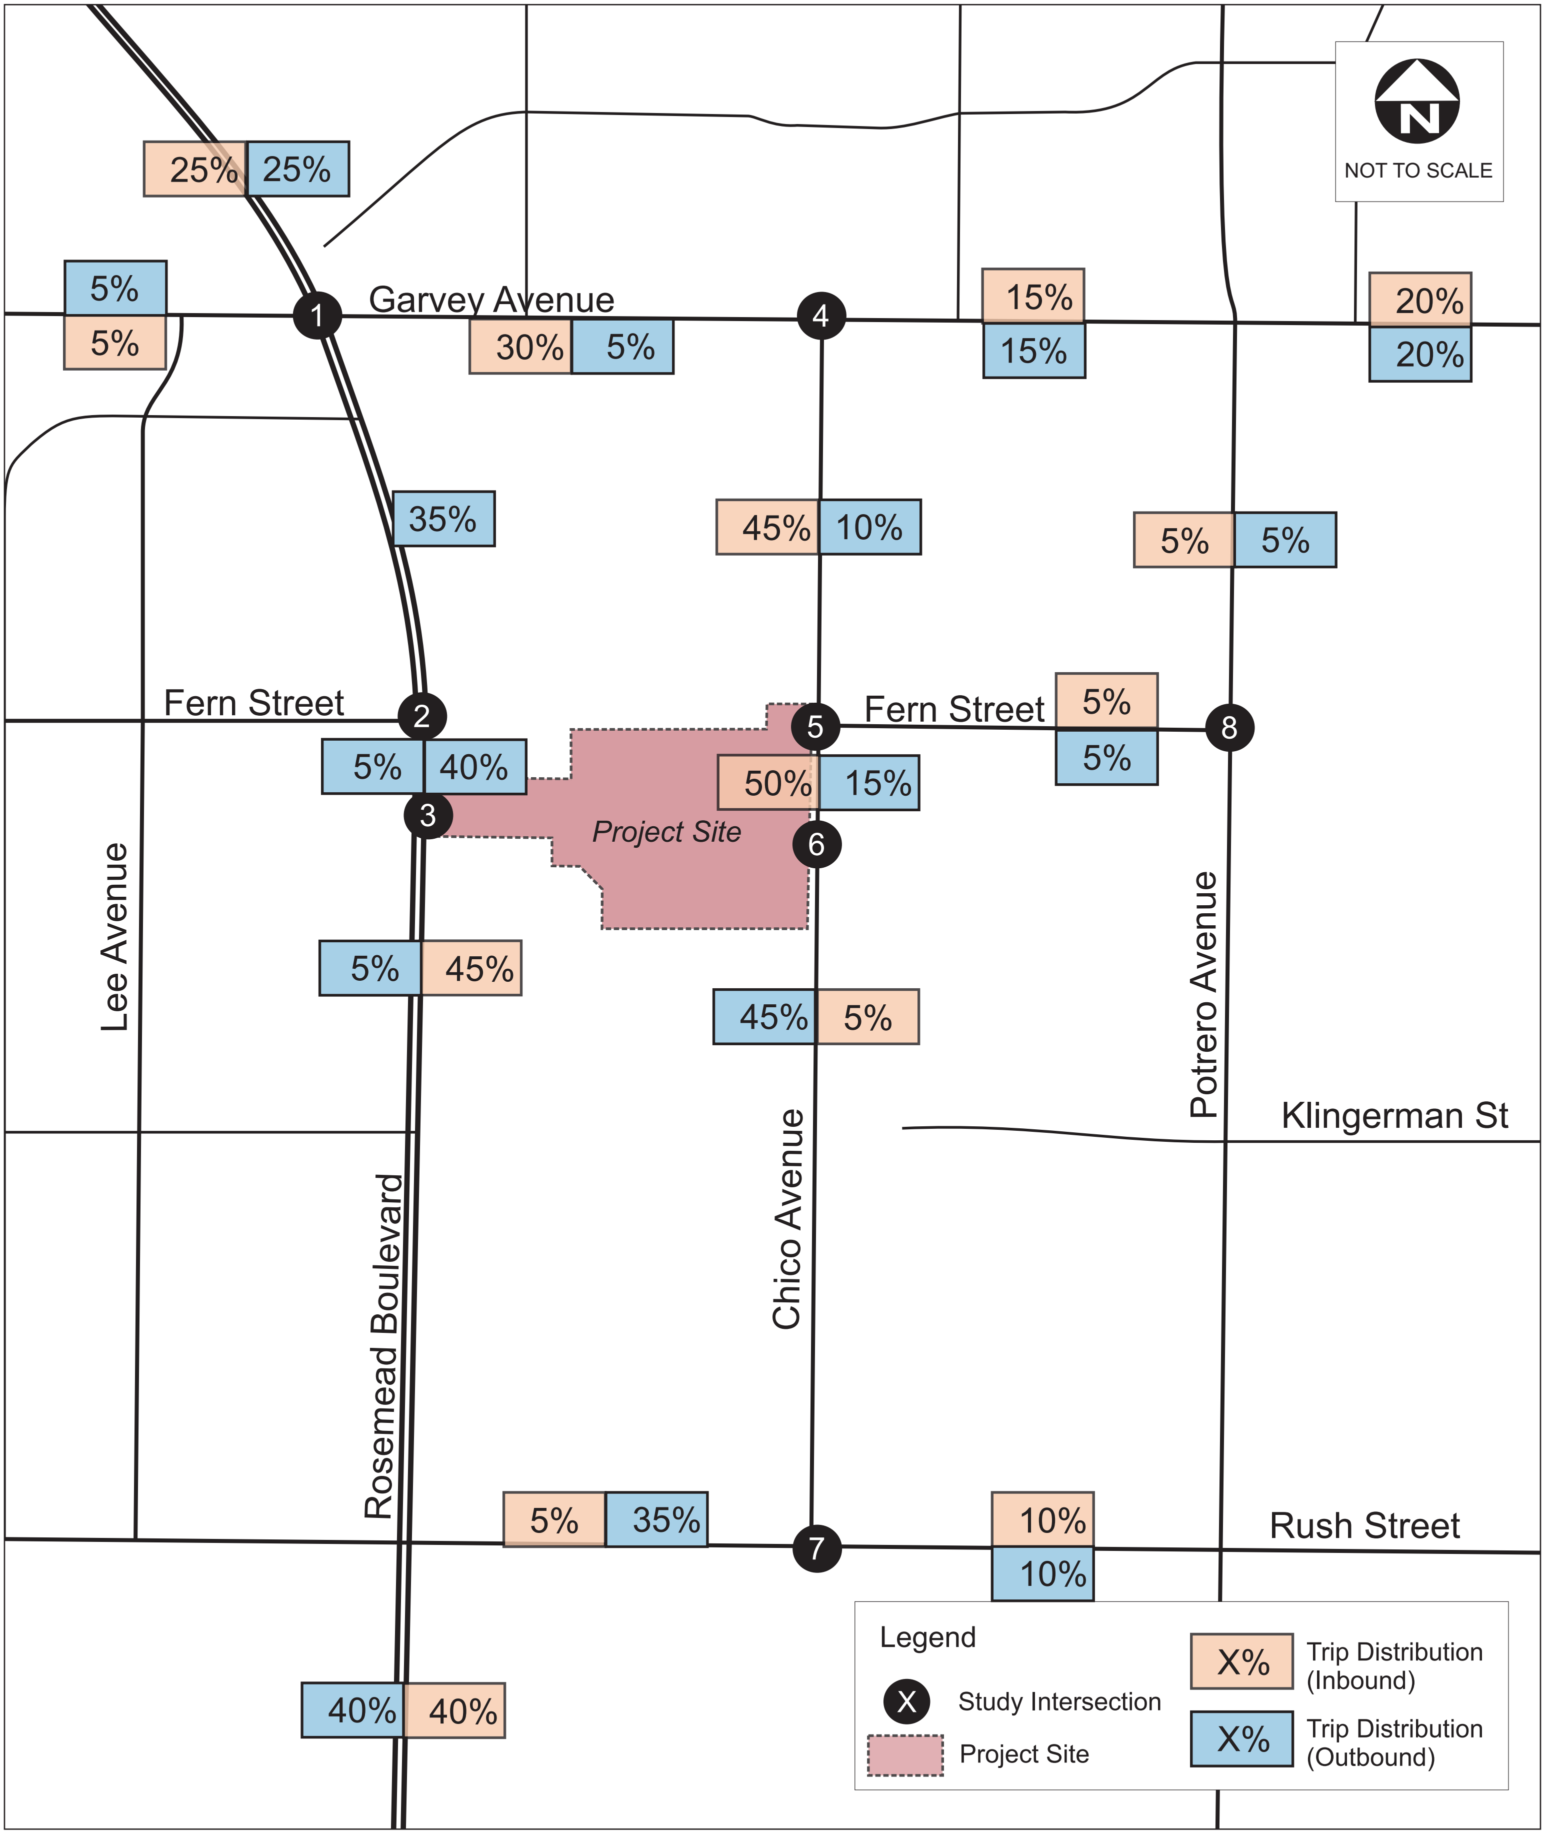
City of South El Monte
Starlite Development
Traffic Impact Analysis

D-a-20

Figure 6
With Project Intersection Lane Configurations

Table 6: Proposed Project Trip Generation

Land Use (ITE Code)	# of Units	Trip Generation Rates							Trip Generation						
		AM Peak Hour			PM Peak Hour			Daily	AM Peak Hour			PM Peak Hour			Daily
		In	Out	Total	In	Out	Total		In	Out	Total	In	Out	Total	
Multi-Family Housing (Low-Rise) (220)	38	23%	77%	0.46	63%	37%	0.56	7.32	4	13	17	13	8	21	278
Single-Family Detached Housing (221)	169	25%	75%	0.74	63%	37%	0.99	9.44	31	94	125	105	62	167	1,595
								Total*	**35**	**110**	**143**	**119**	**70**	**189**	**1,874**

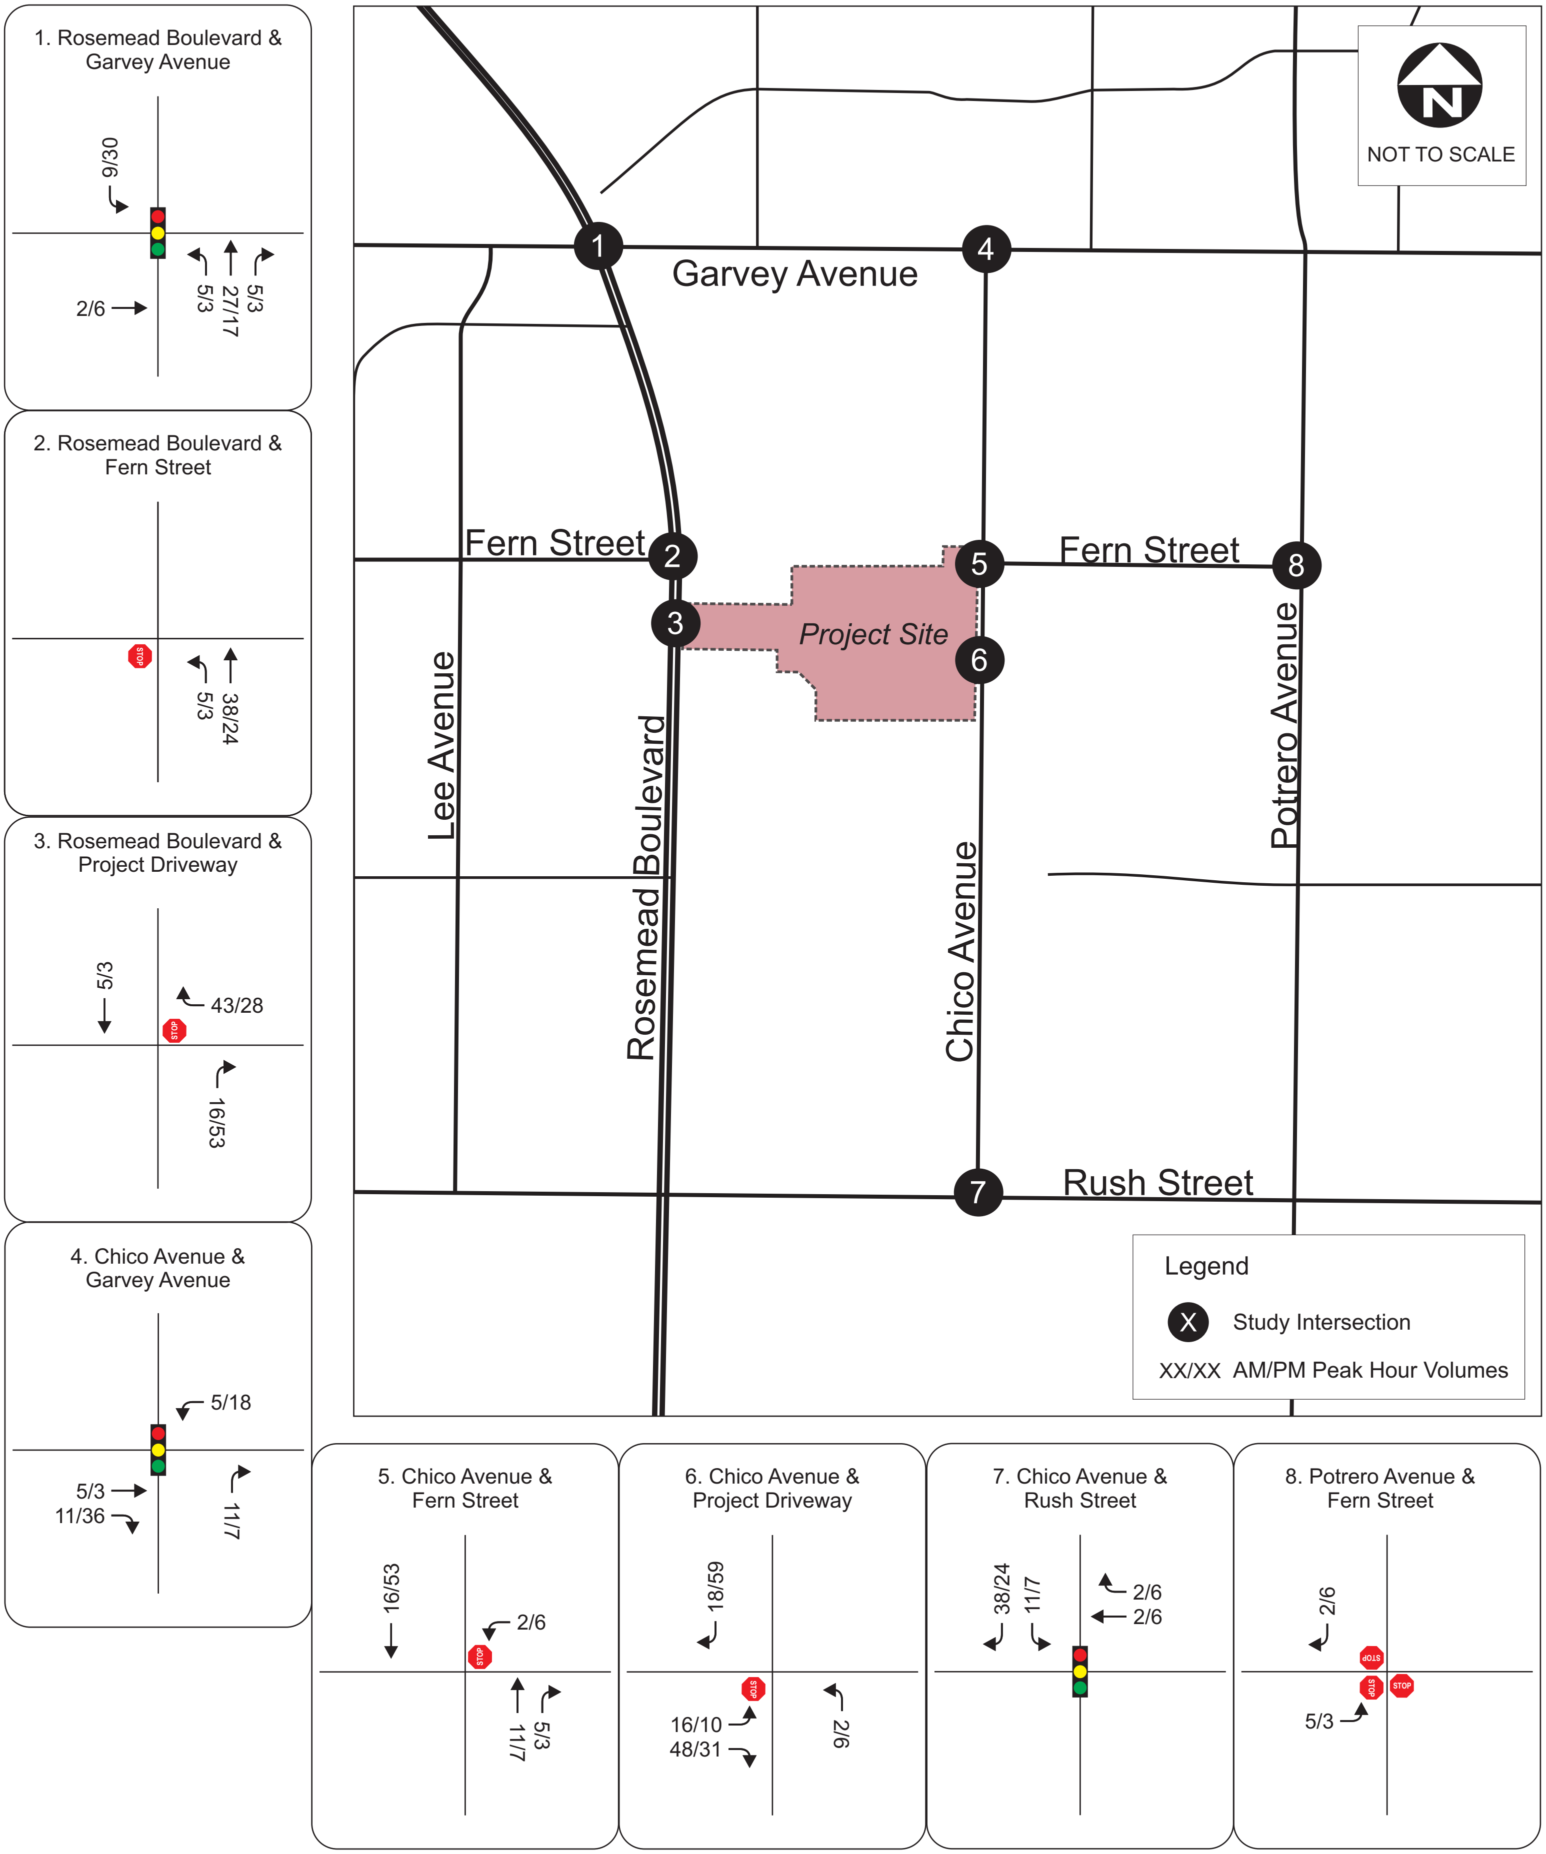


**Difference due to rounding.*

As shown in **Table 6**, the proposed project is forecast to generate 143 new AM peak hour trips, 189 new PM peak hour trips, and 1,874 new daily trips. Because the current project site is only in use on weekends, no credit for existing site traffic is taken into consideration with this analysis.

5.2 Project Trip Distribution and Assignment

Trip distribution assumptions are used to determine the origin and destination of new vehicle trips associated with the project. Project trip distribution is based on the circulation network in the vicinity of the project as well as information provided by the project applicant. The project trip distribution is shown in **Figure 7**.



The new trips generated by the project, as shown in **Table 6**, were then assigned to the surrounding roadway system based on the distribution pattern shown in **Figure 7** to estimate the project-related peak-hour traffic at each of the study intersections. **Figure 8** illustrates the proposed project trip assignment onto the roadway network during theAM and PM peak hours.

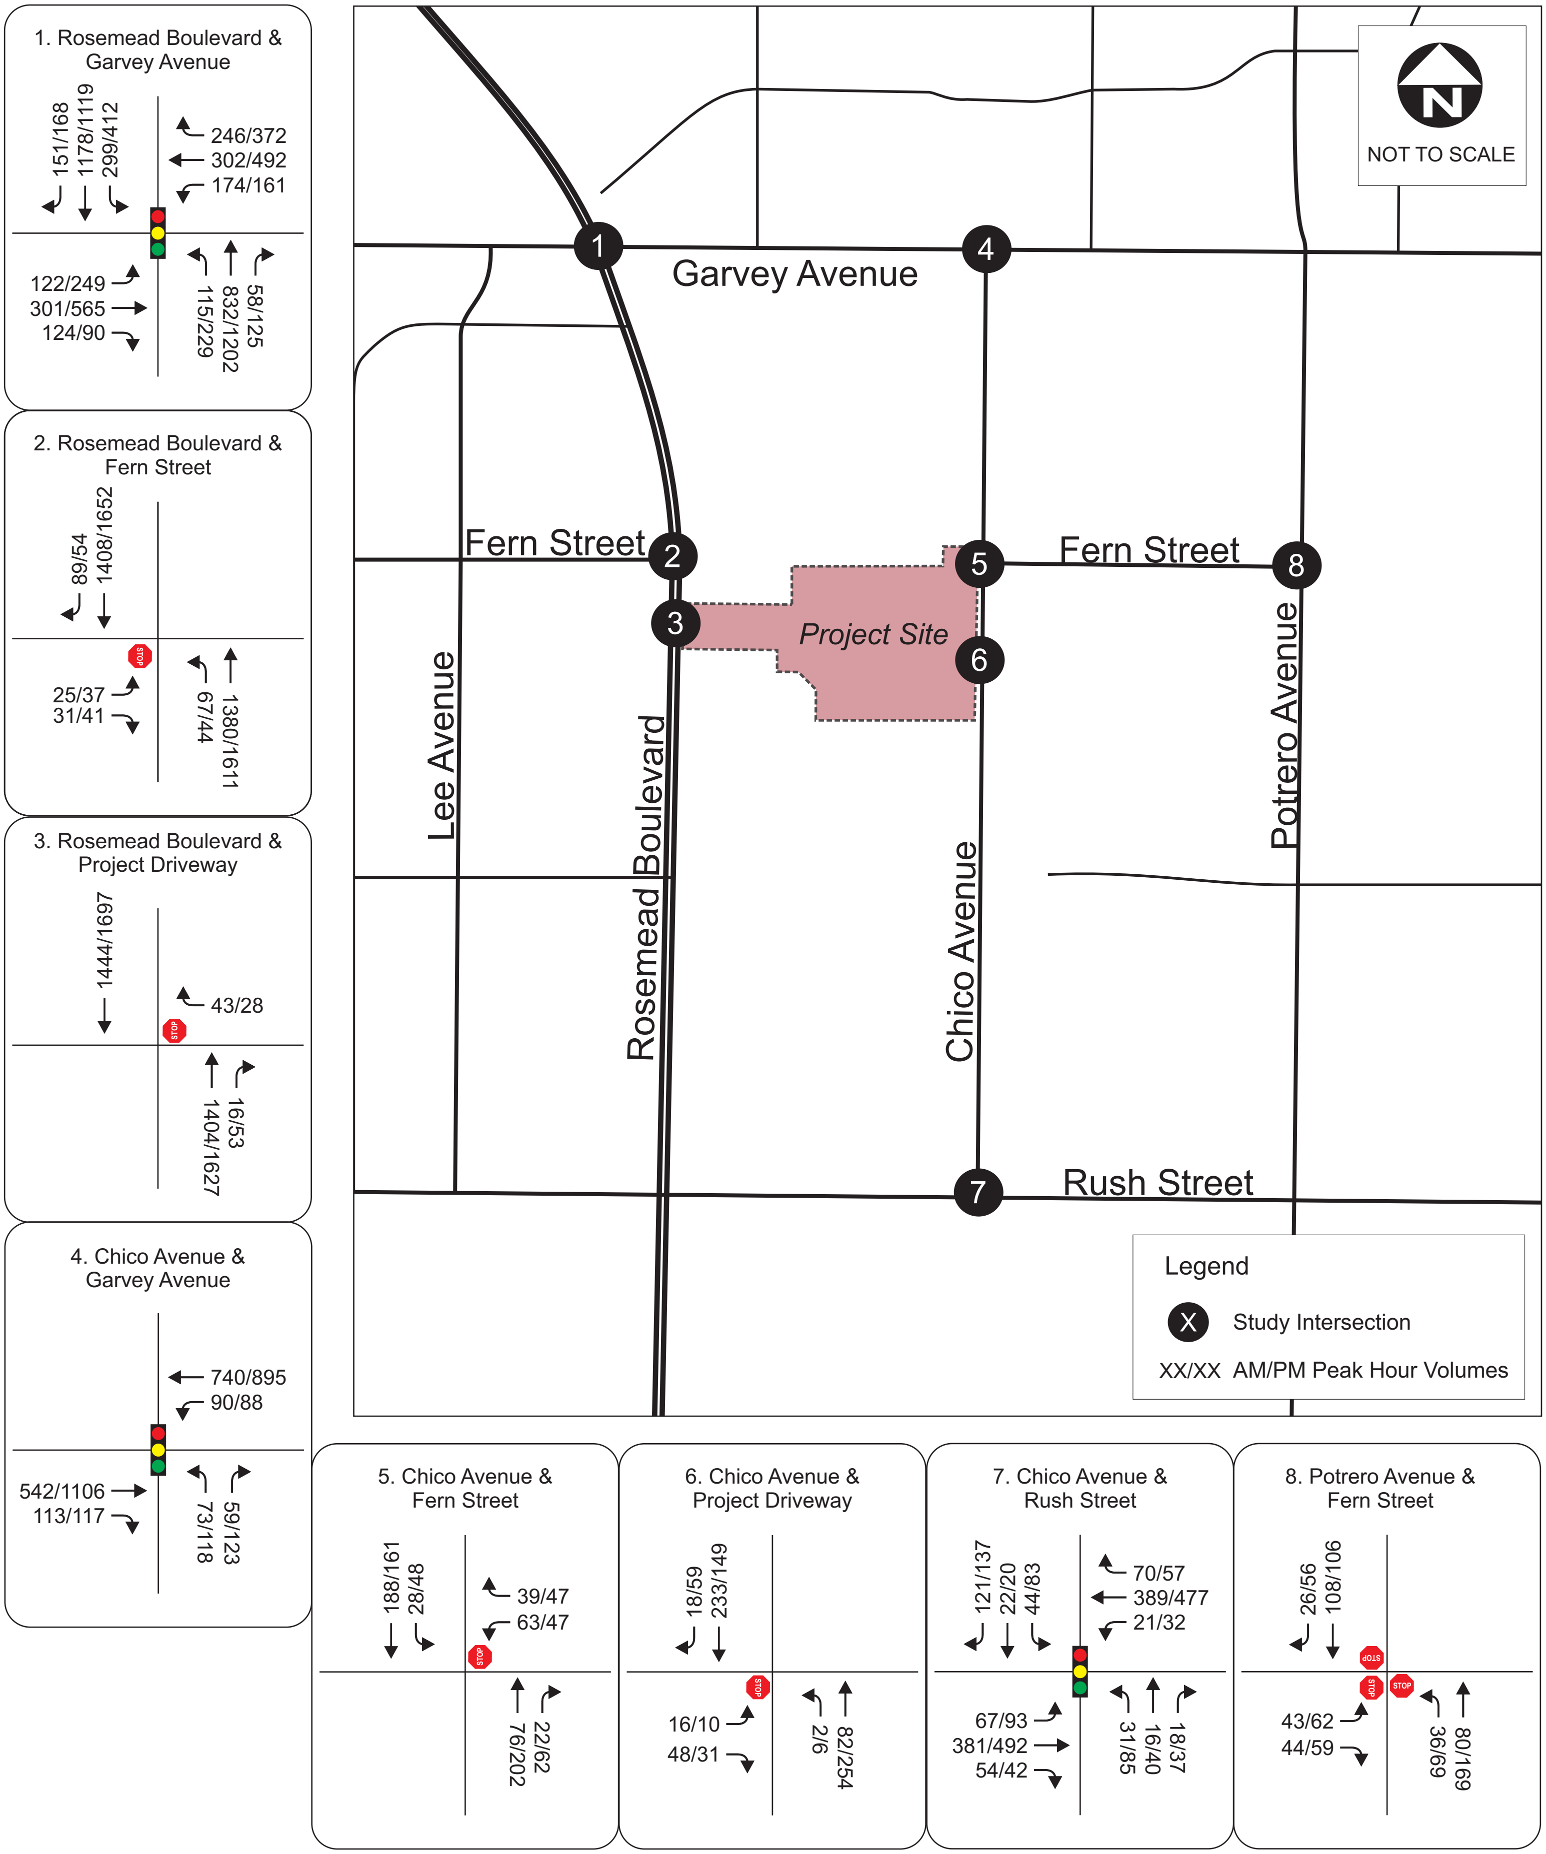
6 EXISTING PLUS PROJECT CONDITIONS

Existing plus project conditions were developed by adding trips forecast to be generated by the proposed project, as described in **Section 5**, to existing volumes, as described in **Section 4**. Existing plus project traffic volumes are illustrated in **Figure 9**.

6.1 Existing Plus Project Intersection Levels of Service



A level of service analysis was conducted to evaluate existing plus project intersection operations during the AM and PM peak hours at the study intersections. Existing plus project levels of service at the study intersections are summarized without changes to Rosemead Boulevard in **Table 7**. Level of service calculation worksheets are included in **Appendix B**.

Table 7: Existing Plus Project Intersection Peak Hour Level of Service

#	Intersection	Existing Conditions (w/COVID-19 factor)						Existing Plus Project Conditions						Change in V/C or Delay		Exceeds Threshold Due to Project?
		AM Peak Hour			PM Peak Hour			AM Peak Hour			PM Peak Hour			AM Peak Hour	PM Peak Hour	
		V/C	Delay (sec)	LOS	V/C	Delay (sec)	LOS	V/C	Delay (sec)	LOS	V/C	Delay (sec)	LOS			
1	Rosemead Blvd / Garvey Ave	0.73	-	C	**1.10**	-	**F**	0.78	-	C	**1.10**	-	**F**	0.05	0.0	No
2	Rosemead Blvd / Fern St	-	**92.0**	**F**	-	**341.1**	**F**	-	**125.0**	**F**	-	**374.2**	**F**	33.0	33.1	No
3	Rosemead Blvd / Project Dwy	-	0.0	A	-	0.0	A	-	19.5	C	-	22.4	C	19.5	22.4	No
4	Chico Ave / Garvey Ave	0.48	-	A	0.71	-	C	0.50	-	A	0.74	-	C	0.02	0.03	No
5	Chico Ave / Fern St	-	11.3	B	-	12.2	B	-	11.7	B	-	13.1	C	0.4	0.9	No
6	Chico / Project Dwy	-	0.0	A	-	0.0	A	-	10.4	B	-	10.2	B	10.4	10.2	No
7	Chico Ave / Rush St	0.63	-	B	0.70	-	B	0.63	-	B	0.70	-	B	0.0	0.0	No
8	Potrero Ave / Fern St	-	8.1	A	-	9.5	A	-	8.1	A	-	9.6	A	0.0	0.1	No

Notes: V/C = Volume to Capacity Ratio, LOS = Level of Service.

As shown in **Table 7**, project trips forecast to be added to the unsignalized intersection at Rosemead Boulevard and Fern Street will increase delay at this intersection due to some volume of project traffic assumed to exit the project site onto Rosemead Boulevard making a U-turn at the Rosemead Boulevard at Fern Street intersection to proceed southbound. With LOS F, this intersection currently already exceeds the City's target threshold for acceptable levels of service, however since the intersection does not degrade in level of service from the baseline scenario and the project does not contribute 2 percent or more traffic to the location it is not considered to exceed the threshold due to the project. While the signalized intersection of Rosemead Boulevard/Garvey Avenue also currently exceeds the city's threshold with LOS F in the PM peak hour, there is no additional delay incurred at this intersection due to forecast project trips in the PM peak hour.

Starlite Development
Traffic Impact Analysis

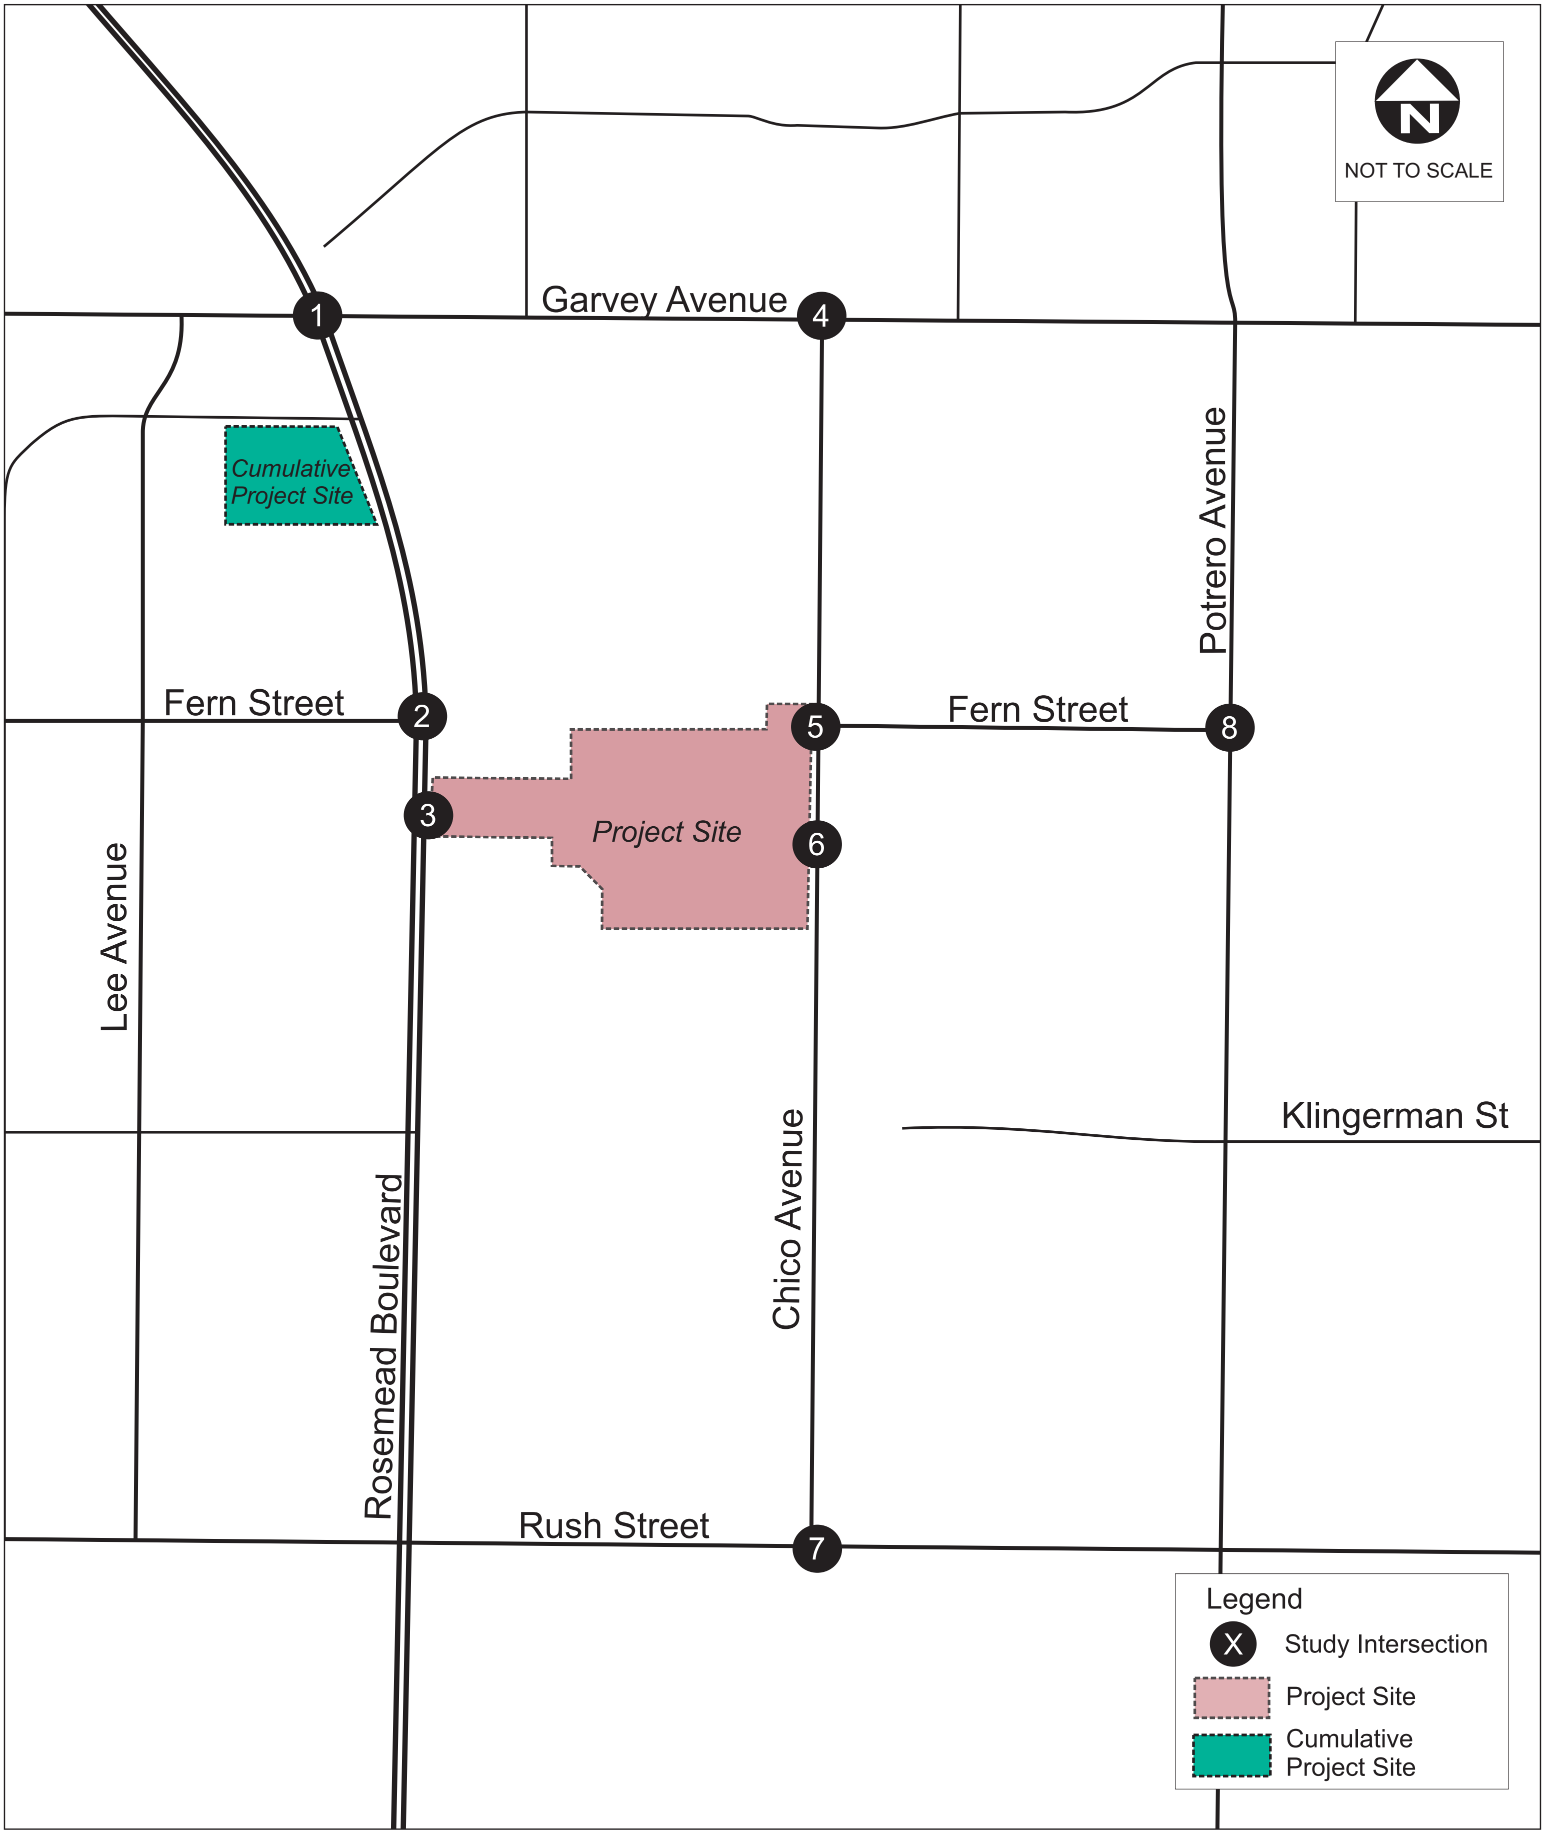
Figure 9
Existing Plus Project Intersection Volumes

7 OPENING YEAR 2023 WITHOUT PROJECT CONDITIONS

The project opening year is 2023. Therefore, this section analyzes opening year 2023 traffic conditions without the proposed project. Opening year 2023 without project traffic volumes were developed by considering traffic increases due to ambient growth and specific, planned, or approved development projects in the study area, without consideration of the proposed project.

7.1 Ambient Growth

Ambient traffic growth is the traffic growth that will occur in the study area due to general employment growth, housing growth and growth in regional through trips in Southern California. An ambient growth rate of one-quarter of one percent (.24%) per year in the study area was assumed based on model volume comparisons between 2018 and 2040 using the SCAG model network.



7.2 Cumulative Project Growth

Cumulative project traffic growth is growth due to specific, known development projects in the area surrounding the study locations that may affect traffic circulation. Details regarding the sole cumulative, approved project within the region were provided by the City of South El Monte and shown in **Table 8**. The general location of this cumulative project is shown in **Figure 10**. The peak hour vehicle trips expected to be generated by this development are shown in **Figure 11**. Trip distribution for the cumulative project was assigned based on the development's concurrent uses and its location with respect to nearby freeways and major arterials.

Table 8: Cumulative Project

Location		Land Use	Size/Description
1	Mye Plaza Development (Rosemead Blvd & Mabel Ave – SW corner)	Mixed-Use	73 du 3.180 tsf restaurant 13.620 tsf retail

Note: du = dwelling unit, tsf = thousand square feet

Cumulative Project Location

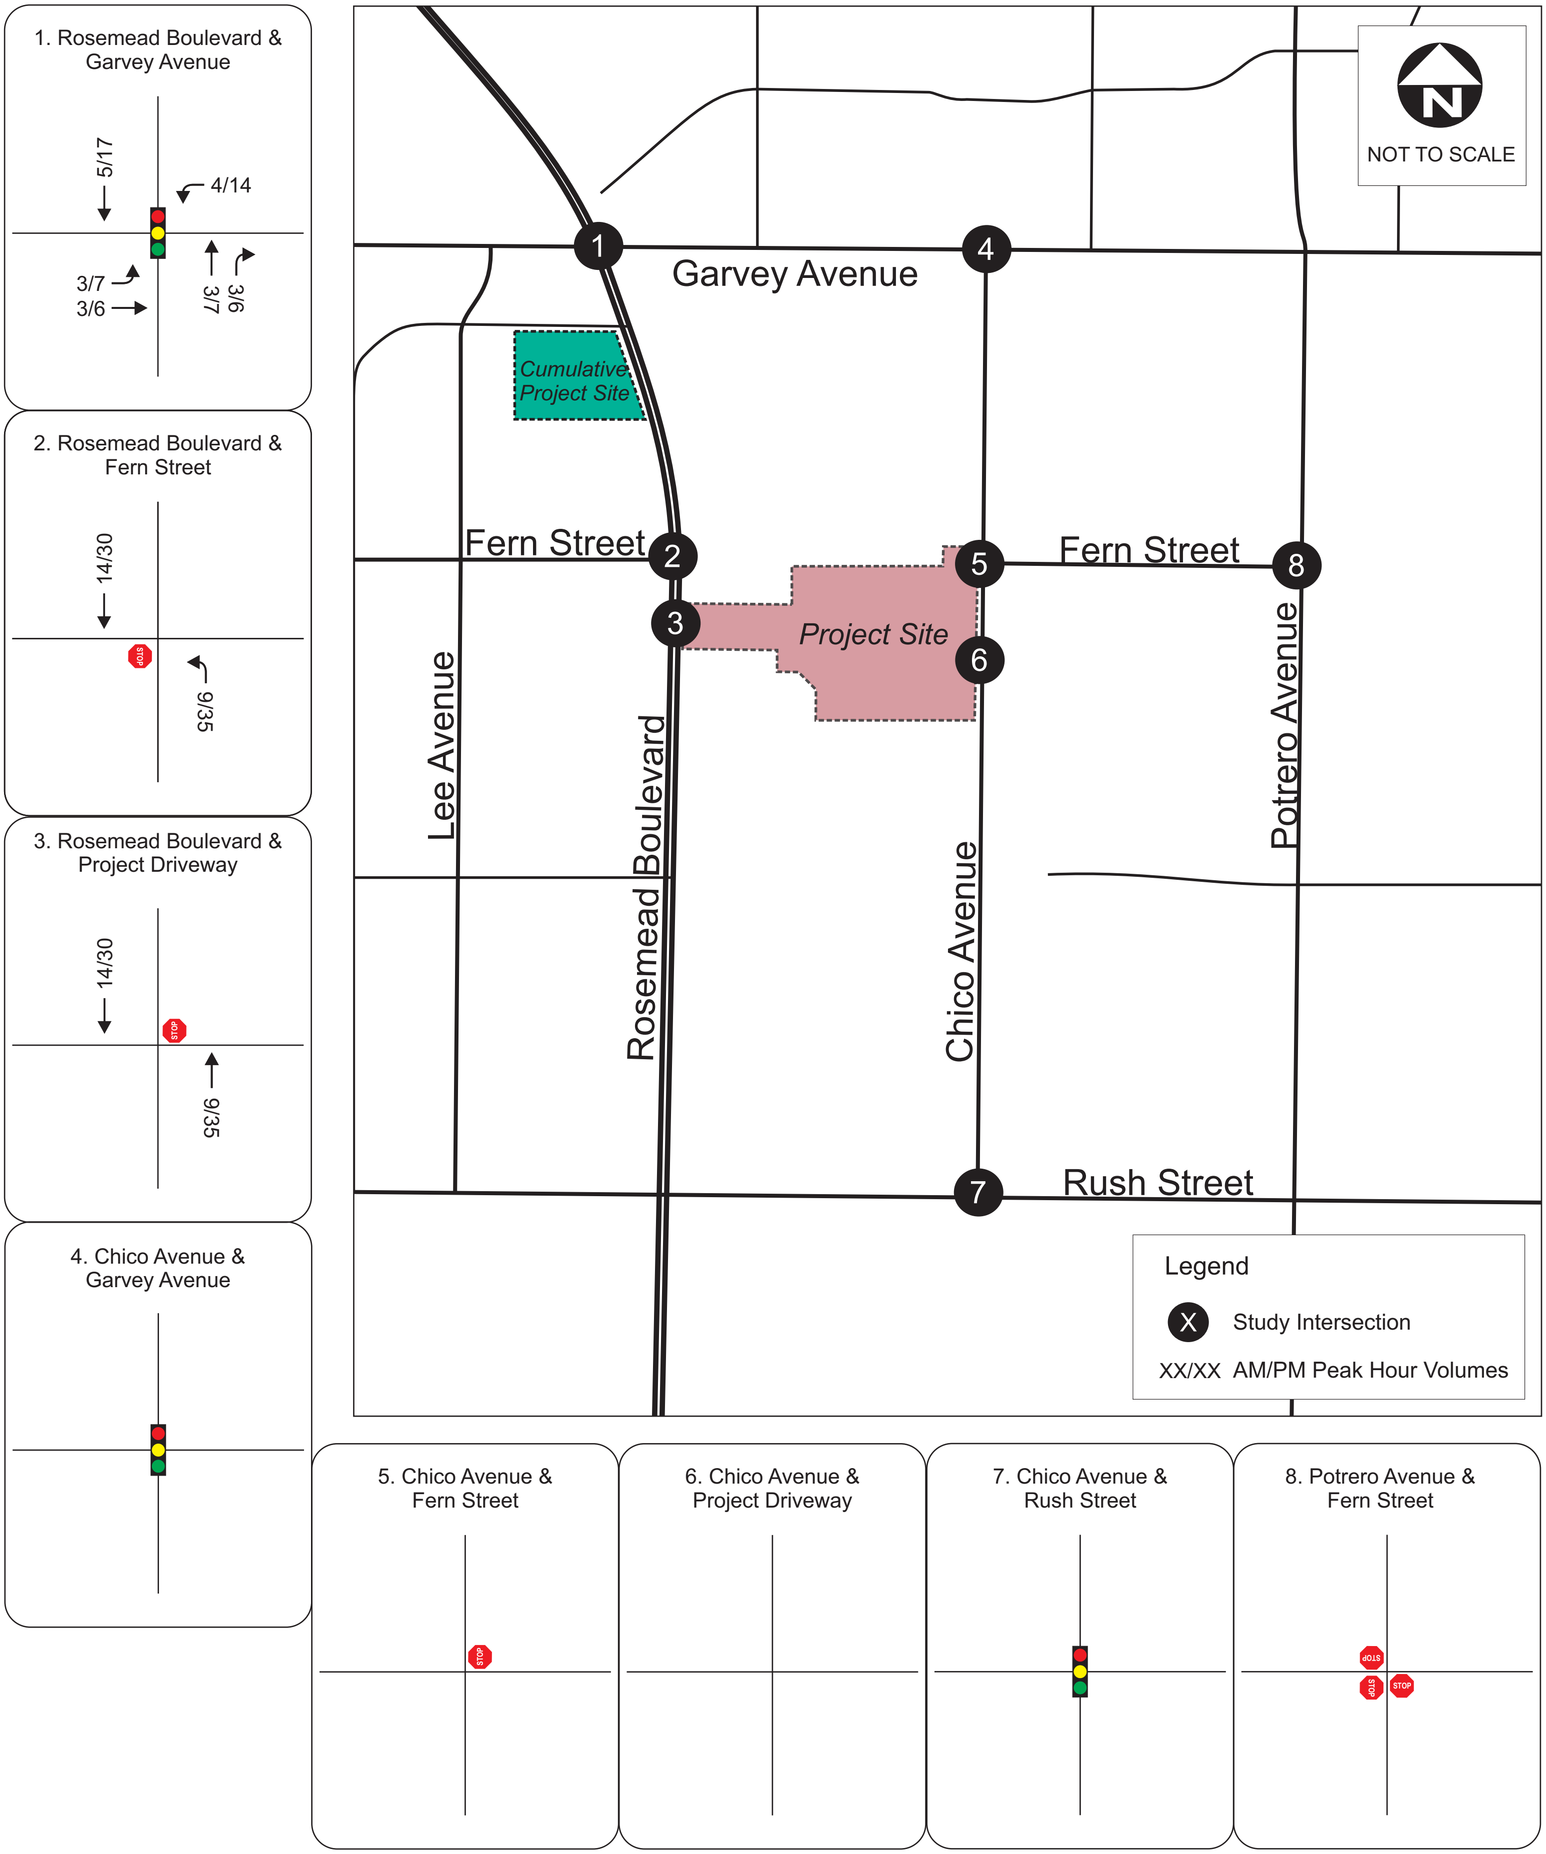

Figure 11
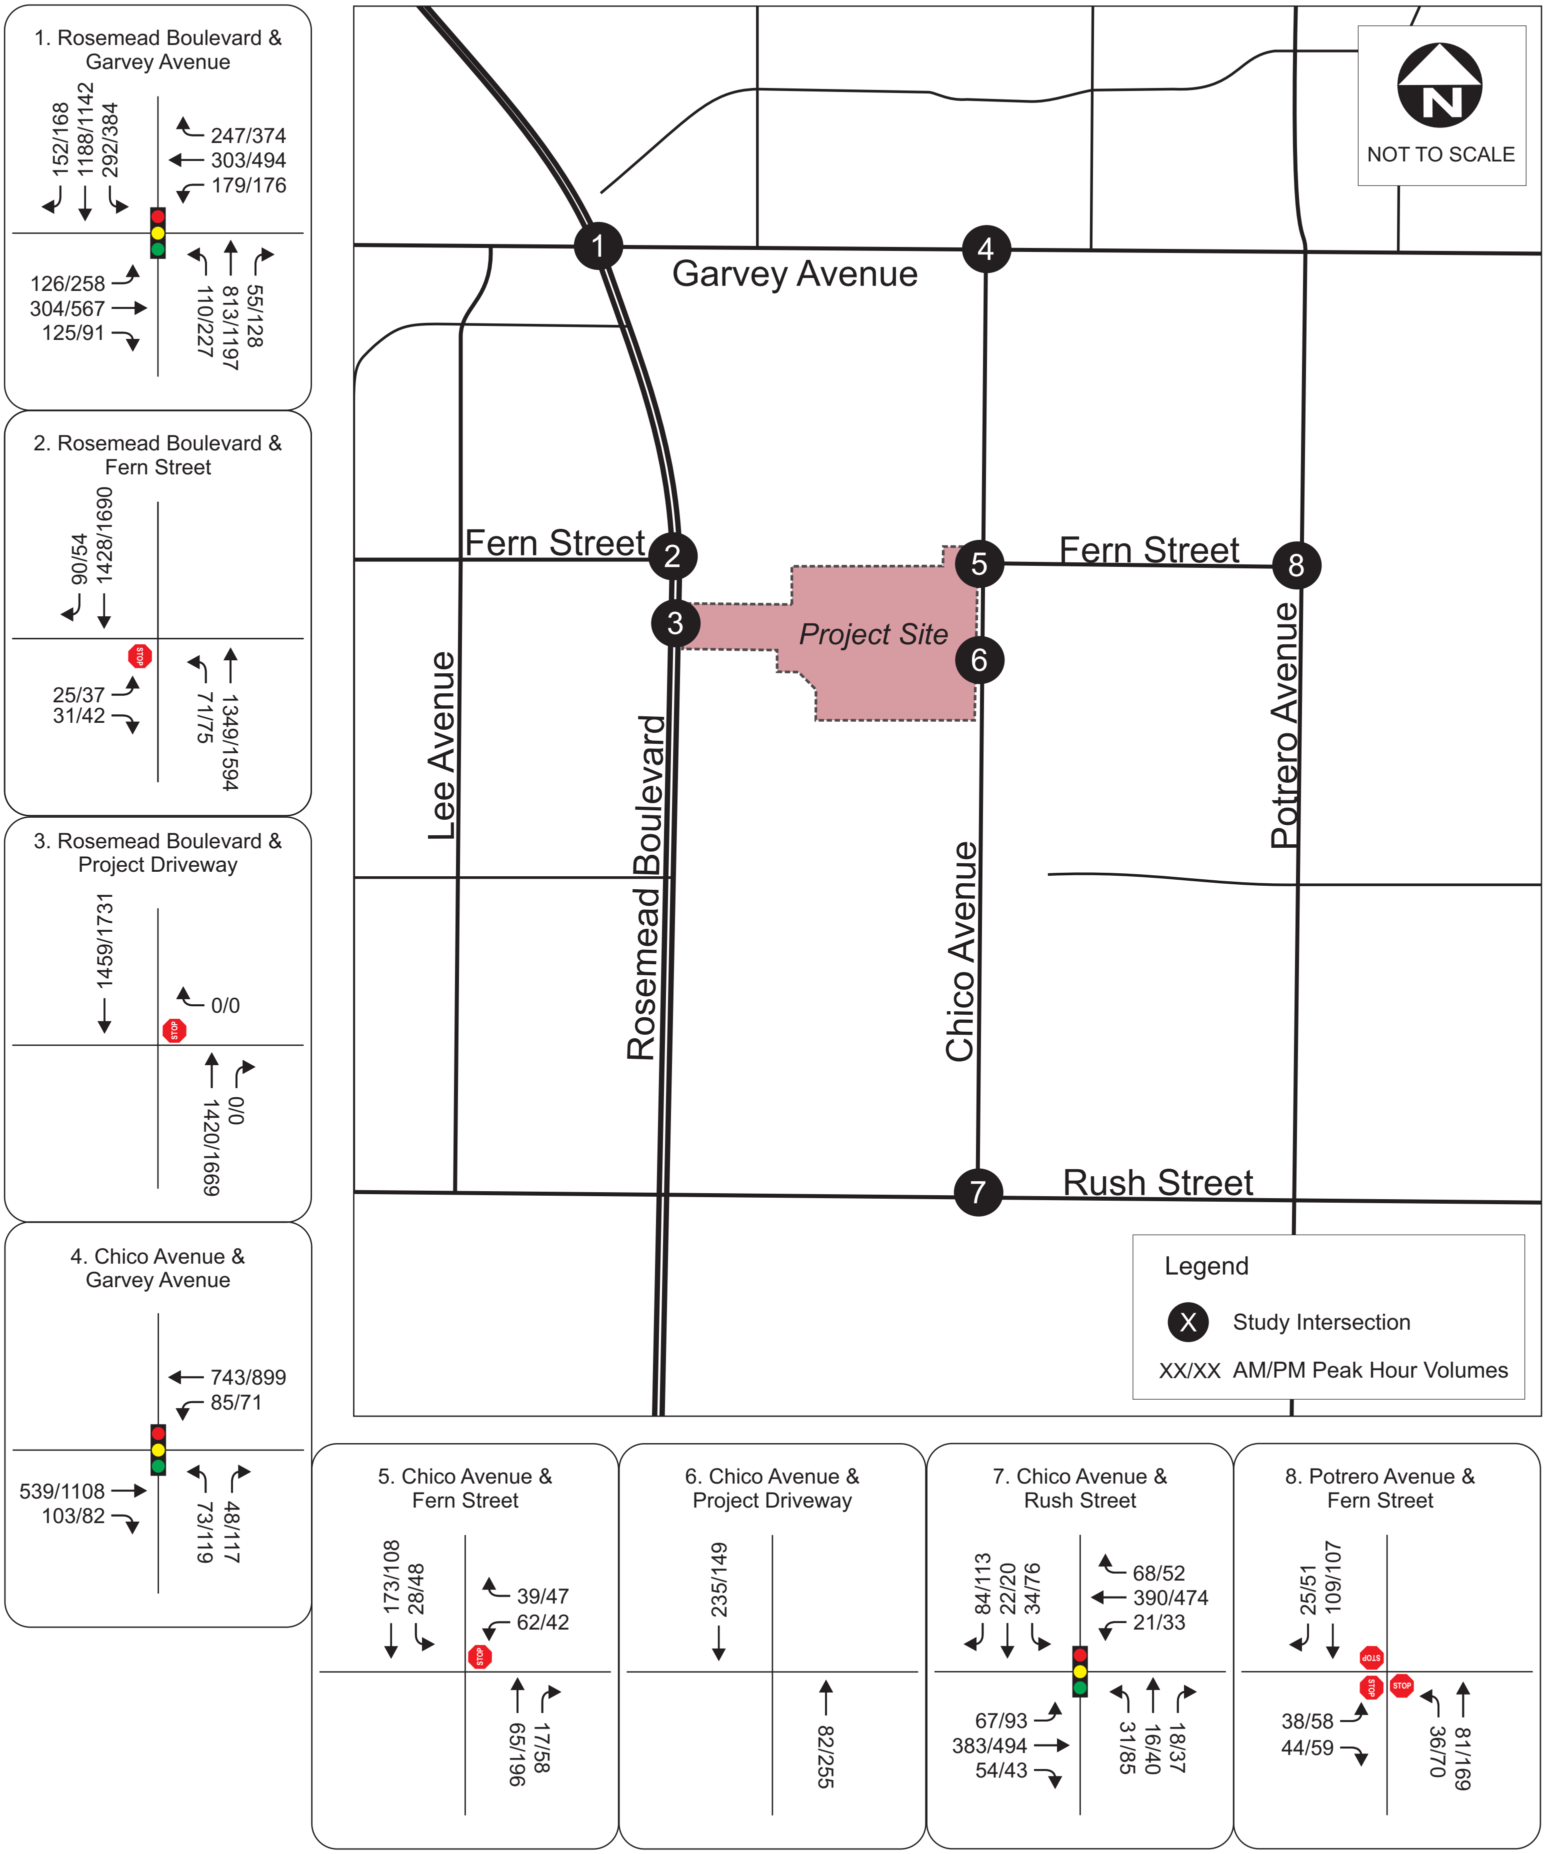
Cumulative Project Trip Assignment

7.3 Opening Year 2023 Without Project Intersection Levels of Service



A level of service analysis was conducted to evaluate opening year 2023 without project intersection operations during the AM and PM peak hours. **Figure 12** shows the opening year 2023 without project peak hour volumes at the study intersections. **Table 9** summarizes the opening year 2023 without project levels of service at the study intersections. Level of service calculation worksheets are included in **Appendix B**.

Table 9: Opening Year 2023 Without Project Intersection Peak Hour Level of Service

	Intersection	Control Type	AM Peak Hour			PM Peak Hour		
			V/C	Delay (sec)	LOS	V/C	Delay (sec)	LOS
1	Rosemead Blvd / Garvey Ave	Signalized	0.77	-	C	**1.14**	-	**F**
2	Rosemead Blvd / Fern St	TWSC	-	**116.4**	**F**	-	**882.0**	**F**
3	Rosemead Blvd / Project Dwy	TWSC	-	0.0	A	-	0.0	A
4	Chico Ave / Garvey Ave	Signalized	0.48	-	A	0.71	-	C
5	Chico Ave / Fern St	TWSC	-	11.3	B	-	12.3	B
6	Chico / Project Dwy	Uncontrolled	-	0.0	A	-	0.0	A
7	Chico Ave / Rush St	Signalized	0.61	-	B	0.62	-	B
8	Potrero Ave / Fern St	AWSC	-	8.1	A	-	9.6	A

Notes: V/C = Volume to Capacity Ratio, LOS = Level of Service; TWSC = two-way stop-controlled; AWSC = all-way stop-controlled

As shown in **Table 9**, the unsignalized Rosemead Boulevard/Fern Street intersection is forecast to operate at LOS F during the AM and PM peak hours in opening year 2023 without project, with significant delay incurred from trips forecasted to accompany the Mye Development cumulative project. Additionally, the signalized Rosemead Boulevard/Garvey Avenue intersection is forecast to continue to operate at LOS F during the PM peak hour.

City of South El Monte
Starlite Development
Traffic Impact Analysis

Figure 12
Opening Year Without Project Intersection Peak Hour Volumes

8 OPENING YEAR 2023 WITH PROJECT CONDITIONS

Opening year 2023 with project conditions were developed by adding trips forecast to be generated by the proposed project, as described in **Section 5**, to opening year 2023 without project volumes, as described in **Section 7**. **Figure 13** illustrates the opening year 2023 with project traffic volumes at the study intersections.

8.1 Opening Year 2023 With Project Intersection Levels of Service

A level of service analysis was conducted to evaluate opening year 2023 with project intersection operations during the AM and PM peak hours. Opening year 2023 with project levels of service at the study intersections are summarized in **Table 10.** Level of service calculation worksheets are included in **Appendix B**.

Table 10: Opening Year 2023 With Project Intersection Peak Hour Level of Service

	Intersection	Opening Year 2023 Without Project						Opening Year 2023 With Project						Change in V/C or Delay		Exceeds Threshold Due to the Project?
		AM Peak Hour			PM Peak Hour			AM Peak Hour			PM Peak Hour			AM Peak Hour	PM Peak Hour	
		V/C	Delay (sec)	LOS	V/C	Delay (sec)	LOS	V/C	Delay (sec)	LOS	V/C	Delay (sec)	LOS			
1	Rosemead Blvd / Garvey Ave	0.77	-	C	**1.14**	-	**F**	0.78	-	C	**1.14**	-	**F**	0.01	0.0	No
2	Rosemead Blvd / Fern St	-	**116.4**	**F**	-	**882.0**	**F**	-	**131.4**	**F**	-	**919.0**	**F**	15.0	37.0	No
3	Rosemead Blvd / Project Dwy	-	0.0	A	-	0.0	A	-	19.8	C	-	23.1	C	19.8	23.1	No
4	Chico Ave / Garvey Ave	0.48	-	A	0.71	-	C	0.48	-	A	0.75	-	C	0.0	0.04	No
5	Chico Ave / Fern St	-	11.3	B	-	12.3	B	-	11.7	B	-	13.2	B	0.4	0.9	No
6	Chico / Project Dwy	-	0.0	A	-	0.0	A	-	10.4	B	-	10.2	B	10.4	10.2	No
7	Chico Ave / Rush St	0.61	-	B	0.62	-	B	0.64	-	B	0.70	-	B	0.01	0.02	No
8	Potrero Ave / Fern St	-	8.1	A	-	9.6	A	-	8.1	A	-	9.6	A	0.0	0.0	No

Notes: V/C = Volume to Capacity Ratio, LOS = Level of Service.

As shown in **Table 10**, project trips forecast to be added to the unsignalized intersection Rosemead Boulevard/Fern Street will increase delay at this intersection due to some volume of project traffic assumed to exit the project site onto Rosemead Boulevard making a U-turn at the Rosemead Boulevard at Fern Street intersection to proceed southbound. With LOS F, this intersection currently already exceeds the City's target threshold for acceptable levels of service, however since the intersection does not degrade in level of service from the baseline scenario and the project does not contribute 2 percent or more traffic to the location it is not considered to exceed the threshold due to the project. While the signalized intersection of Rosemead Boulevard/Garvey Avenue also currently exceeds the city's threshold with LOS F in the PM peak hour, there is no additional delay incurred at this intersection due to forecast project trips.

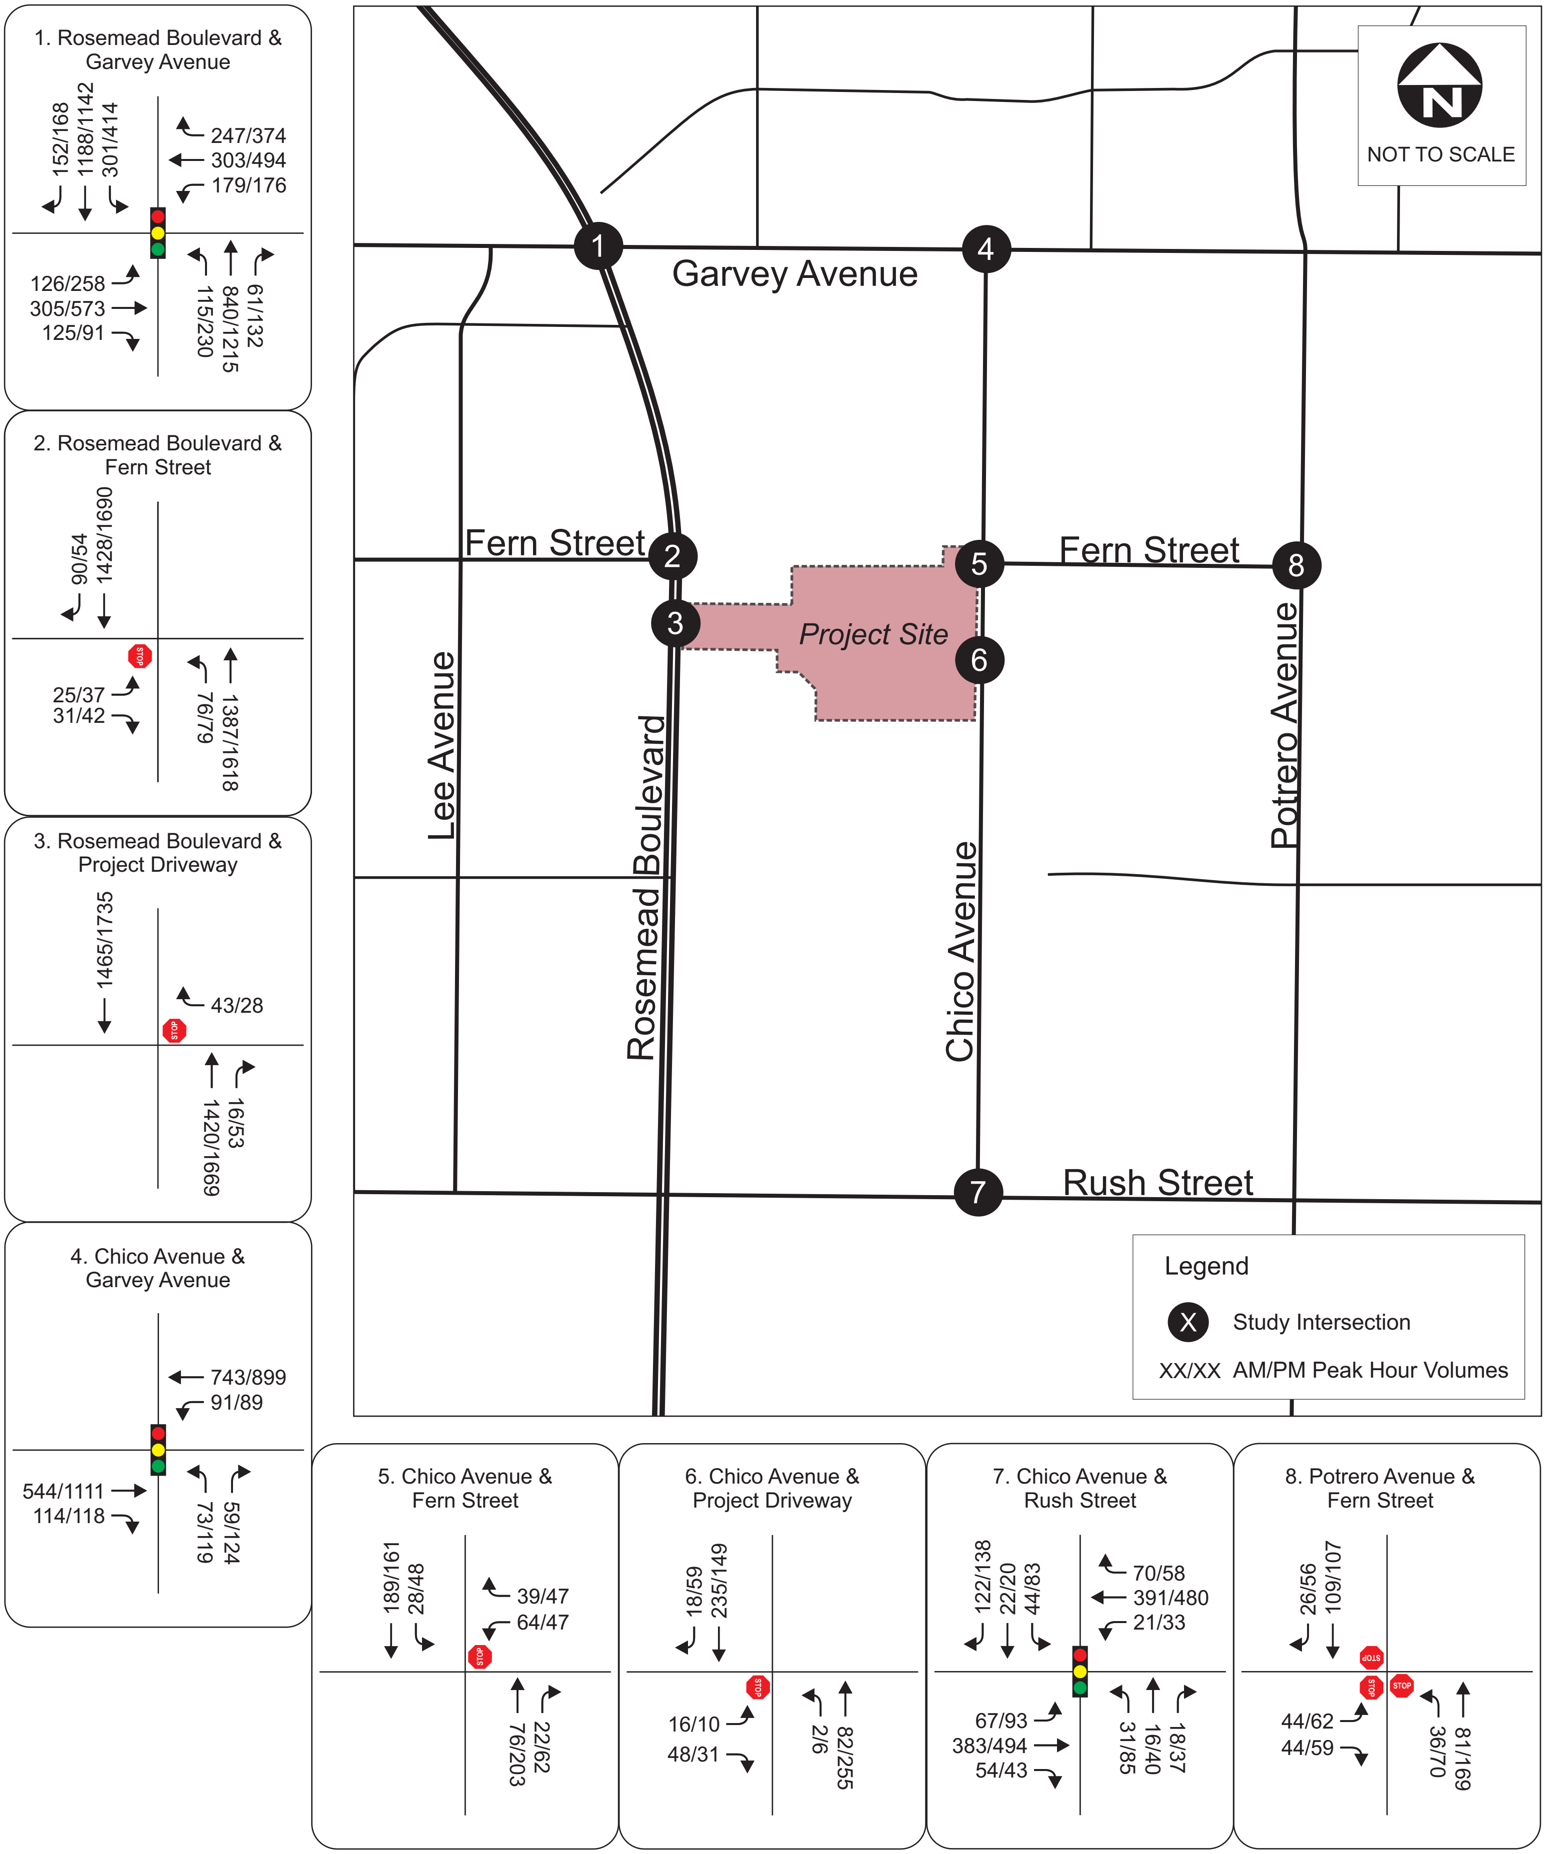


Figure 13
Opening Year 2023 With Project Intersection Volumes

8.2 Deficient Intersections

The City's Transportation Study Guidelines state that any intersection operating at LOS E or F is considered to be deficient. If a project contributes two percent (2%) or more of the total traffic at an intersection that is expected to be deficient, improvements should be considered. Signalized intersections will typically require improvements if the addition of project traffic results in the degradation of intersection operations from LOS D or better to LOS E or F and will increase the V/C ratio by .01 or more. Furthermore, unsignalized intersections will require improvements if the addition of project traffic to an intersection results in the degradation of any individual movement at the intersection from LOS D or better to LOS E or F and the intersection meets peak hour signal warrants per the latest California Manual on Uniform Traffic Control Devices (CA MUTCD).

The only signalized intersection considered deficient is the Rosemead Boulevard/Garvey Avenue intersection, which operates at LOS E or F during the PM peak hour in every scenario examined. However, as mentioned, in both the Existing Plus Project and Opening Year 2023 With Project scenarios, the addition of project traffic to the intersection led to no increase in delay experienced at this intersection.

The unsignalized intersection of Rosemead Boulveard/Fern Street also operates at LOS E or F during both the AM and PM peak hours of each scenario examined and is thus considered deficient. This is due to delay from the eastbound and northbound left turn movements crossing the free-flow Rosemead Boulevard. A comparison of LOS for the eastbound and northbound left turn movements between with and without project scenarios is shown in **Table 11**. Level of service worksheets are available in **Appendix B**.

Table 11: Rosemead Blvd/Fern Street Peak Hour Level of Service Comparison

			Delay	**LOS**	**Delay**	**LOS**	**Delay**	**LOS**	**Delay**	**LOS**		
2	Rosemead Blvd / Fern St (EB)	TWSC	**116.4**	**F**	**882.0**	**F**	**131.4**	**F**	**919.0**	**F**	15.00	37.00
2	Rosemead Blvd / Fern St (NBL)	TWSC	32.6	D	**54.7**	**F**	33.6	D	**57.3**	**F**	1.00	2.6

As shown in **Table 11**, the eastbound movement at the Rosemead Boulevard/Fern Street intersection operates at LOS F during both the AM and PM peak hours for each scenario examined. While the addition of project traffic to this intersection does increase delay for this leg, no project trips were added to this movement. Meanwhile, the northbound left turn movement operates at LOS D during the AM peak hour for all scenarios and at LOS E during the PM peak hour for the Existing and Existing Plus Project scenarios and at LOS F during the PM peak hour for the Opening Year 2023 scenarios. While the addition of project trips to this movement did increase delay, in no scenario did intersection operations degrade from LOS D or better to LOS E or F. Furthermore, the volume of project trips added to this intersection, 43 during the AM peak hour and 27 during the PM peak hour, does not exceed two percent (2%) of total intersection traffic in either of the With Project scenarios examined. Therefore, due to the above factors, this intersection does not require improvements due to project traffic according to the City's Guidelines.

9 PROJECT SITE CONSIDERATIONS

In addition to traffic operations in the surrounding roadway network and project intersections, other particular considerations related to the project site concerning issues such as potential vehicle stacking, queuing, line of sight, truck access, parking, and pedestrian safety were analyzed as part of this traffic study and described in this section.

9.1 Project Parking vs Code Requirements

According to the site plan provided by the developer, the Starlite development will offer 414 private parking spaces, with each unit having its own two-car garage, in addition to 104 onsite guest parking stalls distributed along interior project driveways, and 10 overflow parking stalls over a Los Angeles County flood control easement.

According to Chapter 17.60 of the City of South El Monte Municipal Code, the off-street parking requirement for single-family dwellings is two standard spaces within a garage, while for multiple dwellings, it is two standard spaces per dwelling unit with a garage, plus one guest parking space for every four units. Thus, available parking spaces for the project far exceed the minimum code requirements, with over 100 more parking spaces than required.

9.2 Rosemead Bouelvard/Project Driveway

As shown in the level of service analysis, the current right-in, right-out configuration would adequately accommodate project site traffic. However, it is worth considering that this configuration will likely result in some project trips making U-turns at the Rosemead Boulevard/Fern Street intersection, which would add trips to the critical northbound left turn movement that already exceeds the City's operational threshold in the PM peak hour. However, as mentioned in **Section 8** the project would not contribute more than two percent (2%) to total traffic at the intersection and therefore would not be considered to significantly contribute to the threshold exceedance.

A break in the median along Rosemead Boulevard at the intersection with the Project Driveway would add southbound and westbound left-turn access to and from the project site, increasing overall access to the site from the west and ameliorating any added project trips to the northbound left turn movement at the already deficient Rosemead Boulevard/Fern Street intersection. To investigate the impacts this would have on traffic operations, additional analysis was performed adding a dedicated southbound left turn lane with a storage capacity of 80 feet as well as a westbound left turn movement at this intersection, considering both an unsignalized and a signalized intersection. The proposed trip distribution for these scenarios with changes to the Rosemead Boulevard/Project Driveway intersection, reflecting greater access to the project site, is shown in **Figure 14**.

Levels of service with changes made to the Rosemead Boulevard/Project Driveway intersection, both unsignalized and signalized, are summarized in **Table 12** for both Existing Plus Project and Opening Year 2023 with project conditions**.** Level of service calculation worksheets for these alternatives are included in **Appendix C**.

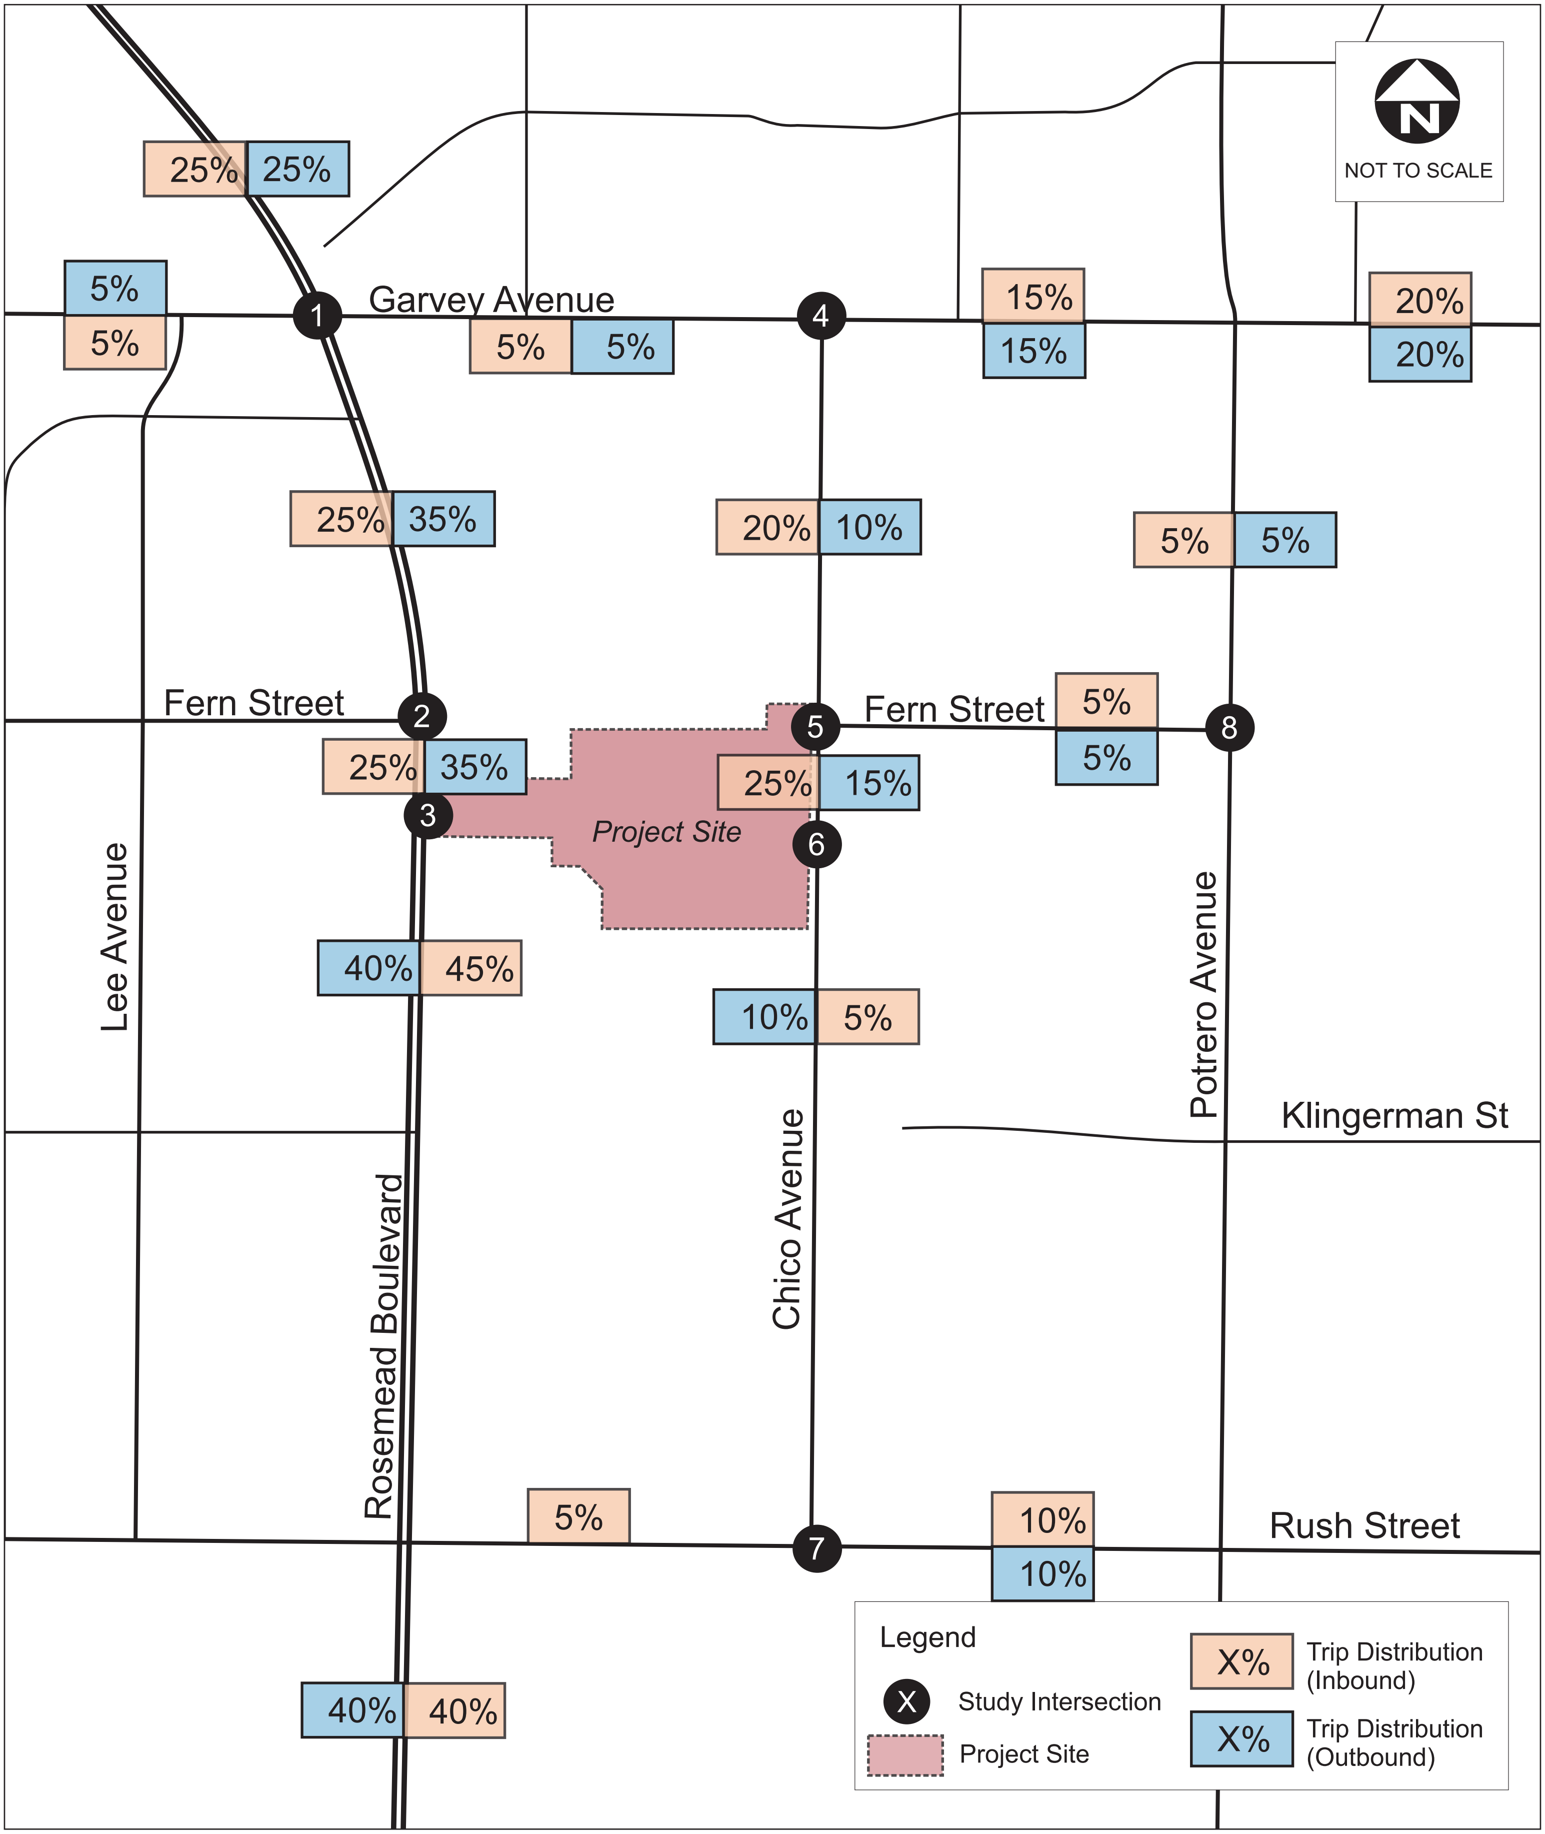

Figure 10
Project Trip Distribution
With Changes to Rosemead Boulevard

Table 12 – Opening Year 2023 With Project With Changes to Rosemead Blvd/Project Dwy Peak Hour Level of Service

#	Intersection Location	Control	Existing Plus Project						Opening Year 2023 With Project					
			AM Peak Hour			PM Peak Hour			AM Peak Hour			PM Peak Hour		
			V/C	Delay	LOS	V/C	Delay	LOS	V/C	Delay	LOS	V/C	Delay	LOS
3	Rosemead Blvd / Project Dwy	TWSC	**-**	**110.3**	**F**	**-**	**242.3**	**F**	-	**117.3**	**F**	-	**269.0**	**F**
3	Rosemead Blvd / Project Dwy	Signalized	0.41	-	A	0.46	-	A	0.41	-	A	0.47	-	A

Note: TWSC: Two-Way Stop-Controlled.

As shown in **Table 12**, if left unsignalized, the Rosemead Boulevard/Project Driveway intersection would exceed the operations threshold laid out in the City's Guidelines due to delay incurred by the westbound left turn movement, rendering the intersection deficient. Therefore, the signalization of the project driveway would provide the best area operational benefits with the proposed project condition. Additionally, this scenario could provide for bicycle and pedestrian crossings on Rosemead Boulevard. Currently, the closest signalized crossings for bicycles and pedestrians are approximately 2,400 feet to the south at Rush Street and 1,500 feet to the north at Garvey Avenue.

Rosemead Boulevard is California State Highway 164 and is owned by Caltrans. Caltrans partners with the City to enact modifications to the roadway and full relinquishment to the City is under consideration. Any physical or operational changes to Rosemead Boulevard would need to proceed through the Caltrans process.

9.3 Chico Avenue/Project Driveway

A queue analysis of the northbound left turn movement at the Chico Avenue/Project Driveway intersection. However, due to the low peak hour project traffic volumes forecast for this movement at this intersection – two (2) vehicles in the AM peak hour and six (6) vehicles in the PM peak hour, delay related to northbound left-turning vehicles is not anticipated to be an issue at this intersection. Furthermore, given the absence of a dedicated northbound left-turn lane, delay and intersection LOS are more valuable metrics for this intersection when measuring project impacts.

If northbound left-turning vehicles remain a concern, Chico Avenue has a width of approximately 40 feet, more than wide enough to accommodate northbound through vehicles maneuvering around northbound left-turning vehicles. However, this would require parking restrictions near the project driveway on the northbound side of Chico Avenue. To accommodate vehicles passing two stacked northbound left-turning vehicles with an average length of 20 to 25 feet each, parking should be restricted on the northbound side of Chico Avenue for at least one car length on either side of these vehicles, or 100 feet total.

9.4 Vehicle Stacking at Project Driveways

An investigation into vehicle stacking accommodation at project driveways was requested to ensure that there is adequate room for more than one vehicle entering or exiting the project site at the same time from each driveway.

The Rosemead Boulevard project driveway is approximately 240 feet in length between the intersection with Rosemead Boulevard and the site access gate, including a turnaround that provides 32 feet of width for fire trucks entering the project site. Considering an average vehicle length of 20 to 25 feet, this driveway provides more than enough room for multiple vehicles to stack while entering or exiting the project site at the same time.

The Chico Avenue project driveway is approximately 120 feet in length between the intersection with Chico Avenue and the site access gate, including a turnaround that provides 26 feet of width in either direction. Again considering the average vehicle length of 20 to 25 feet, there is adequate room for vehicles to stack while entering and exiting the project site at the same time.

9.5 Line of Sight at Project Driveways

Adequate line of sight must be provided at uncontrolled intersections both for vehicles to safely exit the project site and for through vehicles traveling on the roadway intersecting the site to have adequate distance to stop in the event a vehicle suddenly pulls out in front of them. Adequate stopping sight distance is calculated using sum of two distances, which together factor in roadway design speed, break reaction time, and an assumed deceleration rate:

1. The distance traversed by the vehicle from the instant the driver sights an object necessitating a stop to the instant the brakes are applied (brake reaction distance), and;
2. The distance needed to stop the vehicle from the instant brake application begins (braking distance).

The American Association of State Highway and Transportation Officials (AASHTO) has created a table using this formula to simplify the determination of stopping sight distance, seen below in **Table 13**.

Table 13 – AASHTO Guidelines Stopping Sight Distance (15 MPH to 45 MPH)

Design Speed (mph)	Brake Reaction Distance (ft)	Braking Distance on Level (ft)	Stopping Sight Distance	
			Calculated (ft)	Distance (ft)
15	55.1	21.6	76.7	80
20	73.5	38.4	111.9	115
25	91.9	60.0	151.9	155
30	110.3	86.4	196.7	200
35	128.6	117.6	246.2	250
40	147.0	153.6	300.6	305
45	165.4	194.4	359.8	360

Considering Rosemead Boulevard's speed limit of 45 mph and Chico Avenue's speed limit of 30 mph, using the stopping sight distance specified in **Table 13**, a stopping sight distance of 360 feet would be required at Rosemead Boulevard south of the project driveway and a stopping sight distance of 200 feet would be required at the Chico Avenue driveway. Current parking restrictions on Rosemead Boulevard extend at least 400 feet south of the project driveway, providing ample stopping sight distance for the intersection. However, existing parking on the west side of Chico Avenue north and south of the proposed project driveway would need to be restricted to ensure adequate stopping sight distance is provided.

9.6 Pedestrian Safety

Currently, the Chico Avenue/Fern Street intersection provides a marked pedestrian crosswalk on the north leg of the intersection crossing Chico Avenue and an unmarked crossing, denoted by curb ramps, on the east leg of the intersection crossing Fern Street. While pedestrian counts did not indicate any pedestrians crossing the intersection during the AM and PM peak hours, it is reasonable to assume that families with children will be occupying units in the proposed project and that these children would likely cross Chico Avenue at this crosswalk to access Potrero Elementary School. Currently, there is no advance warning signage alerting drivers to the presence of this crosswalk (California MUTCD Pedestrian W11-2), despite traffic along Chico Avenue being uncontrolled. The curb ramps on Chico Avenue are not aligned with the crosswalk and require pedestrians using the curb ramp to enter the intersection outside the crosswalk.

Current misaligned curb ramp configurations for crosswalk at Chico Avenue/Fern Street intersection.

9.7 Truck Access

To determine adequate truck access to the project site for garbage collection, SU-40 truck turning templates were analyzed over the proposed project site conditions using Autoturn software to ensure that adequate turning radii was available entering, within, and exiting the project site at each driveway. Images of these analysis are available for right turns into and out of the project site and alleys in **Figure 15** and **Figure 16**, respectively, and for left turns into and out of the project site and alleys in **Figure 17** and **Figure 18**, respectively.

While there were no issues encountered with any of the left turn-movements, most right-turn movements require the trucks to encroach into the opposing lane in order to properly make the turns due to small curb radii leading into and out of the alleys, roadway widths, and presence of on-street parking.

At the Chico Avenue/Project Driveway intersection, issues were detected with right-turn movements into and out of the project site. Entering the project site, driveway dimensions require the truck to swing slightly beyond the raised median before realigning within the lane, while exiting the project site, the truck will have to turn into the opposing northbound lane before maneuvering back into the southbound lane. These findings were shared with the applicants civil engineer and the site plan was altered to adjust the Chico Avenue driveway to:

- Widen the driveway from 26 feet to 30 feet west of the entrance island
- Moved the island nose two feet to the west
- Widen the driveway at Chico Avenue from 54 feet to 58 feet

These adjustments satisfy the results to the truck access analysis as shown

Figure 15 – Truck Turning Movements – Right Turns In

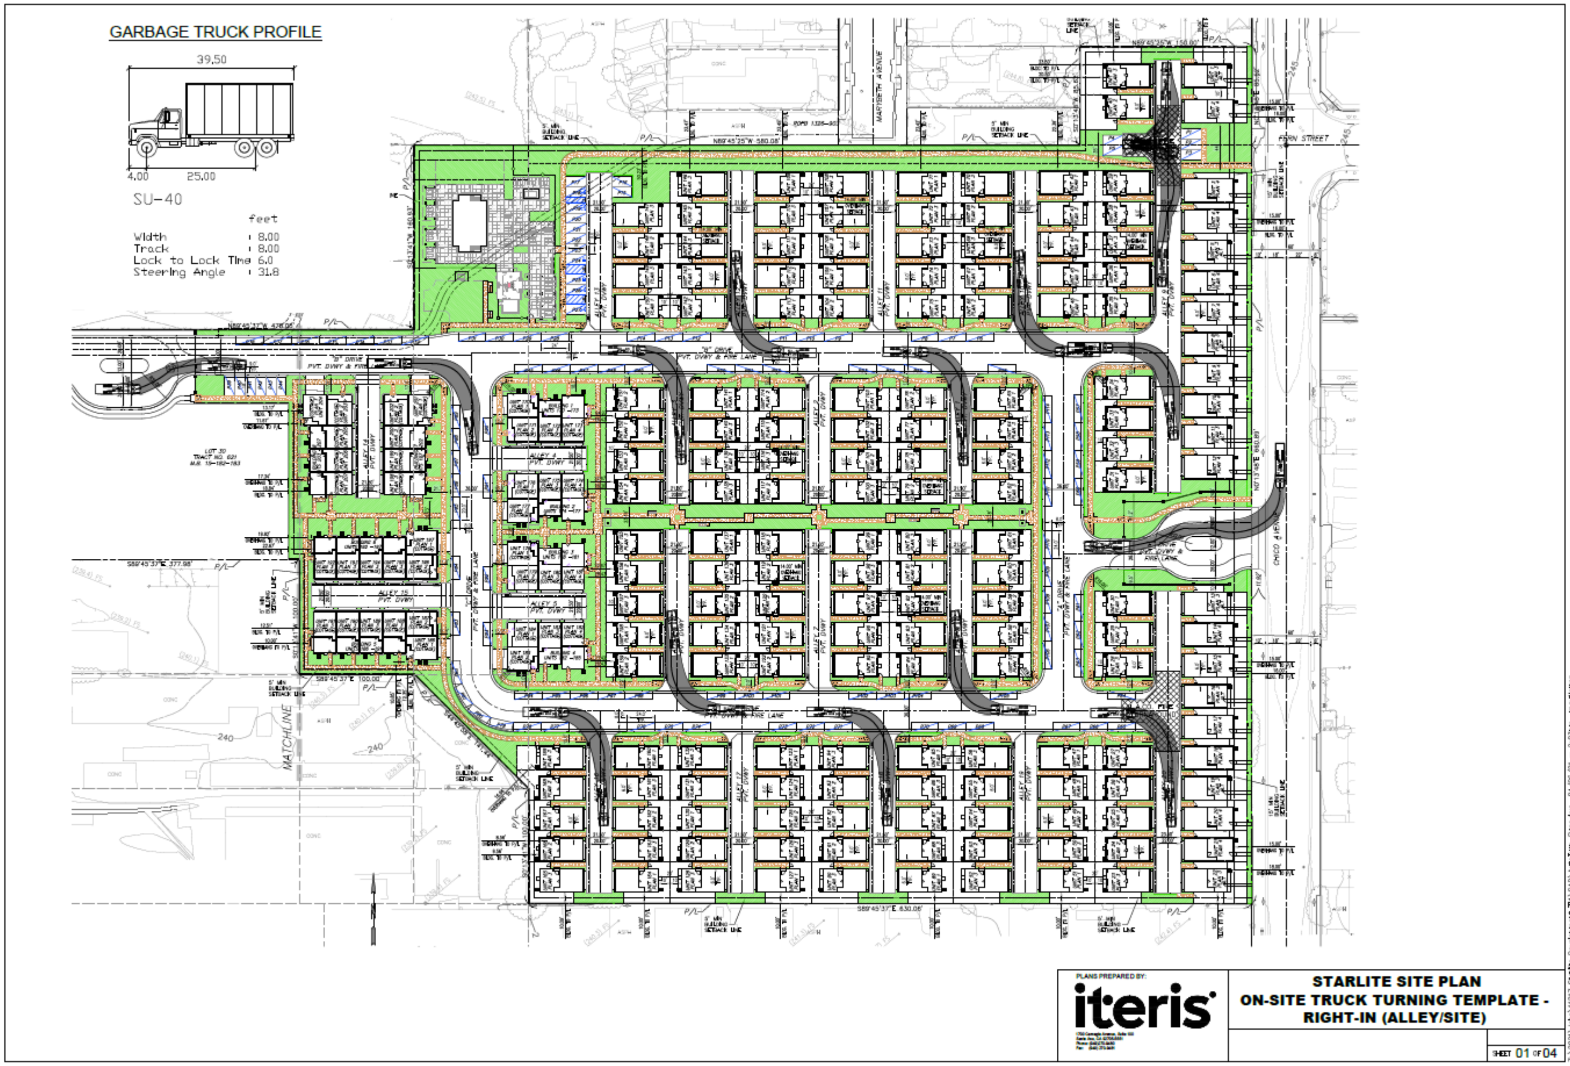

Figure 16 – Turck Turning Movements – Right Turns Out

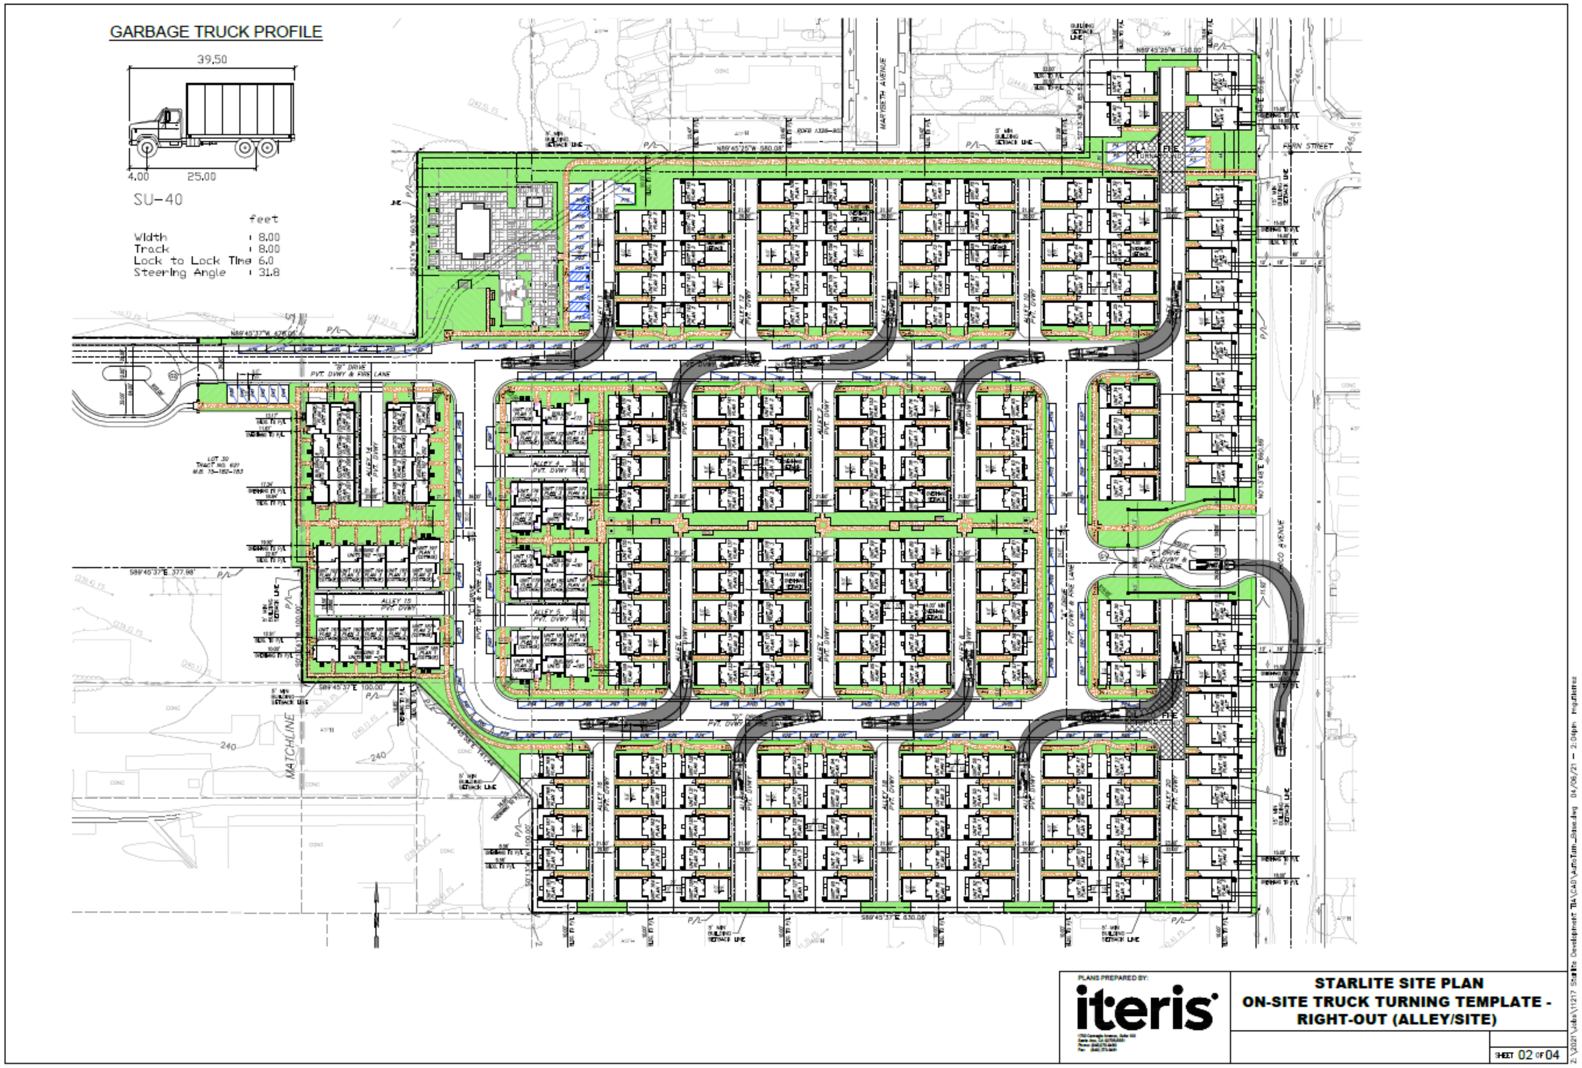

Figure 17 – Truck Turning Movements – Left Turns In

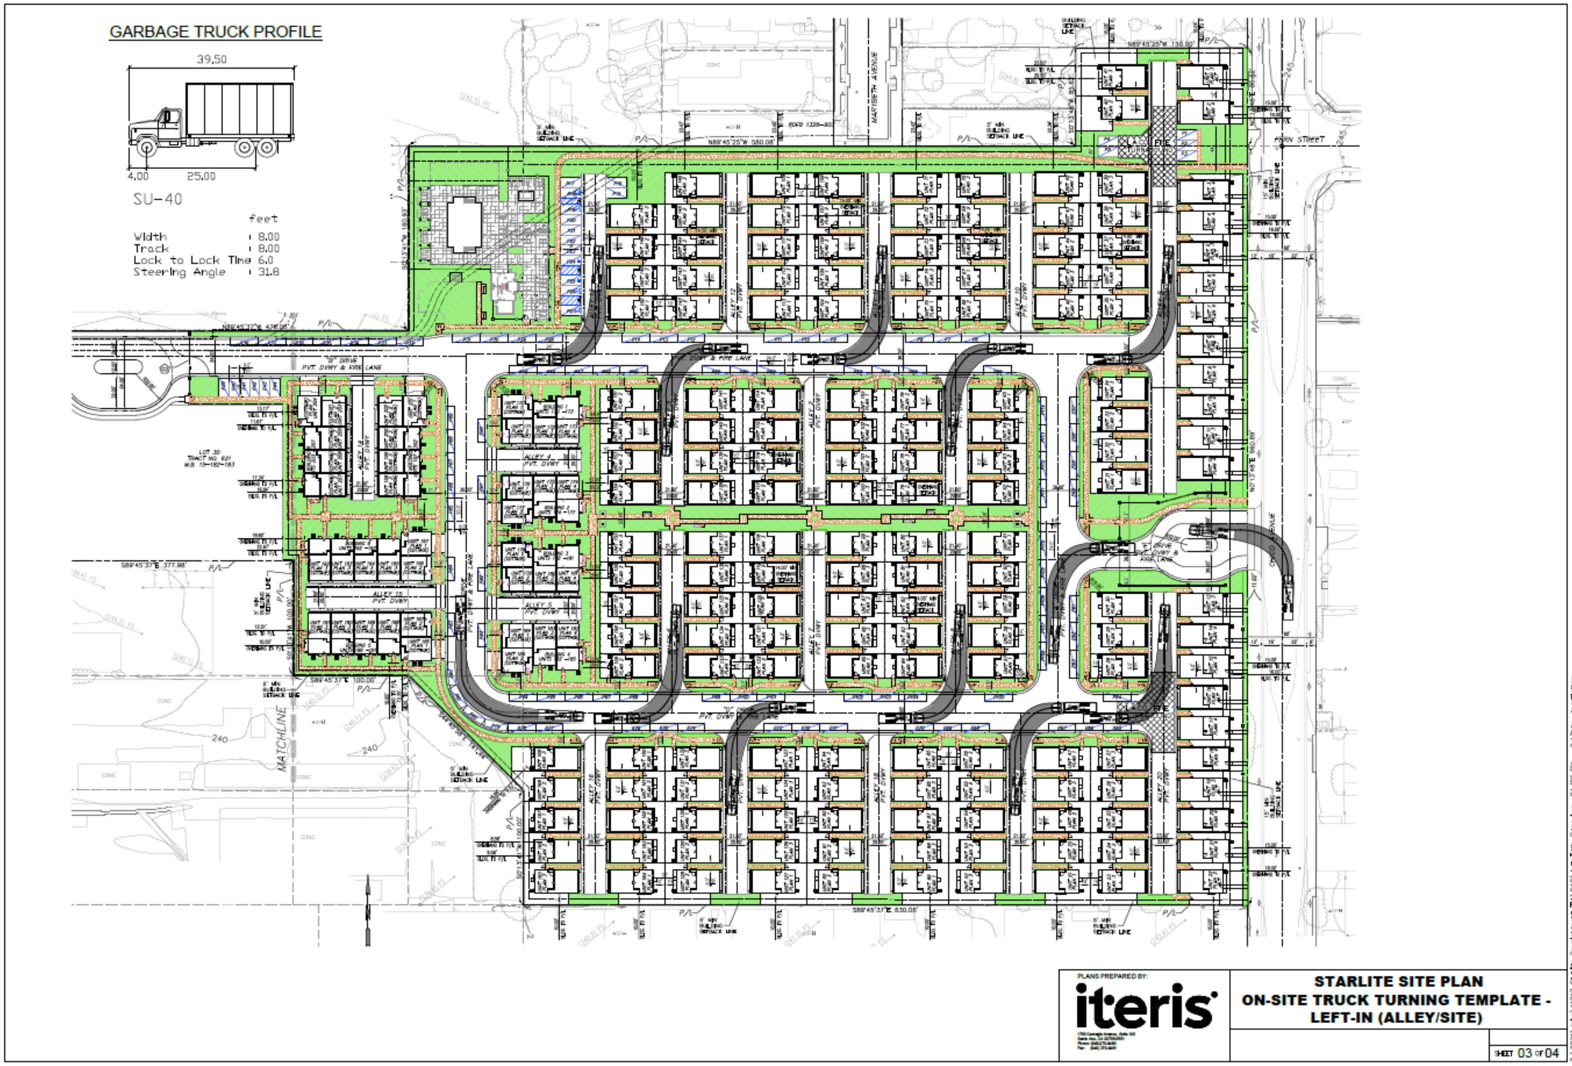

Figure 18 – Truck Turning Movements – Left Turns Out

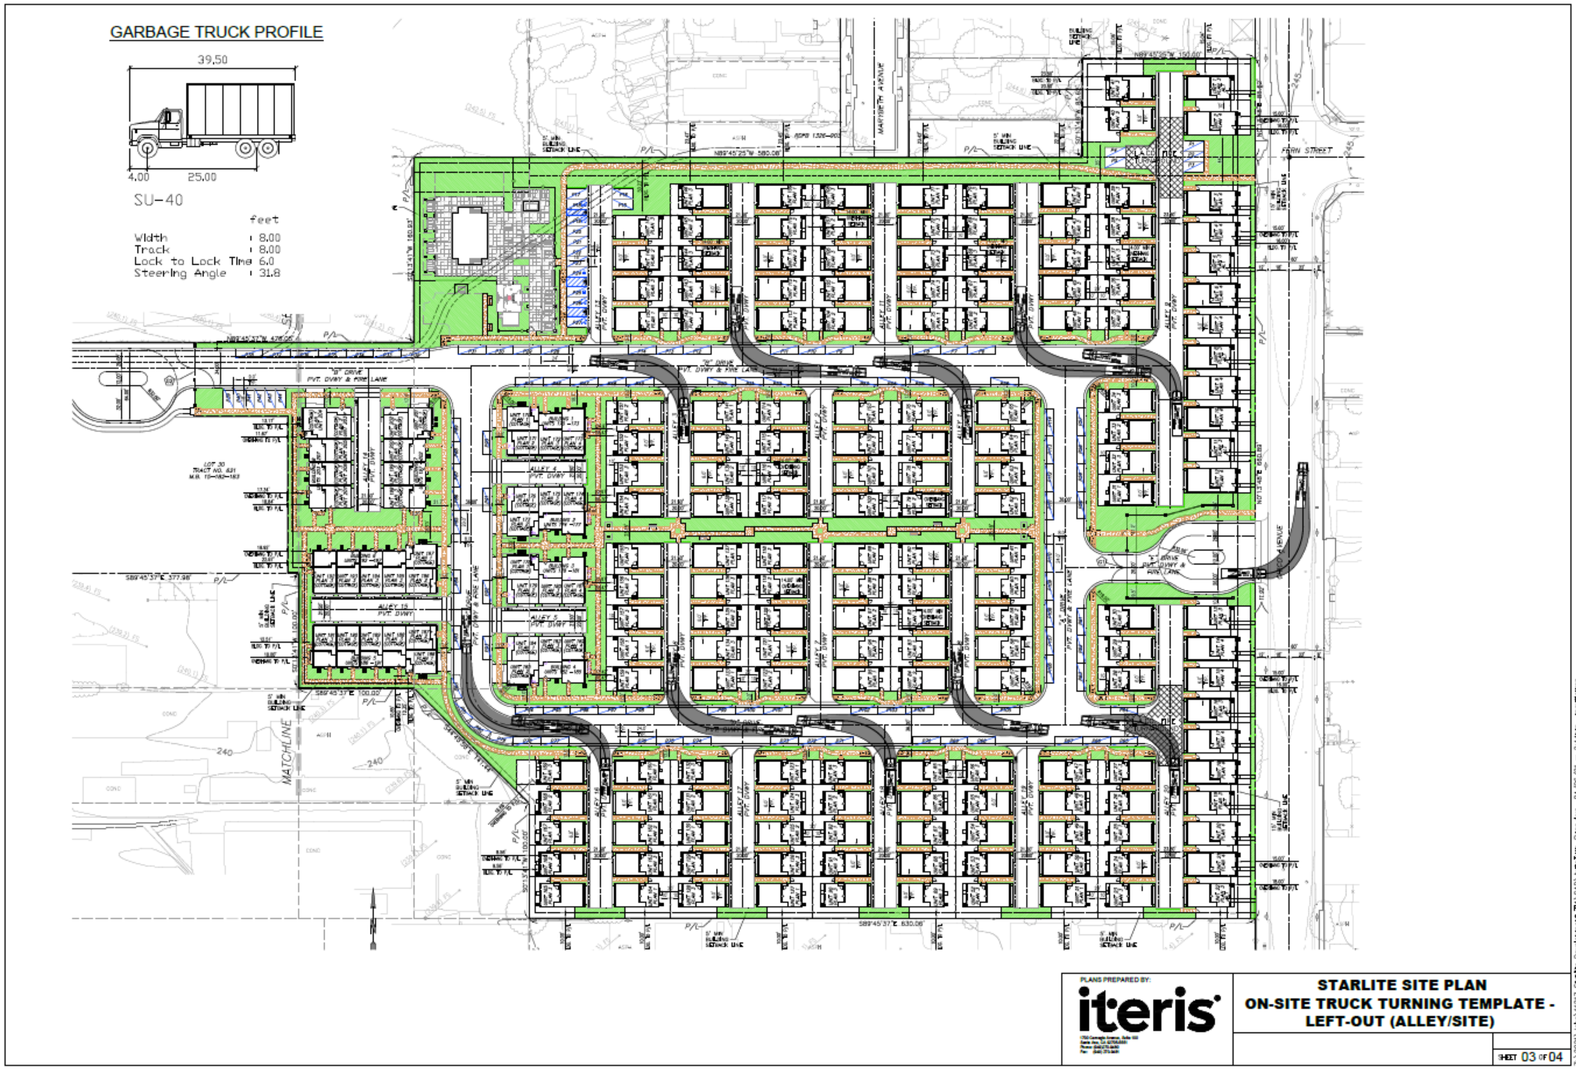

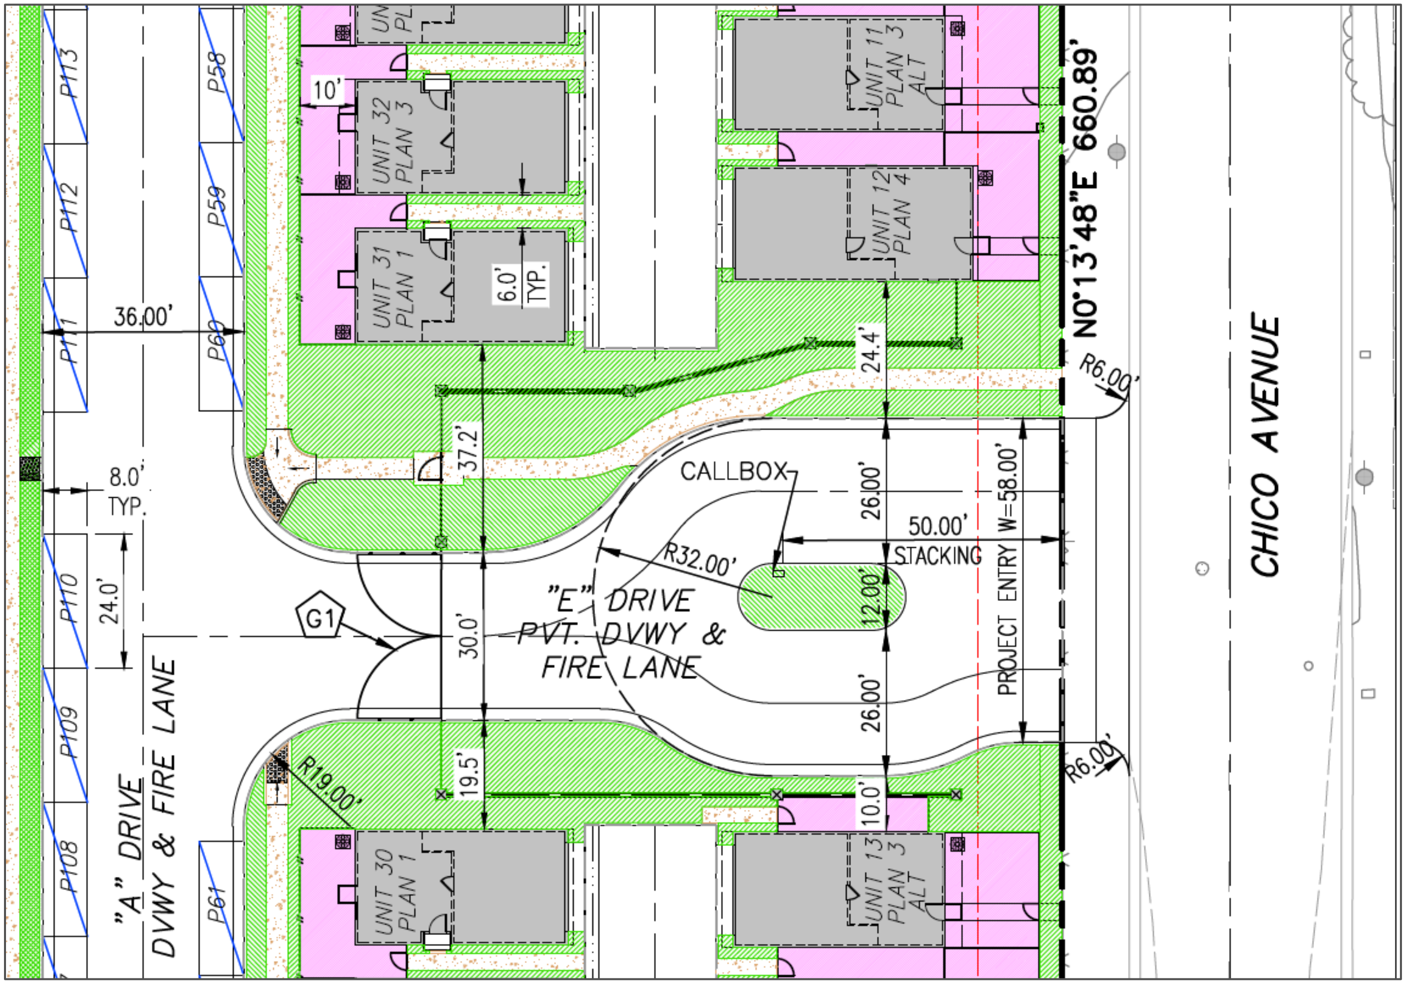

Figure 19 – Chico Avenue Driveway Revisions Based on Truck Access Analysis

10 CONSTRUCTION PERIOD

The contractor will prepare a construction traffic management plan that specifies the conditions under which the construction activities shall take place. The construction traffic management plan will specify details of any detours, coordination with emergency services and transit providers, coordination with adjacent property owners and tenants, advanced notification of temporary bus stop loss and/or bus line relocation, identification of temporary alternative bus routes, advanced notice of parking loss and replacement parking within a reasonable walking distance, use of designated haul routes and truck staging areas, observance of hours of operation restrictions, and appropriate signage for construction activities.

11 VMT ANALYSIS SCREENING ELIGIBILITY

CEQA analysis for determining potential significant transportation impacts from vehicle traffic transitioned from an automobile delay or capacity measure to a Vehicle Miles Traveled (VMT) of automobiles and light trucks metric in July 2020, as required by Senate Bill (SB) 743. VMT is an area-wide performance measure which helps compare the overall performance of a project or project alternatives and is also used as a metric to ultimately assess the transportation environmental impacts of a project. VMT analysis shifts the focus towards impacts caused by the distance traveled by vehicles rather than the localized congestion created by vehicles (i.e., intersection-level delay). VMT is generally calculated using a travel demand model that captures the movement of all trips over a highway network. Analysis is limited to automobile travel (automobiles and light-trucks) and excludes heavy trucks.

The City of South El Monte prepared City of South El Monte Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment (October 2020) that provide technical guidance regarding assessment of VMT, thresholds of significance, and mitigation measures for land development and transportation projects in the unincorporated area.

The Project would add housing in a predominately commercial and industrial area that is well-served by public transportation, thereby diversifying the land use types and contributing to a reduction in vehicle miles traveled per capita.

The Project was analyzed using the San Gabriel Valley Council of Governments Vehicle Miles Traveled Evaluation Tool for the three Project parcels (APNs: 8102-037-020, 8102-037-022, 8102-037-024) in traffic analysis zone (TAZ) 22195100. The Project is not located in a Transit Priority Area and would have a project generated VMT rate of 12.67 home-based VMT per capita. When compared to the City VMT baseline value of 15.75 home-based VMT per capita and the 15 percent below baseline significance value of 13.39, the proposed Project is presumed to have a less than significant impact as shown in **Figures 20** and **21**.

12 CONCLUSIONS

The proposed Starlite Development project, located at 2540 Rosemead Boulevard, consists of 207 residential units, with 38 multi-family housing units and 169 detached single-family housing units. The proposed project is forecast to generate 143 new AM peak hour trips, 189 new PM peak hour trips, and 937 new daily trips.

The signalized Rosemead Boulevard/Garvey Avenue intersection is forecast to operate at LOS F during the PM peak hour with project conditions, though is not forecast to incur additional delay from project trips. Therefore, this intersection will not require improvements due to project impacts per the City's Guidelines.

The unsignalized Rosemead Boulevard/Fern Street intersection currently operates at LOS F conditions and is projected to incur additional delay due to project trips. Delay at this intersection affects predominantly the eastbound left and northbound left turn movements. However, this added delay will not result in the degradation of any movement from LOS D or better to LOS E or F. Therefore, this intersection will not require improvements due to project impacts per the City's Guidelines.

Additional analysis of the project site and project site access resulted in the following conclusions:

- Parking provided by the project more than satisfies minimum off-street parking requirements in the City's Municipal Code.
- Consider improving project site access and avoiding additional project trips at the already deficient northbound left-turn movement at the Rosemead Boulevard/Fern Street intersection, consider signalizing the Rosemead Boulevard/Driveway intersection and adding southbound and westbound left-turn access. This will also allow for improved pedestrian/bicycle crossing opportunities.
- The peak hour volumes for the northbound left turn movement at Chico Avenue/Project Driveway are not forecast to cause delays, though parking restrictions should be enacted on a 100-foot stretch of Chico Avenue to ensure adequate room for northbound through traffic to pass two stacked left-turning vehicles.
- Both the Rosemead Boulevard and Chico Avenue project driveways contain enough space for stacking vehicles entering and exiting the project site.
- To ensure adequate line of sight for vehicles traveling along Chico Avenue and exiting the project site at Chico Avenue/Project Driveway intersection, it is recommended that restrictions be placed for on-street parking on the west side of Chico Avenue north and south of the project driveway.
- Additional signage warning vehicles approaching the Chico Avenue/Fern Street intersection about pedestrians crossing and repainting of the crosswalk along the north leg of the intersection are recommended to improve pedestrian safety. If possible, curb ramps on either side of Chico Avenue should be better aligned with the crosswalk.
- Garbage trucks will have adequate space to accommodate their turning radii for all left turns in and out of project driveways and alleys and right turns entering and exiting the project site at the Chico Avenue driveway had turning conflicts removed after altering the site plan to add to the driveway width and adjustment to the island median.

As discussed in **Section 10**, a construction traffic management plan will be provided by the contractor that will specify staging and hours.

As discussed in **Section 11**, this project is eligible for screening from a full VMT analysis.

MEMORANDUM

To:	JoAnn Hadfield Placeworks 3 MacArthur Pl # 1100, Santa Ana, CA 92707	**From:**	Sean Daly, AICP, PTP Iteris, Inc. 1700 Carnegie Avenue, Suite 100 Santa Ana, CA 92705
Date:	June 11, 2021		
RE:	**2540 Rosemead Boulevard - San Gabriel Valley Council of Governments Vehicle Miles Traveled Evaluation Tool Report**		

CEQA analysis for determining potential significant transportation impacts from vehicle traffic transitioned from an automobile delay or capacity measure to a Vehicle Miles Traveled (VMT) of automobiles and light trucks metric in July 2020, as required by Senate Bill (SB) 743. VMT is an area-wide performance measure which helps compare the overall performance of a project or project alternatives and is also used as a metric to ultimately assess the transportation environmental impacts of a project. VMT analysis shifts the focus towards impacts caused by the distance traveled by vehicles rather than the localized congestion created by vehicles (i.e., intersection-level delay). VMT is generally calculated using a travel demand model that captures the movement of all trips over a highway network. Analysis is limited to automobile travel (automobiles and light-trucks) and excludes heavy trucks.

The City of South El Monte prepared City of South El Monte Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment (October 2020) that provide technical guidance regarding assessment of VMT, thresholds of significance, and mitigation measures for land development and transportation projects in the unincorporated area.

The Project would add housing in a predominately commercial and industrial area that is well-served by public transportation, thereby diversifying the land use types and contributing to a reduction in vehicle miles traveled per capita.

The Project was analyzed using the San Gabriel Valley Council of Governments Vehicle Miles Traveled Evaluation Tool for the three Project parcels (APNs: 8102-037-020, 8102-037-022, 8102-037-024) in traffic analysis zone (TAZ) 22195100. The Project is not located in a Transit Priority Area and would have a project generated VMT rate of 12.67 home-based VMT per capita. When compared to the City VMT baseline value of 15.75 home-based VMT per capita and the 15 percent below baseline significance value of 13.39, the proposed Project is presumed to have a less than significant impact.

Finding: Low VMT Screening Analysis: Yes (Pass)

Attention: Mr. David Lelie

Subject: Geotechnical Investigation
Solemo 13 Acres
2540 Rosemead Boulevard
South El Monte, CA

Dear Mr. Lelie:

In accordance with your request, a geotechnical investigation has been completed for the proposed development at the above referenced property. The results of the investigation are presented in the accompanying report, which includes a description of site conditions, results of our field exploration and testing, laboratory testing, conclusions, and recommendations. This report has been prepared for specific application to this project, in accordance with generally accepted geotechnical engineering practice.

We appreciate this opportunity to be of service to you. If you have any questions regarding this report, please do not hesitate to contact us at your convenience.

Respectfully submitted,

RMA GeoScience

APPENDICES

PLATES

1.00 INTRODUCTION

1.01 Purpose

The purpose of the investigation was to summarize geotechnical and geologic conditions at the site and to assess their potential impact on the proposed development.

1.02 Scope of the Investigation

The general scope of this geotechnical investigation included the following:

- Review of published and unpublished geologic, seismic, groundwater, and geotechnical literature
- Examination of aerial photographs and topographic maps
- Review of State of California Alquist-Priolo Earthquake Fault Zone and Seismic Hazard maps
- Contacting of Underground Service Alert (USA) to locate onsite utility lines
- Logging, sampling, and backfilling of seven (7) hollow stem auger boring (9 inches diameter) to maximum depths of 50 feet and logging of nine (9) test pits dug with a backhoe to a maximum depth of 17 feet
- Conducting CPT's at three (3) locations to a maximum depth of 67 feet.
- Laboratory testing of representative soil samples
- Geotechnical evaluation of the compiled data
- provide a preliminary or narrow range estimate of the expected infiltration rate
- Preparation of this report presenting our findings, conclusions, and recommendations

Our scope of work did not include a preliminary site assessment for the potential of hazardous materials onsite.

1.03 Site Location and Description

The KB Home site is located at Rosemead Boulevard, in El Monte, California within a residential and commercial area. The 17 acre plus property includes Assessor Parcel Numbers 8102-037-020, 8102-037-021, 8102-037-001, 8102-035-017, 8102-029-025, 8102-029-007, 8102-029-006, 8102-029-005, 8102-029-026, 8102-029-019, & 8102-029-020. The site currently serves as a swap meet and drive in theatre. The site is bounded on the south by commercial buildings, on the north by commercial and residential buildings, on the east by Chico Avenue and on the west by Rosemead Boulevard (Site Vicinity Map, Figure 1). There is approximately 12 feet of relief across the site which gently slopes from east to west towards Rosemead Boulevard. The ground surface has been modified by past grading activities. Structures on the site consist of several drive-in associated buildings including two concession stands and a maintenance building. Paved parking areas surround much of the buildings.

The site coordinates are 34.0583 North and -118.0614 West. .

1.04 Site History

Based on review of aerial photographs and other information readily available online the site appears to have been a mix of vacant land and agricultural land from as far back as 1927 up until the 1950s when the site was paved over and developed for its present day use.

1.05 Planned Development

Formal plans for this site have not been drafted but it is presumed that the site will be developed for residential use.

1.06 Investigation Methods

Our investigation consisted of office research, field exploration, laboratory testing, review and analysis of the compiled data, and preparation of this report. It has been performed in a manner consistent with generally accepted engineering and geologic principles and practices, and has incorporated applicable requirements of California Buildings Code. Definitions of technical terms and symbols used in this report include those of the ASTM International, the California Building Code, and commonly used geologic nomenclature.

Technical supporting data are presented in the attached appendices. Appendix A presents a description of the methods and equipment used in performing the field exploration and logs of our subsurface exploration. Appendix B presents a description of our laboratory testing and the test results. General Earthwork and Grading Specifications are presented in Appendix C. The CPT data collected are presented in graphical format (Appendix D). Appendix E presents our engineering analysis. References are presented in Appendix F.

2.00 FINDINGS

2.01 Geologic Setting

The site lies at the southeastern end of the San Gabriel Valley the southern boundary of which is marked by the Puente and Montebello Hills. The valley is an east-west trending structural basin that has accumulated a thick sequence of Holocene- to Pleistocene-age alluvial sediments. The site is situated on a broad alluvial fan emanating from the San Gabriel Mountains to the north. The fan in the area of the site has been dissected by the ancestral San Gabriel Wash to the east and the Rio Hondo Wash at the west.

The earth materials that underlie the site consist of interbedded silt, clay and sand and gravel. Asphalt paving covers most of the site. A full description of the earth materials encountered within each borehole is included on the boring logs, Appendix A.

2.02 Earth Materials

<u>Asphalt and Base</u>

Asphalt and base conditions varied widely across all seven borings and ten test pits. Asphalt paving of up to 2 inches thick overlying up to 2 inches thick base where encountered. In several test pits, two generations of asphalt and concrete where discovered.

Artificial Fill (af)

Artificial fill is at a maximum of 5 feet thick as observed in the boring excavations and is composed of moderate orange brown fine silty sand with clay. It is slightly micaceous, slightly moist and medium dense.

Alluvium Deposits (Q_a)

Quaternary aged alluvial deposits are underlying artificial fill material. This unit consists of light orange brown to whitish grey, interbedded silty sand, sand, clayey sand and clay with sand. The sand was micaceous and ranged from course to fine. The sandy units were in a medium dense to dense condition. The soils were slightly moist with moist conditions occurring in the sand layers at the contact with the finer grained materials. Layers of course to fine gravels were encountered in some samples generally below 17 feet.

2.03 Expansive Soils

Based on our preliminary observations and laboratory data, the soils at shallow depths are expected to have an expansion index in the very low range. Additional expansion index and plasticity index testing will be required at the completion of rough grading to verify the properties of the near surface soils.

2.04 Surface and Groundwater Conditions

Groundwater was not encountered in the boring excavated to a maximum depth of 50 feet. Groundwater was encountered in CTP-1 at a depth of approximately 53 feet below the existing ground. Surface water on the site is limited to precipitation falling directly around the buildings on the site. Depth to groundwater in a monitoring well (Well ID: 2944F) located approximately 0.3 miles to the southeast of the site as measured in May 2020 was 47.68 feet. There was no surface water encountered at the time of our investigation. Depth to historic high groundwater is approximately 5 feet below existing grade according to the Seismic Hazard Zone Report for the El Monte Quadrangle (CDMG, 1998).

2.05 Faults

The proposed site is not located within an Alquist-Priolo Earthquake Fault Zone, and there are no known active faults on or immediately adjacent to the property. However, there are faults in close enough proximity to the site to cause moderate to intense ground shaking during the lifetime of the proposed development. Additionally, the site has experienced earthquake-induced ground shaking in the past and can be expected to experience further shaking in the future. The closest zoned fault is the East Montebello fault zone, located approximately 1.35 miles to the southwest of the subject site.

2.06 Landslides

According to the California Geological Survey Seismic Hazard Zones Map of the El Monte Quadrangle (2017) the site does not lie in a landslide hazard zone. Since the site is relatively flat earthquake-induced landsliding does not appear to be a hazard to proposed development.

2.07 Liquefaction

According to the State of California Seismic Hazard Zones Map of the El Monte Quadrangle, the site lies within a "Zone of Required Investigation for Liquefaction". Therefore, a liquefaction screening evaluation has been performed in accordance with California Geological Survey Special Publication SP-117A (2008), "Guidelines for Evaluating and Mitigating Seismic Hazards in California". The findings of our liquefaction screening evaluation are presented in section 3.04 of this report.

2.08 Historic Seismicity

The region of the subject site has experienced shaking from several earthquakes recorded back to 1812. The nearest large historic earthquake is the Raymond fault that occurred in 1855, the epicenter of which is 3.6 miles from the site. Historic earthquakes with magnitudes of greater than or equal to 6.0 and have been epicentered within approximately 50 miles of the site, are summarized in the table below.

Large Historic Earthquakes

Event	LAT. NORTH	LONG. WEST	DATE	Quake Mag.	APPROX. DISTANCE mi
Raymond	34.100	118.100	7/11/1855	6.3	3.60
Northridge	34.2130	118.5370	01/17/1994	6.7	29.2
Long Beach	33.6170	117.967	3/11/1933	6.3	30.9
	34.4110	118.4010	02/09/1971	6.4	31.1
	34.3	117.6	07/30/1894	6.0	31.2
Wrightwood	34.3	117.65	12/08/1812	7.0	31.9
	34.0	117.5	12/16/1858	7.0	32.4
	34.3	118.6	04/04/1893	6.0	35.0
	34.3	117.50	07/22/1899	6.50	36.1
	33.7	117.4	05/15/1910	6.0	45.3
	34.0	117.25	07/23/1923	6.25	46.6

3.00 CONCLUSIONS AND RECOMMENDATIONS

3.01 General Conclusion

Based on the data collected thus far the project appears feasible from a geotechnical standpoint. Our preliminary recommendations provided below are based on the data collected thus far and our understanding of the project and our general experience in engineering geology and geotechnical engineering.

3.02 Soil Site Class Determination

Seismic Cone Penetration Tests (SCPT) were performed at CPT-1 location by Gregg Drilling, LLC. Refusal was encountered at a depth of 67.1 feet below existing ground. We have used the shear wave velocity at 67.1 feet for the depths from 67.1 feet to 100 feet to calculate the average shear wave velocity to a depth of 100 feet.

The test results from SCPT are presented in the following table.

Top Layer, ft.	Bottom Layer, ft.	Shear Wave Velocity, ft./sec.
4.4	9.3	563.9
9.3	14.4	649.5
14.4	19.4	851.6
19.4	24.3	824.7
24.3	29.4	922.8
29.4	34.4	812.5
34.4	39.4	826.3
39.4	44.5	846.9
44.5	49.4	793.2
49.4	54.5	753
54.5	59.4	983.8
59.4	64.6	1116.5
64.6	67.1	1405.6
67.1	100	1405.6

The calculated average shear wave velocity was 1022 feet per second (ft./sec.) by using Equation 20.1-1 of 2019 CBC. Thus, the soil site class was determined to be Site Class D (stiff soil) per Table 20.3-1 of 2019 CBC.

3.03 Seismic Design Parameters

Mapped Spectral Accelerations were obtained by using the online ATC Calculator (ASCE 7-16 Standard) and a site class D was used for the project site based on the seismic shear wave velocity profile obtained from SCPT. Since the mapped risk-targeted maximum considered earth quake (MCE_R) spectral response acceleration parameter at a period of 1 second (S_1) is greater than 0.2, a ground motion hazard analysis is required per ACSE/SEI 7-16 to be performed in accordance with Section 21.2 for structures on Site Class D. However, instead of performing the ground motion hazard analysis, a long period coefficient (F_V) of 1.7 was used for calculation of S_{M1} and S_{D1}. The parameters generated for the subject site are presented in the following table:

2019 California Building Code (CBC) Seismic Parameters

Parameter	Value
Site Location	Latitude = 34.0583 degrees Longitude = -118.0614 degrees
Site Class	Site Class = D
Mapped Spectral Accelerations	S_s (0.2- second period) = 1.902g S_1 (1-second period) = 0.685g
Site Coefficients (Site Class D)	F_a = 1.0 F_v = 1.7
Maximum Considered Earthquake Spectral Accelerations (Site Class D)	S_{MS} (0.2- second period) = 1.902g S_{M1} (1-second period) = 1.165g
Design Earthquake Spectral Accelerations (Site Class D)	S_{DS} (0.2- second period) = 1.268g S_{D1} (1-second period) = 0.776g

For Risk Category II structures with mapped spectral response acceleration parameter at 1-s period (S_1) is less than 0.75, the Seismic Design Category is D (ASCE 7-16 Section 11.6).
Peak earthquake ground acceleration adjusted for site class effects (PGAM) has been determined in accordance with ASCE 7-10 Section 11.8.3 as follows: $PGA_M = F_{PGA} \times PGA = 1.1 \times 0.82g = 0.902g$.

3.04 Liquefaction and Secondary Earthquake Hazards

Potential secondary seismic hazards that can affect land development projects include liquefaction, tsunamis, seiches, seismically induced settlement, seismically induced flooding and seismically induced landsliding.

Liquefaction

Liquefaction hazard potential for the site is discussed in Section 2.07 and Section 3.04 of this report.

Tsunamis and Seiches

Tsunamis are sea waves that are generated in response to large-magnitude earthquakes. When these waves reach shorelines, they sometimes produce coastal flooding. Seiches are the oscillation of large bodies of standing water, such as lakes, that can occur in response to ground shaking. Tsunamis and seiches do not pose hazards due to the inland location of the site and lack of nearby bodies of standing water.

Seismically Induced Settlement

Seismically induced settlement occurs most frequently in areas underlain by loose, granular sediments. Damage as a result of seismically induced settlement is most dramatic when differential settlement occurs in areas with large variations in the thickness of underlying sediments. Settlement caused by ground shaking is often non-uniformly distributed, which can result in differential settlement.

A seismic settlement analysis was performed using LiquefyPro Version 5 (2015 Edition) for this project. A summary of the input data and the results of the seismic settlement analysis are provided in Appendix E.

Seismically Induced Flooding

According to Federal Emergency Management Agency (Flood Insurance Rate Map #06037C1670F and #06037C1665F, Effective date 9/26/2008), the site is located in an area of Flood Zone X, which is an area where the likelihood of flood hazards is considered minimal. In addition there are no water reservoirs in the vicinity of the site. Based on the aforementioned the potential for seismic induced flooding is unlikely.

Seismically Induced Landsliding

According to the California Geological Survey Seismic Hazard Zones Map of the El Monte Quadrangle (2017) the site does not lie in a landslide hazard zone. Since the site is relatively flat earthquake-induced landsliding does not appear to be a hazard to proposed development.

3.05 Liquefaction Screening Evaluation Results

Liquefaction describes a phenomenon where cyclic stresses, which are produced by earthquake-induced ground motions, create excess pore pressures in cohesionless soils. As a result, the soils may acquire a high degree of mobility, which can lead to lateral spreading, consolidation and settlement of loose sediments, ground oscillation, flow failure, loss of bearing strength, ground fissuring, sand boils, and other damaging deformations. This phenomenon occurs only below the water table, but after liquefaction has developed, it can propagate upward into overlying, non-saturated soil as excess pore water escapes. Descriptions of each of the phenomena associated with liquefaction are described below:

Research has shown that saturated, loose sands with a silt content less than about 25 percent are most susceptible to liquefaction, whereas other soil types are generally considered to have a low susceptibility. According to the California Geological Survey (CGS) Special Publication SP-117A (2008), "Guidelines for Evaluating and Mitigating Seismic Hazards in California," any materials with a PI > 12 and moisture content < 85% of the liquid limit were considered not subject to liquefaction. Liquefaction susceptibility is related to numerous factors, and the following conditions must exist for liquefaction to occur:

- Sediments must be relatively young in age and must not have developed large amounts of cementation
- Sediments must consist mainly of cohesionless sands and silts
- The sediment must not have a high relative density
- Free groundwater must exist in the sediment; and
- The site must be exposed to seismic events of a magnitude large enough to induce straining of soil particles

Static groundwater was not encountered in either borings drilled to a maximum depth of 50 feet. The groundwater was encountered in CPT-1 at a depth of approximately 53 feet below ground elevation. However, according to the California Division of Mines and Geology Seismic Hazard Zone Report for the El Monte Quadrangle (CDMG, 1998), the historical high groundwater table is approximately 5 feet below grade. Therefore, RMA GeoScience considered the potential for groundwater to be at this depth below existing grade in the liquefaction screening evaluation.

For the PGA corresponding to two-thirds of the PGA_M and predominant earthquake magnitude corresponding to a 10% probability of exceedance in 50 years, potential seismic-induced settlements were determined when the safety factor was less than 1.1. Liquefaction potentials were evaluated by using computer programs LiquefyPro Version 5 for Boring B-3 and B-6 and CPT-1 to CPT-3 and the results are presented in Appendix E. The seismic settlements from Boring B-3 and B-6 and CPT-1 to CPT-3 are presented in the following table.

Boring/CPT Locations	Seismic-Induced Settlements, inch
Boring No. 3	2.47
Boring No. 6	3.23
CPT-1	1.99
CPT-2	1.01
CPT-3	2.10

3.06 Total and Differential Settlement

The above seismically induced settlements should be combined with the anticipated total static settlement in order to obtain an estimate of the amount of differential settlement that may affect the site. The maximum total static settlement is not expected to exceed ½ inch under the recommended bearing pressure.

We assume the seismic differential settlement is half of the total seismic settlement and static differential settlement is half of the total static settlement. In considering all liquefaction analysis results, we recommend total settlement (static and seismic) is expected to be less than 3 inches with differential settlement (static and seismic) of less than 1½ inches in a 40 feet span.

3.07 Removals and Overexcavation

Upon demolition and removal of all existing site improvements, all vegetation, organic rich soil (soils containing more that 2 percent organics by weight), trash and debris should be cleared from the grading area and removed from the site. After the removal of deleterious materials, stripping of organic-rich soils, and removal of tree roots, the following removals and over-excavation must be done within the area of the limits of grading:

- All artificial fill soil should be removed within the limits of grading. The fill soil may be used for engineered fill provided it is free of trash and organic material. Within the building areas, removals are recommended to a minimum of seven (7) feet below existing grade or five (5) feet below the bottom of planned footings, whichever is greater.
- Within the area of planned streets and all other areas where grading is planned, all artificial fill must be completely removed and the subgrade must be over-excavated at least 12 inches below the stripped surface or the finished subgrade surface, whichever is lower.

Following the over-excavation indicated above, a designated representative for the Project Geotechnical Engineer must review the exposed ground surface and determine if any additional over-excavation is required. The over-excavated ground surface in all areas determined to be satisfactory for the support of fills must be scarified to a minimum depth of 6 inches. Scarification should continue until the soils are broken down and free from lumps or clods and until the scarified zone is uniform. The moisture content of the scarified zone shall be adjusted to within 2% of the optimum moisture content. The scarified zone must then be uniformly compacted to at least 90% relative compaction

The above recommendations are based on the assumption that soils encountered during field exploration are representative of soils throughout the site. However, there can be unforeseen and unanticipated variations in soils between points of subsurface exploration. Hence, overexcavation depths must be verified, and adjusted if necessary, at the time of grading.

3.08 General Earthwork and Grading

All grading should be performed in accordance with the General Earthwork and Grading Specifications outlined in Appendix C, unless specifically revised or amended below. Recommendations contained in Appendix C are general specifications for typical grading projects and may not be entirely applicable to this project.

It is also recommended that all earthwork and grading be performed in accordance with the requirements of the lead agency.

3.09 Earthwork Shrinkage and Subsidence

The site is not located within a zone of land subsidence according to the United States Geological Survey California Water Science Center website. It is our opinion that the potential for land subsidence due to over pumping of groundwater or oil extraction is low.

Shrinkage is the decrease in volume of soil upon removal and recompaction expressed as a percentage of the original in-place volume. Subsidence occurs as natural ground is densified to receive fill. These factors account for changes in earth volumes that will occur during grading. Our estimates are as follows:

- Shrinkage factor = 5% to 15% for soil removed and replaced as compacted fill.
- Subsidence factor = 0.1 foot.

The degree to which fill soils are compacted and variations in the in-situ density of existing soils will influence earth volume changes. Consequently, some adjustments in grades near the completion of grading could be required to balance the earthwork.

3.10 Foundation

The expansion index results of the on-site soils had very low expansion potential. However, considering the total and differential settlements from static and seismic conditions, the site may be considered suitable for the support of the anticipated structures using post-tension foundation systems. The post-tension foundations should be designed for a differential settlement of 1½ inches in a 40 feet span and we recommend an effective Plasticity Index (PI) value of 15 for design. The allowable soil bearing values and foundation parameters are summarized in the following table.

Number of Stories	Expansion Index	Footing Width, inch	Depth Below Natural Surface of Ground and Finish Grade		Allowing Soil Bearing Values (psf)
			Perimeter Footings, inch	Interior Footings, inch	
1	Very Low to Low	12	15	12	1,500
2	Very Low to Low	15	18	18	2,000
3	Very Low to Low	18	24	24	2,500

Those allowable bearing values may be increased by 20% for additional foot of width and/or depth to a maximum value of 3,000 psf. The bearing pressures represent an allowable net increase in soil pressure over existing soil pressure and may be increased by one-third for short-term wind or seismic loads.

All footing excavations should be observed by the geotechnical consultant to verify that they have been excavated into competent soils. The foundation excavations should be observed prior to the placement of forms, reinforcement steel, or concrete. These excavations should be evenly trimmed and level. Prior to concrete placement, any loose or soft soils should be removed. Excavated soils should not be placed in slab or footing areas unless properly compacted.

Footings may experience an overall loss in bearing capacity or an increased potential to settle where located in close proximity to existing or future utility trenches. Furthermore, stresses imposed by the footings on the utility lines may cause cracking, collapse and/or a loss of serviceability. To reduce this risk, footings should extend below a 1:1 plane projected upward from the closest bottom corner of the trench.

We recommend additional testing be performed near the completion of fine grading to verify the test results and recommended foundation design criteria.

3.11 Retaining Wall Foundations

Footings for retaining walls should be founded supported on 3 feet of compacted fill with a minimum depth of 12 inches and have a minimum width of 12 inches. Footings may be designed using the allowable bearing capacity of 1,500 psf and the same lateral resistance values recommended for building footings. However, when calculating passive resistance, the upper 6 inches of the footings should be ignored in areas where the footings will not be covered with concrete flatwork.

In view of the seismic setting, a nominal reinforcement consisting of at least two #4 bar placed within 3 inches of the top of footings and another two placed within 3 inches of the bottom of footings is recommended. Reinforcement of wide footings should be determined by the structural engineer who may also require heavier reinforcement.

3.12 Slab-On-Grade

Concrete floor slabs on grade with a minimum thickness of 4 inches are recommended for slabs on grade for the proposed structures for normal floor loading conditions. However, if heavy concentrated or moving loads are anticipated, slabs should be designed using a modulus of subgrade reaction (k) of 150 psi/in when soils are prepared in conformance with the grading recommendations contained within the report. Reinforcement of slabs on grading is not required to mitigate the expansive soils. Reinforcement may be specified by the structural engineer.

Concrete floor slabs on grade should be divided into squares or rectangles using weakened plane joints (contraction joints), each with maximum dimensions not exceeding 15 feet. Contraction joints should be made in accordance with American Concrete Institute (ACI) guidelines. If weakened plane joints are not used, then the slabs shall be reinforced with 6x6-10/10 welded wire fabric placed at mid-height of the slab.

Special care should be taken on floors slabs to be covered with thin-set tile or other inflexible coverings. These areas may be reinforced with 6x6-10/10 welded wire fabric placed at mid-height of the slab, to mitigate drying shrinkage cracks. Alternatively, inflexible flooring may be installed with unbonded fabric or liners to prevent reflection of slab cracks through the flooring.

A moisture vapor retarder/barrier is recommended beneath all slabs-on-grade that will be covered by moisture-sensitive flooring materials such as vinyl, linoleum, wood, carpet, rubber, rubber-backed carpet, tile, impermeable floor coatings, adhesives, or where moisture-sensitive equipment, products, or environments will exist. We recommend that design and construction of the vapor retarder or barrier conform to Section 1805 of the 2019 California Building Code (CBC) and pertinent sections of American Concrete Institute (ACI) guidance documents 302.1R-04, 302.2R-06 and 360R-10.

The moisture vapor retarder/barrier should consist of a minimum 10 mils thick polyethylene with a maximum perm rating of 0.3 in accordance with ASTM E 1745. Seams in the moisture vapor retarder/barrier should be

overlapped no less than 6 inches or in accordance with the manufacturer's recommendations. Joints and penetrations should be sealed with the manufacturer's recommended adhesives, pressure-sensitive tape, or both. The contractor must avoid damaging or puncturing the vapor retarder/barrier and repair any punctures with additional polyethylene properly lapped and sealed.

ACI guidelines allow for the placement of moisture vapor retarder/barriers either directly beneath floor slabs or below an intermediate granular soil layer.

Placing the moisture retarder/barrier directly beneath the floor slab will provide improved curing of the slab bottom and will eliminate potential problems caused by water being trapped in a granular fill layer. Concrete slabs poured directly on a vapor retarder/barrier can experience shrinkage cracking and curling due to differential rates of curing through the thickness of the slab. Therefore, for concrete placed directly on the vapor retarded, we recommend a maximum water cement ratio of 0.45 and the use of water-reducing admixtures to increase workability and decrease bleeding.

If granular soil is placed over the vapor retarder/barrier, we recommend that the layer be at least 2 inches thick in accordance with traditional practice in southern California. Granular fill should consist of clean fine graded materials with 10 to 30% passing the No. 100 sieve and free from clay or silt. The granular layer should be uniformly compacted and trimmed to provide the full design thickness of the proposed slab. The granular fill layer should not be left exposed to rain or other sources of water such as wet-grinding, power washing, pipe leaks or other processes, and should be dry at the time of concrete placement. Granular fill layers that become saturated should be removed and replaced prior to concrete placement.

An additional layer of sand may be placed beneath the vapor retarder/barrier at the developer's discretion to minimize the potential of the retarder/barrier being punctured by underlying soils.

3.13 Miscellaneous Concrete Flatwork

Miscellaneous concrete flatwork and walkways may be designed with a minimum thickness of 4 inches. Large slabs should be reinforced with a minimum of 6x6-10/10 welded wire mesh placed at mid-height in the slab. Control joints should be constructed to create squares or rectangles with a maximum spacing of 15 feet.

Walkways may be constructed without reinforcement. Walkways should be separated from foundations with a thick expansion joint filler. Control joints should be constructed into non-reinforced walkways at a maximum of 5 feet spacing.
The subgrade soils beneath all miscellaneous concrete flatwork should be compacted to a minimum of 95 percent relative compaction for a minimum depth of 12 inches. The geotechnical engineer should monitor the compaction of the subgrade soils and perform testing to verify that proper compaction has been obtained.

3.14 Footing Excavation and Slab Preparation

All footing excavations should be observed by the geotechnical consultant to verify that they have been excavated into competent soils. The foundation excavations should be observed prior to the placement of forms, reinforcement steel, or concrete. These excavations should be evenly trimmed and level. Prior to concrete placement, any loose or soft soils should be removed. Excavated soils should not be placed on slab or footing areas unless properly compacted.

Prior to the placement of the moisture barrier and sand, the subgrade soils underlying the slab should be observed by the geotechnical consultant to verify that all under-slab utility trenches have been properly backfilled and compacted, that no loose or soft soils are present, and that the slab subgrade has been properly compacted to a minimum of 95 percent relative compaction within the upper 12 inches.

Footings may experience and overall loss in bearing capacity or an increased potential to settle where located in close proximity to existing or future utility trenches. Furthermore, stresses imposed by the footings on the utility lines may cause cracking, collapse and/or a loss of serviceability. To reduce this risk, footings should extend below a 1:1 plane projected upward from the closest bottom of the trench.

Subgrade soils beneath slabs on grade and walkways moist prior to the placement of concrete. The geotechnical consultant should verify that the appropriate moisture content has been achieved a maximum of 24 hours prior to the placement of concrete or moisture barriers.

3.15 Lateral Load Resistance

Lateral loads may be resisted by soil friction and the passive resistance of the soil. The following parameters are recommended.

- Passive Earth Pressure = 280 pcf (equivalent fluid weight).

  We recommend neglecting passive soil resistance from the upper foot of soil unless protected by a concrete slab or pavement.

- Coefficient of Friction (soil to footing) = 0.27
- Retaining structures should be designed to resist the following lateral active earth pressures:

Surface Slope of Retained Materials (Horizontal:Vertical)	Equivalent Fluid Weight (pcf)
Level	37
5:1	39
4:1	40
3:1	43
2:1	54

  These active earth pressures are only applicable if the retained earth is allowed to strain sufficiently to achieve the active state. The required minimum horizontal strain to achieve the active state is approximately 0.0025H. Retaining structures should be designed to resist an at-rest lateral earth pressure if this horizontal strain cannot be achieved.

- At-rest Lateral Earth Pressure = 57 pcf (equivalent fluid weight)

The lateral earth pressure due to earthquake motions for the retaining walls are calculated by using $PGA=S_{DS}/2.5=0.608g$ and $\Upsilon=130$ pcf for retaining wall dynamic load increment calculations. The point of application may vary between 0.37H to 0.40H.

- Basement (restrained) walls with level backfill:
  $P_{ae} = \frac{1}{2}\gamma H^2(0.68\ PGA/g) = 29\ H^2$

- Cantilever (unrestrained) walls with level backfill:
  $P_{ae} = \frac{1}{2}\gamma H^2(0.42\ PGA/g) = 18\ H^2$

- Cantilever (unrestrained) walls with no steeper than 2:1 slope:
  $P_{ae} = \frac{1}{2}\gamma H^2(0.70\ PGA/g) = 30\ H^2$

3.16 Cement Type and Corrosion Potential

A soluble sulfate test performed on a shallow sample of soil indicates that concrete at the subject site will have a negligible exposure to water-soluble sulfate in the soil. Our recommendations for concrete exposed to sulfate-containing soils are presented in the following table.

Recommendations for Concrete exposed to Sulfate-containing Soils

Sulfate Exposure	Water Soluble Sulfate (SO_4) in Soil (% by Weight)	Sulfate (SO_4) in Water (ppm)	Cement Type (ASTM C150)	Maximum Water-Cement Ratio (by Weight)	Minimum Compressive Strength (psi)
Negligible	0.00 - 0.10	0-150	--	--	2,500
Moderate	0.10 - 0.20	150-1,500	II	0.50	4,000
Severe	0.20 - 2.00	1,500-10,000	V	0.45	4,500
Very Severe	Over 2.00	Over 10,000	V plus pozzolan or slag	0.45	4,500

Use of alternate combinations of cementitious materials may be permitted if the combinations meet design recommendations contained in American Concrete Institute guideline ACI 318-11.

The soils were also tested for soil reactivity (pH) and electrical resistivity (ohm-cm). The test results indicate that the on-site soils have soil reactivity of 8.9 and 8.7 and electrical resistivity of 8,658 and 3,260 ohm-cm. A neutral or non-corrosive soil has a reactivity value ranging from 5.5 to 8.4. Generally, soils that could be considered moderately corrosive to ferrous metals have resistivity values of about 3,000 ohm-cm to 10,000 ohm-cm. Soils with resistivity values less than 3,000 ohm-cm can be considered corrosive and soils with resistivity values less than 1,000 ohm-cm can be considered extremely corrosive.

Based on our analysis, underlying onsite soils are corrosive to ferrous metals. Protection of buried pipes utilizing coatings on all underground pipes; clean backfills and a cathodic protection system can be effective in controlling corrosion. A qualified corrosion engineer may be consulted to further assess the corrosive properties of the soil.

3.17 Preliminary Pavement Sections

Based on the soil profiles at the subject project, a subgrade R-value of 30 has been used to develop the preliminary pavement sections given below. The structural section recommendations (AC over processed miscellaneous base materials (with a minimum R-value of 78)) given herein were developed using the procedures outlined in Chapter 630 of the California Highway Design Manual (Caltrans, 2012). This procedure uses the principle that the pavement structural section must be of adequate thickness to distribute the load from the design TI to the subgrade soils in such a manner that the stresses from the applied loads do not exceed the strength of the soil (R-value). We would recommend the following preliminary structural sections:

ASPHALT SECTIONS

TRAFFIC INDEX	ASPHALT THICKNESS, IN.	BASE THICKNESS, IN.
4.5	3.0	5.0
5.0	3.0	6.0
6.0	4.0	7.0

At a minimum, the upper 12 inches of subgrade soils should be at or no more than 2% over optimum moisture content and compacted to a minimum of 90% relative compaction prior to placement of base. All aggregate base courses should also be at or no more than 2% over optimum moisture and compacted to a minimum of 95% relative compaction.

3.18 Utility Trench Backfill

The onsite fill soils will not be suitable for use as pipe bedding for buried utilities. All pipes should be bedded in a sand, gravel or crushed aggregate imported material complying with the requirements of the Standard Specifications for Public Works Construction (Greenbook) Section 306-1.2.1. Crushed rock products that do not contain appreciable fines should not be utilized as pipe bedding and/or backfill. Bedding materials should be densified to at least 90% relative compaction (ASTM D1557). The geotechnical consultant should review and approve of proposed bedding materials prior to use.

The on-site soils are expected to be suitable as trench backfill provided they are screened of organic matter, boulders and cobbles over 6 inches in diameter. Trench backfill should be densified to at least 90% relative compaction (ASTM D1557). On-site granular soils with a sand equivalent value of 15 or greater may be water densified initially per Greenbook Specifications. Supplemental mechanical compaction methods will be required to attain the required 90% relative compaction.

All utility trench backfill within street right of way, utility easements, under or adjacent to sidewalks, driveways, or building pads should be observed and tested by the geotechnical consultant to verify proper compaction. Trenches excavated adjacent to foundations should not extend within the footing influence zone defined as the area within a line projected at a 1:1 drawn from the bottom edge of the footing. Trenches crossing perpendicular to foundations should be excavated and backfilled prior to the construction of the foundations. The excavations should be backfilled in the presence of the geotechnical engineer and tested to verify adequate compaction beneath the proposed footing.

Cal/OSHA construction safety orders should be observed during all underground work.

3.19 Temporary Excavations

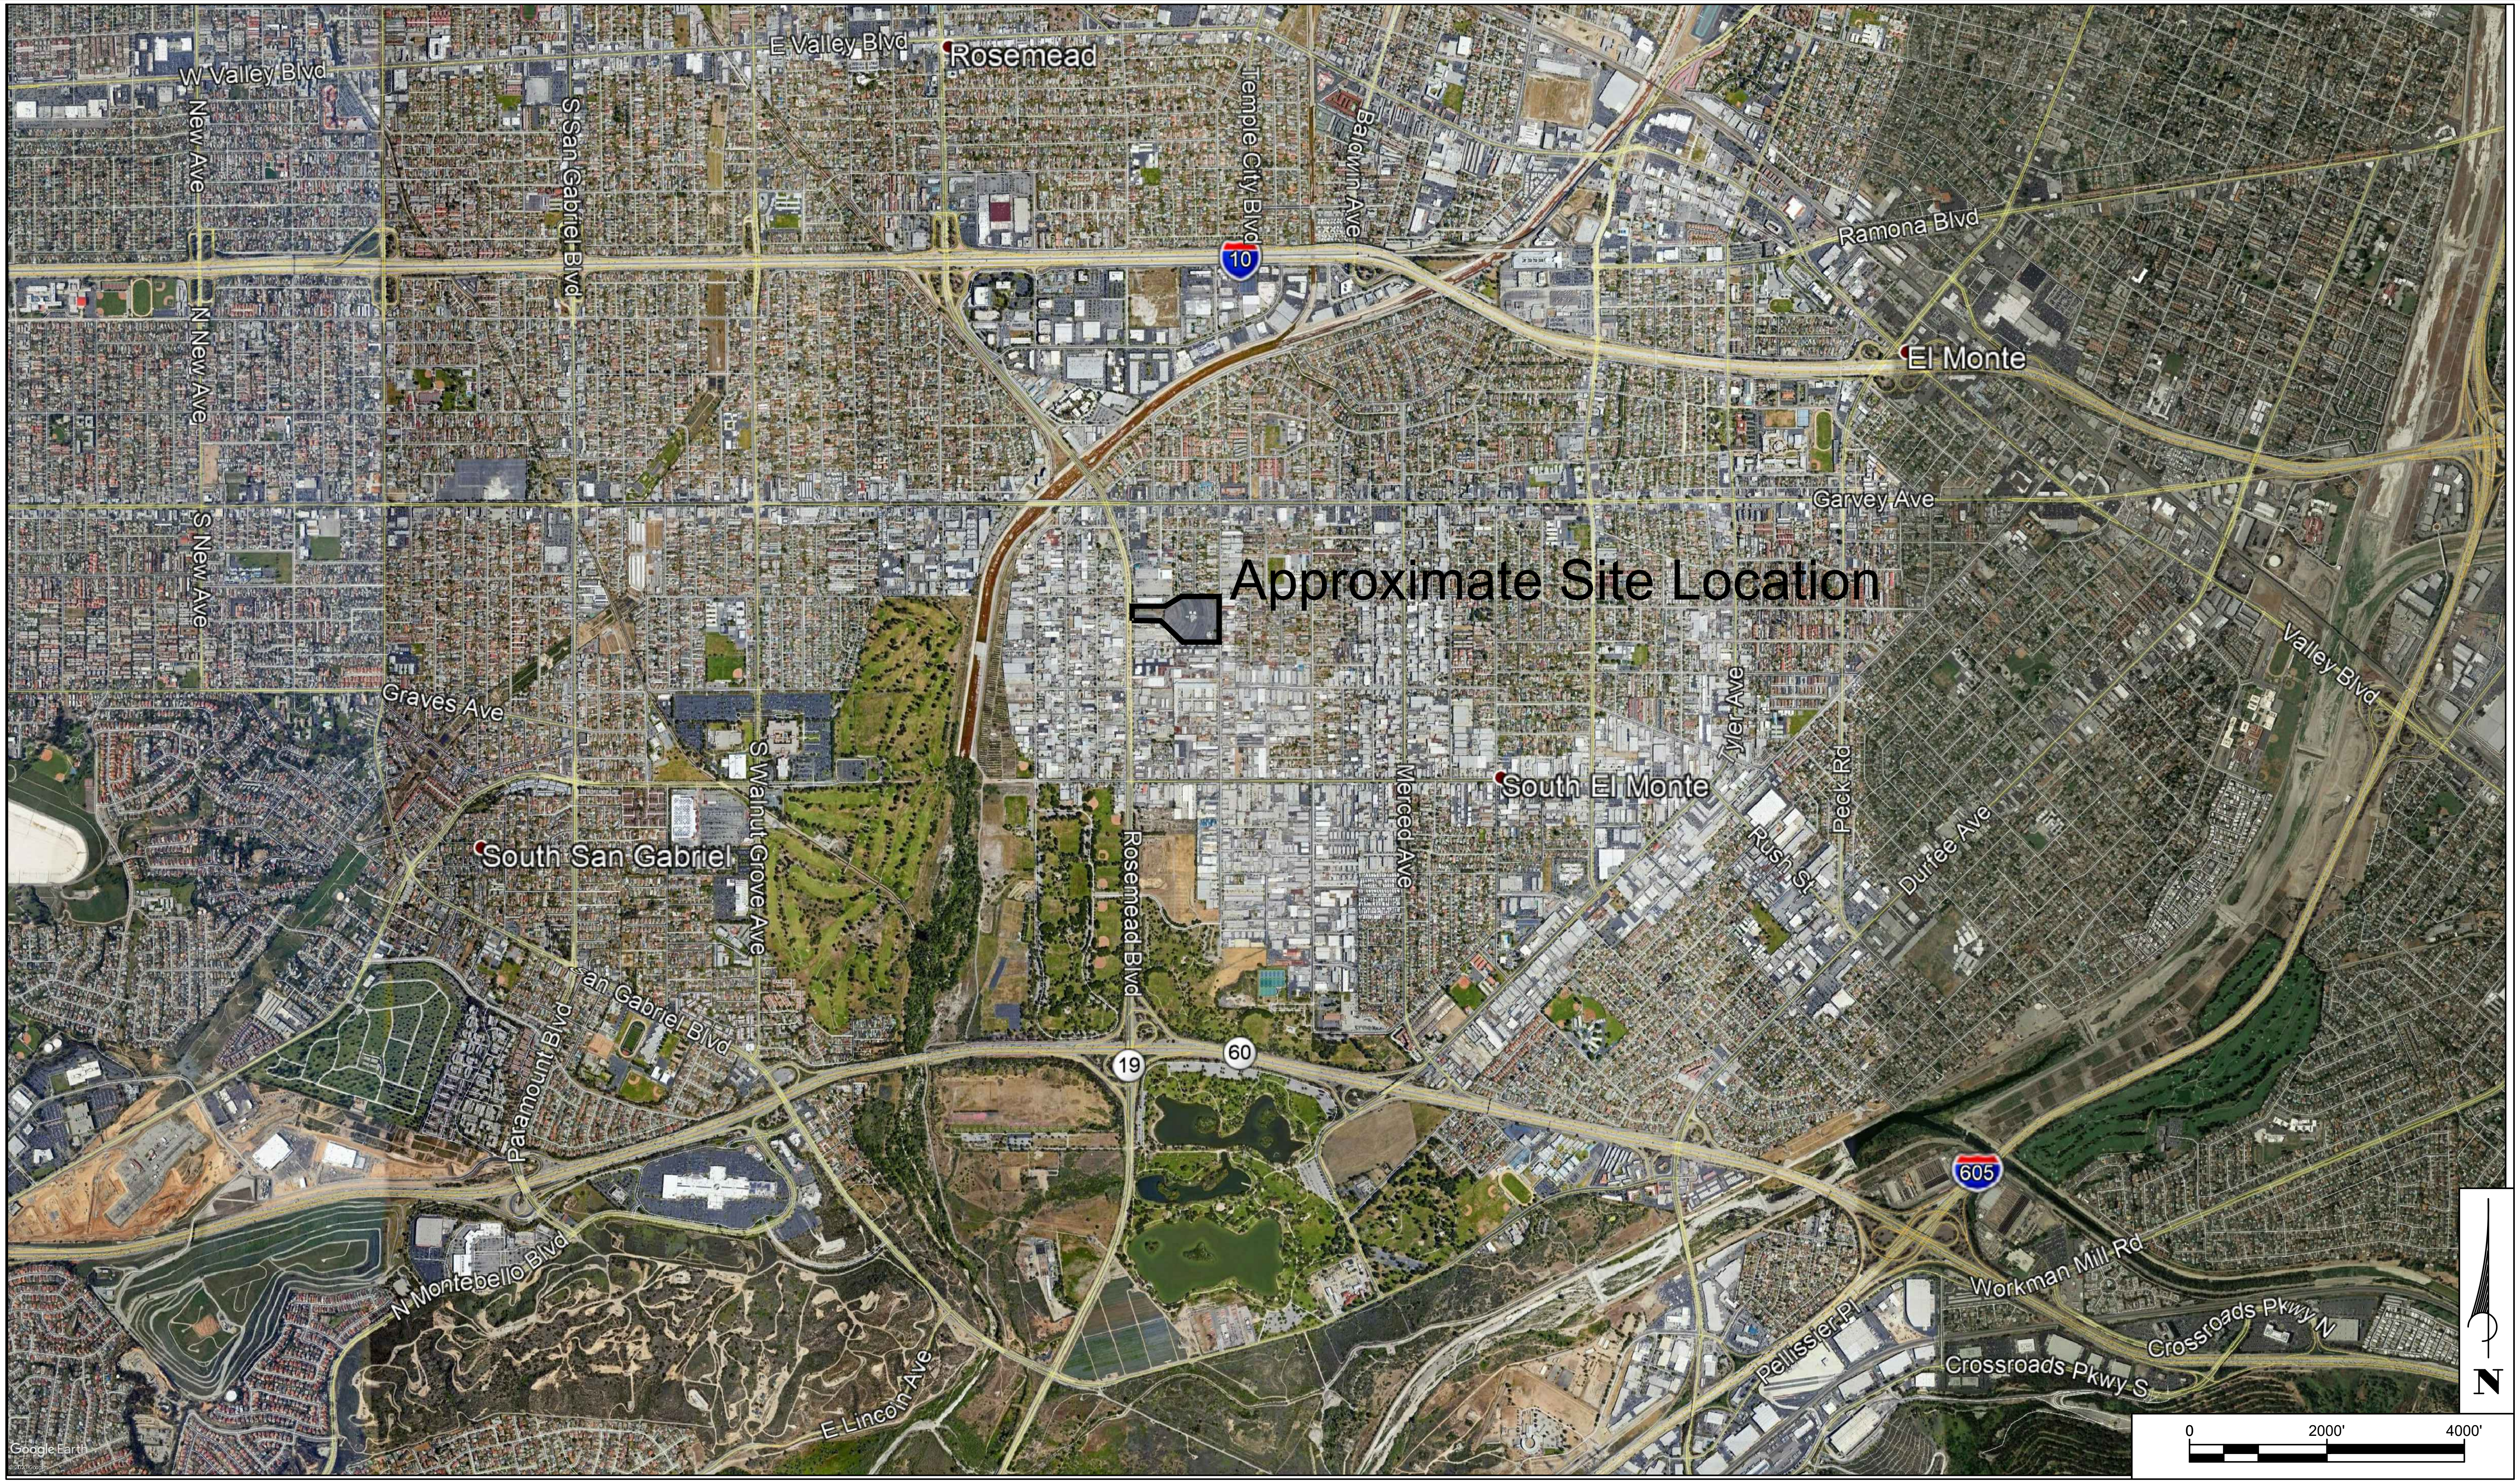
Based on the recommended removal depths as described in Section 3.06, temporary excavations within the limits of grading are expected to be 5 feet. Excavations may be cut vertically to a maximum height of 4 feet. Cuts above 4 feet may be laid back at a gradient of 1:1.

3.20 Drainage

Surface drainage should be directed away from the proposed structures into suitable drainage devices. Neither excess irrigation nor rainwater should be allowed to collect or pond against building foundations or within low-lying or level areas of the lot. Surface waters should be diverted away from the tops of slopes and prevented from draining over the top of slopes and down the slope face.

3.21 Plan Review

Once formal plans are prepared for the subject property, this office should review the plans from a geotechnical viewpoint, comment on changes from the plan used during preparation of this report and revise the recommendations of this report where necessary.



4.00 CLOSURE

This investigation was completed in accordance with generally accepted industry practice to provide recommendations for developing the property from a geotechnical perspective. Information presented in this report is based on research, field investigation, laboratory testing, and engineer judgment obtained from similar projects completed on nearby properties. This assessment is not, and should not be construed as, a warranty or guarantee concerning the geotechnical conditions which may affect the future development of the property. All discovered information has been disclosed and a good faith effort has been made to consult pertinent sources.

This study and report have been prepared on behalf and for the exclusive use of KB Home, and solely for use as a preliminary evaluation of the subject site. This report and its findings shall not, in whole or in part, be disseminated or conveyed to any other party, nor used by any other party in whole or in part, without prior written consent of RMA Geoscience, Inc. and KB Home. However, RMA Geoscience, Inc. acknowledges and agrees that the report may be conveyed to the design professionals for consideration in developing the property.

APPENDIX A

FIELD INVESTIGATION

APPENDIX A

FIELD INVESTIGATION

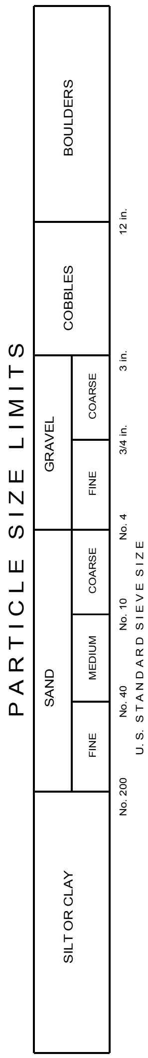
A-1.00 FIELD EXPLORATION

A-1.01 Number of Borings and Test Pits and CPT

Our subsurface investigation consisted of seven (7) hollow stem boring auger to depths of up to 50 feet and nine (9) test pits t dug with a backhoe to a maximum depth of 17 feet. Three (3) CPT were conducted within subject site by Gregg Drilling, LLC.

A-1.02 Location of Boring and Test Pits and CPT

A Boring Location Map showing the approximate locations of the borings and test pits and CPTs are presented as Plate 1.



A-1.03 Boring and Test Pit Logging

Logs of the borings and test pits were prepared by one of our staff and are attached in this appendix. The logs contain factual information and interpretation of subsurface conditions between samples. The strata indicated on these logs represent the approximate boundary between earth units and the transition may be gradual. The logs show subsurface conditions at the dates and locations indicated, and may not be representative of subsurface conditions at other locations and times.

Identification of the soils encountered during the subsurface exploration was made using the field identification procedure of the Unified Soils Classification System (ASTM D2488). A legend indicating the symbols and definitions used in this classification system and a legend defining the terms used in describing the relative compaction, consistency or firmness of the soil are attached in this appendix. Bag samples of the major earth units were obtained for laboratory inspection and testing.

A-1.04 CPT Results

CPT soundings were performed in accordance with ASTM D 5778-12. During the CPT, the cone takes measures of tip resistance, sleeve resistance, and penetration pore water pressure. Measurements are taken at 5 centimeter intervals during penetration to provide a nearly continuous profile. CPT data reduction and basic interpretation is performed in real time facilitating on-site decision making. The above mentioned parameters are stored electronically for further analysis and reference. CPT results are presented in Appendix D.

MAJOR DIVISIONS			GROUP SYMBOLS	TYPICAL NAMES
COARSE GRAINED SOILS (More than 50% of material is LARGER than No. 200 sieve size)	GRAVELS (More than 50% of coarse fraction is LARGER than the No. 4 sieve size.	CLEAN GRAVELS (Little or no fines)	GW	Well graded gravel, gravel-sand mixtures. little or no fines.
			GP	Poorly graded gravel or gravel-sand mixtures, little or no fines.
		GRAVELS WITH FINES (Appreciable amt. of fines)	GM	Silty gravels, gravel-sand-silt mixtures.
			GC	Clayey gravels, gravel-sand-clay mixtures.
	SANDS (More than 50% of coarse fraction is SMALLER than the No. 4 sieve size)	CLEAN SANDS (Little or no fines)	SW	Well graded sands, gravelly sands, little or no fines.
			SP	Poorly graded sands or gravelly sands, little or no fines.
		SANDS WITH FINES (Appreciable amount of fines)	SM	Silty sands, sand-silt mixtures.
			SC	Clayey sands, sand-clay mixtures.
FINE GRAINED SOILS (More than 50% of material is SMALLER than No. 200 sieve size)	SILTS AND CLAYS (Liquid limit LESS than 50)		ML	Inorganic silts and very fine sands, rock flour silty or clayey fine sands or clayey silts with slight plasticity
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays.
			OL	Organic silts and organic silty clays of low plasticity.
	SILTS AND CLAYS (Liquid limit GREATER than 50)		MH	Inorganic silts, micaceous or diatamaceous fine sandy or silty soils, elastic silts.
			CH	Inorganic clays of high plasticity, fat clays.
			OH	Organic clays of medium to high plasticity, organic silts.
HIGHLY ORGANIC SOILS			Pt	Peat and other highly organic soils.

BOUNDARY CLASSIFICATIONS: Soils possessing characteristics of two groups are designated by combinations of group symbols.

UNIFIED SOIL CLASSIFICATION SYSTEM

I. SOIL STRENGTH/DENSITY

BASED ON STANDARD PENETRATION TESTS

Compactness of sand		Consistency of clay	
Penetration Resistance N (blows/Ft)	Compactness	Penetration Resistance N (blows/ft)	Consistency
0-4	Very Loose	<2	Very Soft
4-10	Loose	2-4	Soft
10-30	Medium Dense	4-8	Medium Stiff
30-50	Dense	8-15	Stiff
>50	Very Dense	15-30	Very Stiff
		>30	Hard

N = Number of blows of 140 lb. weight falling 30 in. to drive 2-in OD sampler 1 ft.

BASED ON RELATIVE COMPACTION

Compactness of sand		Consistency of clay	
% Compaction	Compactness	% Compaction	Consistency
<75	Loose	<80	Soft
75-83	Medium Dense	80-85	Medium Stiff
83-90	Dense	85-90	Stiff
>90	Very Dense	>90	Very Stiff

II. SOIL MOISTURE

Moisture of sands		Moisture of clays	
% Moisture	Description	% Moisture	Description
<5%	Dry	<12%	Dry
5-12%	Moist	12-20%	Moist
>12%	Very Moist	>20%	Very Moist, wet

APPENDIX B

LABORATORY TESTS

APPENDIX B

B-1.00 LABORATORY TESTS

B-1.01 Maximum Density

Maximum density - optimum moisture relationships for the major soil types encountered during the field exploration were performed in the laboratory using the standard procedures of ASTM D1557.

B-1.02 Particle Size Analysis

Particle size analysis was performed on a representative sample of the on-site soils in accordance with the standard test methods of the ASTM D422. The test results are included in this Appendix B.

B-1.03 Materials Finer than #200

Particle size analysis was performed on representative samples of the on-site soils in accordance with the standard test methods of the ASTM D1140. The test results are presented on the boring logs in Appendix A.

B-1.04 Expansion Tests

Expansion index tests were performed on representative samples of the major soil types encountered by the test methods outlined in ASTM D4829.

B-1.05 Soluble Sulfates

A test was performed on representative sample encountered during the investigation using the California Test Method 417.

B-1.06 Soil Reactivity (pH) and Minimum Resistivity

A near-surface soil samples were tested for soil reactivity (pH) and minimum electrical resistivity using California Test Method 643. The pH measurement determines the degree of acidity or alkalinity in the soils. The minimum resistivity is used as an indicator of how corrosive the soil is relative to buried metallic items.

B-1.07 Moisture Determination

Moisture content of the soil samples was performed in accordance to standard method for determination of water content of soil by drying oven, ASTM D2216. The mass of material remaining after oven drying is used as the mass of the solid particles.

B-1.08 Density of Split-Barrel Samples

The density of ring and tube samples, which were obtained using a split-barrel sampler, were determined in accordance with ASTM D2937. The results of these tests are provided on the boring logs in Appendix A.

B-1.09 Atterberg Limits

The liquid limit, plastic limit, and the plasticity index of the major soil types encountered in the test holes were determined using the standard test methods of ASTM D4318.

B-1.10 Direct Shear

Direct shear test was performed on a representative sample of the major soil types encountered in the test holes

using the standard test method of ASTM D3080 (consolidated and drained). Test was performed on remolded samples. Remolded samples were tested at 90 percent relative compaction. The test results are included in this Appendix B.

Shear tests were performed on a direct shear machine of the strain-controlled type. To simulate possible adverse field conditions, the samples were saturated prior to shearing. Several samples were sheared at varying normal loads and the results plotted to establish the angle of the internal friction and cohesion of the tested samples.

B-1.11 Test Results

Test results for all laboratory tests performed on the subject project are presented in this appendix. For a sample-by-sample description, see the logs presented in Appendix A.

MAXIMUM DENSITY - OPTIMUM MOISTURE

(Test Method: ASTM D1557)

Sample Number	Optimum Moisture (Percent)	Maximum Density (lbs/ft^3)
B1 @ 0-5 ft	9.7	120.1
B2 @ 0-5 ft	13.0	122.0
B3 @ 0-5 ft	10.2	121.9
B5 @ 0-5 ft	12.7	116.5

EXPANSION INDEX

(Test Method: ASTM D4829)

Sample Number	Expansion Index	Classification
B-1 @ 0-5 ft	0	Very Low
B-5 @ 0-5 ft	0	Very Low

SOLUBLE SULFATES

(California Test Methods: 417 & 422)

Sample Number	Soluble Sulfate (ppm)	Chloride Content (ppm)
B-2 @ 0-5 ft	46	36
B-4 @ 0-5 ft	61	26

SOIL REACTIVITY (pH) AND MINIMUM RESISTIVITY

(California Test Method: 643)

Sample Number	pH	Minimum Resistivity (Ohm-cm)
B-2 @ 0-5 ft	8.9	8658
B-4 @ 0-5 ft	8.7	3260

ATTERBERG LIMITS

(Test Method: ASTM D4318)

Sample Number	Liquid Limit (Percent)	Plastic Limit (Percent)	Plasticity Index (Percent)	Water Content (Percent)
B-3 @ 15 ft	42	37	5	12.5
B-6 @ 12.5 ft	61	54	7	54.5

APPENDIX C

GENERAL EARTHWORK
AND
GRADING SPECIFICATIONS

GENERAL EARTHWORK AND GRADING SPECIFICATIONS

C-1.00 GENERAL DESCRIPTION

C-1.01 Introduction

These specifications present our general recommendations for earthwork and grading as shown on the approved grading plans for the subject project. These specifications shall cover all clearing and grubbing, removal of existing structures, preparation of land to be filled, filling of the land, spreading, compaction and control of the fill, and all subsidiary work necessary to complete the grading of the filled areas to conform with the lines, grades and slopes as shown on the approved plans.

The recommendations contained in the geotechnical report of which these general specifications are a part of shall supersede the provisions contained hereinafter in case of conflict.

C-1.02 Laboratory Standard and Field Test Methods

The laboratory standard used to establish the maximum density and optimum moisture shall be ASTM D1557.

The insitu density of earth materials (field compaction tests) shall be determined by the sand cone method (ASTM D1556), direct transmission nuclear method (ASTM D2922) or other test methods as considered appropriate by the geotechnical consultant.

Relative compaction is defined, for purposes of these specifications, as the ratio of the in-place density to the maximum density as determined in the previously mentioned laboratory standard.

C-2.00 Clearing

C-2.01 Surface Clearing

All structures marked for removal, timber, logs, trees, brush and other rubbish shall be removed and disposed of off the site. Any trees to be removed shall be pulled in such a manner so as to remove as much of the root system as possible.

C-2.02 Subsurface Removals

A thorough search should be made for possible underground storage tanks and/or septic tanks and cesspools. If found, tanks should be removed and cesspools pumped dry.

Any concrete irrigation lines shall be crushed in place and all metal underground lines shall be removed from the site.

C-2.03 Backfill of Cavities

All cavities created or exposed during clearing and grubbing operations or by previous use of the site shall be cleared of deleterious material and backfilled with native soils or other materials approved by the soil engineer. Said backfill shall be compacted to a minimum of 90% relative compaction.

C-3.00 ORIGINAL GROUND PREPARATION

C-3.01 Stripping of Vegetation

After the site has been properly cleared, all vegetation and topsoil containing the root systems of former vegetation shall be stripped from areas to be graded. Materials removed in this stripping process may be used as fill in areas designated by the soil engineer, provided the vegetation is mixed with a sufficient amount of soil to assure that no appreciable settlement or other detriment will occur due to decaying of the organic matter. Soil materials containing more than 3% organics shall not be used as structural fill.

C-3.02 Removals of Non-Engineered Fills

Any non-engineered fills encountered during grading shall be completely removed and the underlying ground shall be prepared in accordance to the recommendations for original ground preparation contained in this section. After cleansing of any organic matter the fill material may be used for engineered fill.

C-3.03 Overexcavation of Fill Areas

The existing ground in all areas determined to be satisfactory for the support of fills shall be scarified to a minimum depth of 6 inches. Scarification shall continue until the soils are broken down and free from lumps or clods and until the scarified zone is uniform. The moisture content of the scarified zone shall be adjusted to within 2% of optimum moisture. The scarified zone shall then be uniformly compacted to 90% relative compaction.

Where fill material is to be placed on ground with slopes steeper than 5:1 (H:V) the sloping ground shall be benched. The lowermost bench shall be a minimum of 15 feet wide, shall be a minimum of 2 feet deep, and shall expose firm material as determined by the geotechnical consultant. Other benches shall be excavated to firm material as determined by the geotechnical consultant and shall have a minimum width of 4 feet.

Existing ground that is determined to be unsatisfactory for the support of fills shall be overexcavated in accordance to the recommendations contained in the geotechnical report of which these general specifications are a part.

C-4.00 FILL MATERIALS

C-4.01 General

Materials for the fill shall be free from vegetable matter and other deleterious substances, shall not contain rocks or lumps of a greater dimension than is recommended by the geotechnical consultant, and shall be approved by the geotechnical consultant. Soils of poor gradation, expansion, or strength properties shall be placed in areas designated by the geotechnical consultant or shall be mixed with other soils providing satisfactory fill material.

C-4.02 Oversize Material

Oversize material, rock, or other irreducible material with a maximum dimension greater than 12 inches shall not be placed in fills, unless the location, materials, and disposal methods are specifically approved by the geotechnical consultant. Oversize material shall be placed in such a manner that nesting of oversize material does not occur and in such a manner that the oversize material is completely surrounded by fill material compacted to a minimum of

90% relative compaction. Oversize material shall not be placed within 10 feet of finished grade without the approval of the geotechnical consultant.

C-4.03 Import

Material imported to the site shall conform to the requirements of Section 4.01 of these specifications. Potential import material shall be approved by the geotechnical consultant prior to importation to the subject site.

C-5.00 Placing and Spreading of Fill

C-5.01 Fill Lifts

The selected fill material shall be placed in nearly horizontal layers which when compacted will not exceed approximately 6 inches in thickness. Thicker lifts may be placed if testing indicates the compaction procedures are such that the required compaction is being achieved and the geotechnical consultant approves their use.
Each layer shall be spread evenly and shall be thoroughly blade mixed during the spreading to insure uniformity of material in each layer.

C-5.02 Fill Moisture

When the moisture content of the fill material is below that recommended by the soils engineer, water shall then be added until he moisture content is as specified to assure thorough bonding during the compacting process.

When the moisture content of the fill material is above that recommended by the soils engineer, the fill material shall be aerated by blading or other satisfactory methods until the moisture content is as specified.

C-5.03 Fill Compaction

After each layer has been placed, mixed, and spread evenly, it shall be thoroughly compacted to not less than 90% relative compaction. Compaction shall be by sheepsfoot rollers, multiple-wheel pneumatic tired rollers, or other types approved by the soil engineer.

Rolling shall be accomplished while the fill material is at the specified moisture content. Rolling of each layer shall be continuous over its entire area and the roller shall make sufficient trips to insure that the desired density has been obtained.

C-5.04 Fill Slopes

Fill slopes shall be compacted by means of sheepsfoot rollers or other suitable equipment. Compacting of the slopes may be done progressively in increments of 3 to 4 feet in fill height. At the completion of grading, the slope face shall be compacted to a minimum of 90% relative compaction. This may require track rolling or rolling with a grid roller attached to a tractor mounted side-boom.

Slopes may be over filled and cut back in such a manner that the exposed slope faces are compacted to a minimum of 90% relative compaction.

The fill operation shall be continued in six inch (6") compacted layers, or as specified above, until the fill has been brought to the finished slopes and grades as shown on the accepted plans.

C-5.05 Compaction Testing

Field density tests shall be made by the geotechnical consultant of the compaction of each layer of fill. Density tests shall be made at locations selected by the geotechnical consultant.

Frequency of field density tests shall be not less than one test for each 2.0 feet of fill height and at least every one thousand cubic yards of fill. Where fill slopes exceed four feet in height their finished faces shall be tested at a frequency of one test for each 1000 square feet of slope face.

Where sheepsfoot rollers are used, the soil may be disturbed to a depth of several inches. Density reading shall be taken in the compacted material below the disturbed surface. When these readings indicate that the density of any layer of fill or portion thereof is below the required density, the particular layer or portion shall be reworked until the required density has been obtained.

C-6.00 SUBDRAINS

C-6.01 Subdrain Material

Subdrains shall be constructed of a minimum 4-inch diameter pipe encased in a suitable filter material. The subdrain pipe shall be Schedule 40 Acrylonitrile Butadiene Styrene (ABS) or Schedule 40 Polyvinyl Chloride Plastic (PVC) pipe or approved equivalent. Subdrain pipe shall be installed with perforations down. Filter material shall consist of 3/4" to 1 1/2" clean gravel wrapped in an envelope of filter fabric consisting of Mirafi 140N or approved equivalent.

C-6.02 Subdrain Installation

Subdrain systems, if required, shall be installed in approved ground to conform the approximate alignment and details shown on the plans or herein. The subdrain locations shall not be changed or modified without the approval of the geotechnical consultant. The geotechnical consultant may recommend and direct changes in the subdrain line, grade or material upon approval by the design civil engineer and the appropriate governmental agencies.

C-7.00 EXCAVATIONS

C-7.01 General

Excavations and cut slopes shall be examined by the geotechnical consultant. If determined necessary by the geotechnical consultant, further excavation or overexcavation and refilling of overexcavated areas shall be performed, and/or remedial grading of cut slopes shall be performed.

C-7.02 Fill-Over-Cut Slopes

Where fill-over-cut slopes are to be graded the cut portion of the slope shall be made and approved by the geotechnical consultant prior to placement of materials for construction of the fill portion of the slope.

C-8.00 Trench Backfill

C-8.01 General

Trench backfill within street right of ways shall be compacted to 90% relative compaction as determined by the ASTM D1557 test method. Backfill may be jetted as a means of initial compaction; however, mechanical compaction will be required to obtain the required percentage of relative compaction. If trenches are jetted, there must be a suitable delay for drainage of excess water before mechanical compaction is applied.

C-9.00 Seasonal Limits

C-9.01 General

No fill material shall be placed, spread or rolled while it is frozen or thawing or during unfavorable weather conditions. When the work is interrupted by heavy rain, fill operations shall not be resumed until field tests by the soils engineer indicate that the moisture content and density of the fill are as previously specified.

C-10.00 Supervision

C-10.01 Prior to Grading

The site shall be observed by the geotechnical consultant upon completion of clearing and grubbing, prior to the preparation of any original ground for preparation of fill.

The supervisor of the grading contractor and the field representative of the geotechnical consultant shall have a meeting and discuss the geotechnical aspects of the earthwork prior to commencement of grading.

C-10.02 During Grading

Site preparation of all areas to receive fill shall be tested and approved by the geotechnical consultant prior to the placement of any fill.

The geotechnical consultant or his representative shall observe the fill and compaction operations so that he can provide an opinion regarding the conformance of the work to the recommendations

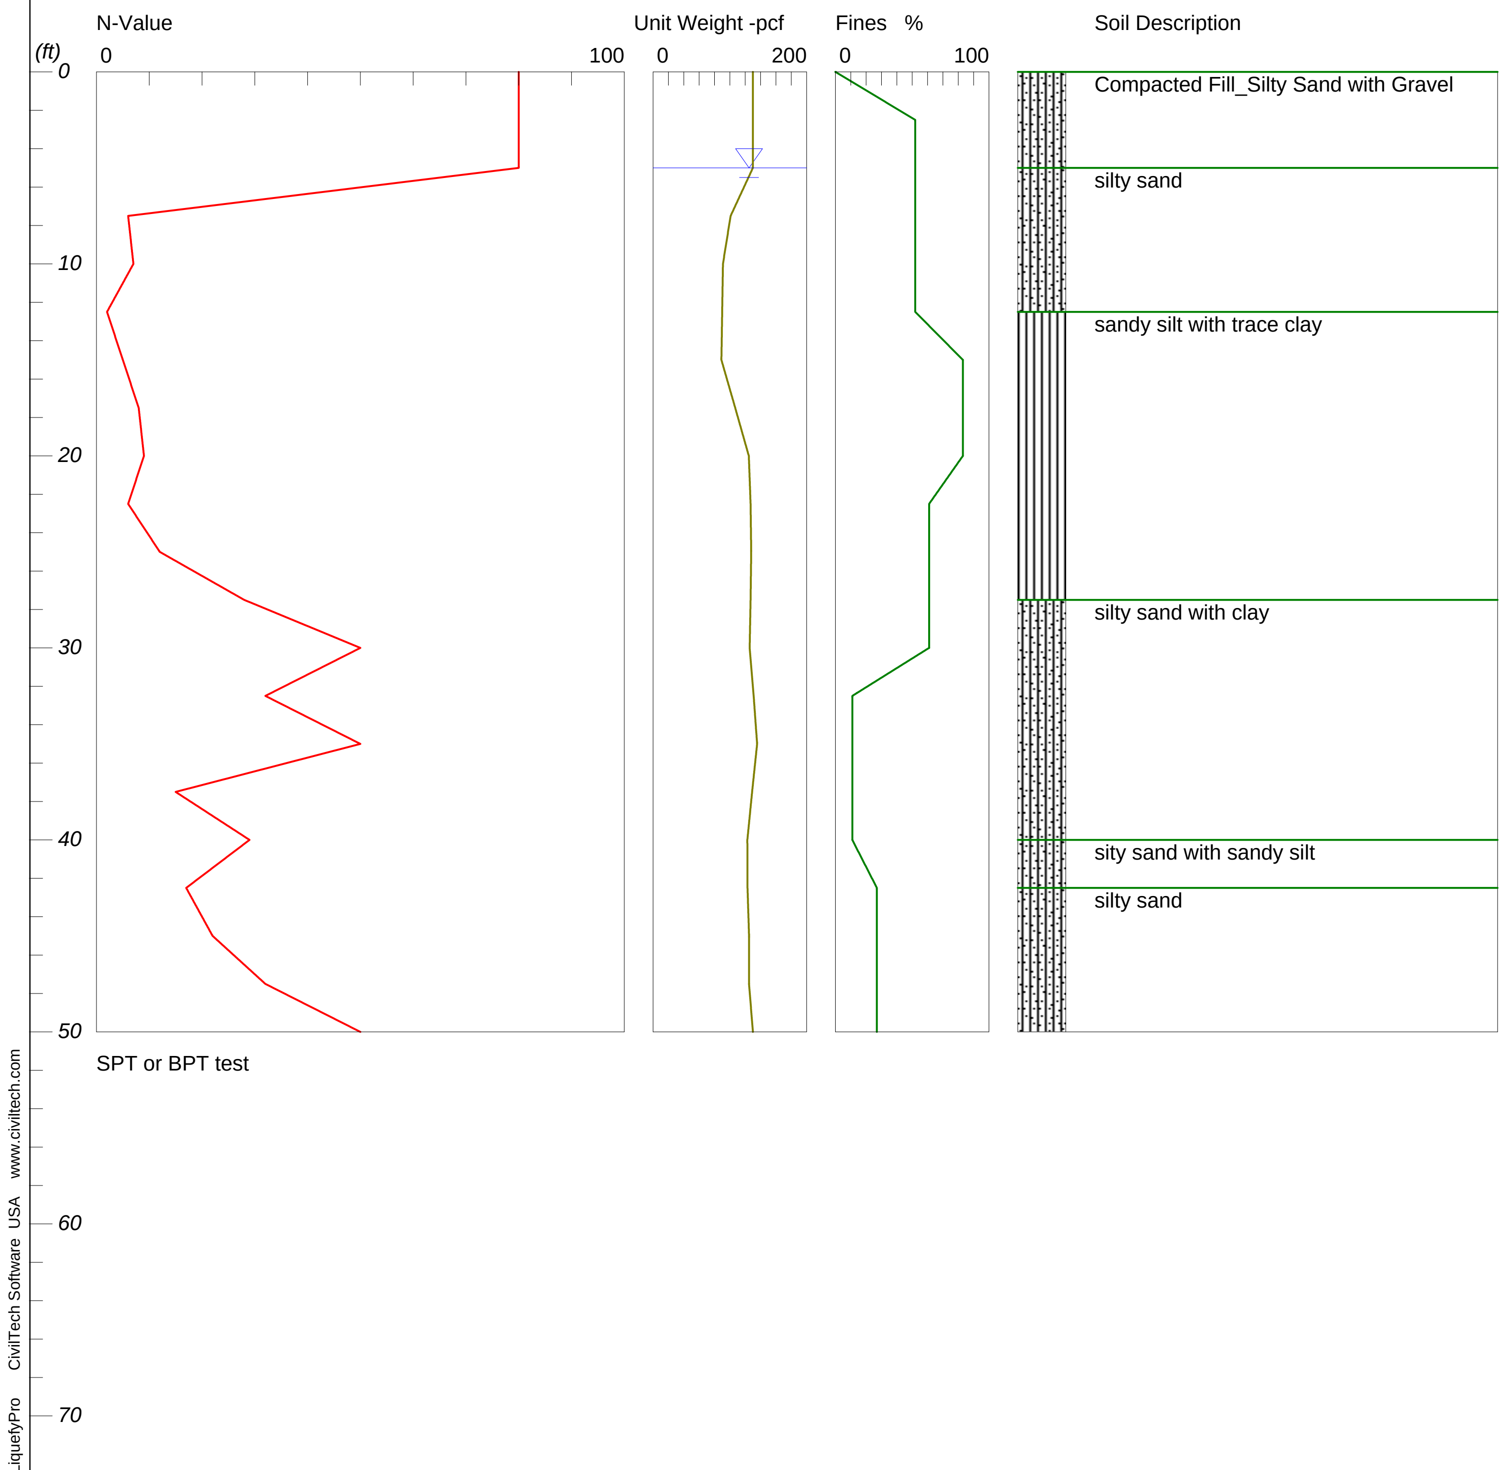
* F.S.<1, Liquefaction Potential Zone
(F.S. is limited to 5, CRR is limited to 2, CSR is limited to 2)

Units: Unit: qc, fs, Stress or Pressure = atm (1.0581tsf); Unit Weight = pcf; Depth = ft; Settlement = in.

---

1 atm (atmosphere) = 1 tsf (ton/ft2)



CRRm	Cyclic resistance ratio from soils
CSRsf	Cyclic stress ratio induced by a given earthquake (with user request factor of safety)
F.S.	Factor of Safety against liquefaction, F.S.=CRRm/CSRsf
S_sat	Settlement from saturated sands
S_dry	Settlement from Unsaturated Sands
S_all	Total Settlement from Saturated and Unsaturated Sands
NoLiq	No-Liquefy Soils

Input File Name: G:_Projects\2020\20G-0418\Liqefaction Analysis\20G-0418 b6.liq
Title: Solemo 13 Acres
Subtitle: 20G-0418-0

Surface Elev.=244
Hole No.=B-6
Depth of Hole= 50.00 ft
Water Table during Earthquake= 5.00 ft
Water Table during In-Situ Testing= 60.00 ft
Max. Acceleration= 0.66 g
Earthquake Magnitude= 6.81

Input Data:
Surface Elev.=244
Hole No.=B-6
Depth of Hole=50.00 ft
Water Table during Earthquake= 5.00 ft
Water Table during In-Situ Testing= 60.00 ft
Max. Acceleration=0.66 g
Earthquake Magnitude=6.81
No-Liquefiable Soils: Based on Analysis

1. SPT or BPT Calculation.
2. Settlement Analysis Method: Tokimatsu, M-correction
3. Fines Correction for Liquefaction: Modify Stark/Olson
4. Fine Correction for Settlement: During Liquefaction*
5. Settlement Calculation in: All zones*
6. Hammer Energy Ratio, Ce = 1.25
7. Borehole Diameter, Cb= 1.15
8. Sampling Method, Cs= 1.2
9. User request factor of safety (apply to CSR) , User= 1.1
   Plot one CSR curve (fs1=User)
10. Use Curve Smoothing: Yes*
* Recommended Options

In-Situ Test Data:

Depth ft	SPT	gamma pcf	Fines %

50.00	50.00	130.00	27.00

Output Results:

Settlement of Saturated Sands=3.23 in.
Settlement of Unsaturated Sands=0.01 in.
Total Settlement of Saturated and Unsaturated Sands=3.23 in.
Differential Settlement=1.616 to 2.133 in.

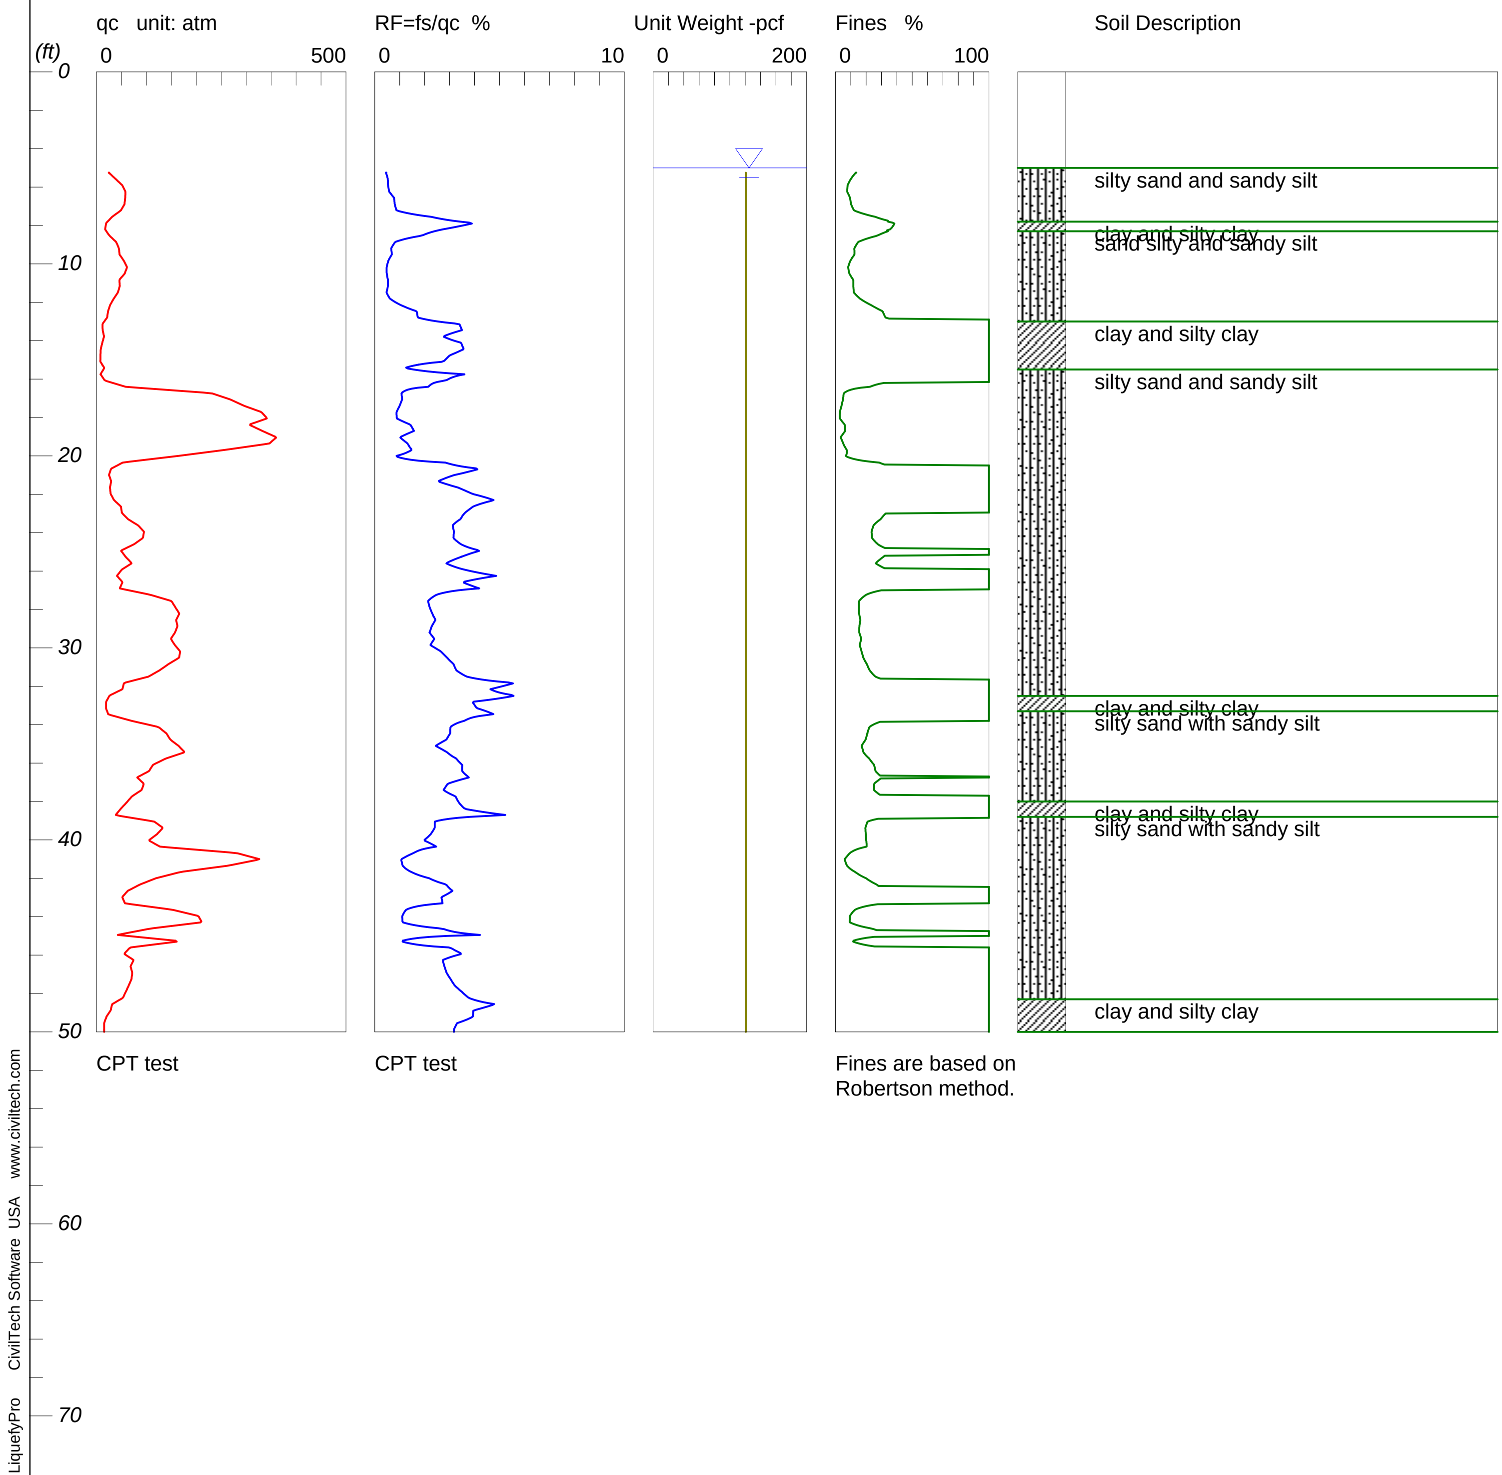
* F.S.<1, Liquefaction Potential Zone
(F.S. is limited to 5, CRR is limited to 2, CSR is limited to 2)

Units: Unit: qc, fs, Stress or Pressure = atm (1.0581tsf); Unit Weight = pcf; Depth = ft; Settlement = in.

---

1 atm (atmosphere) = 1 tsf (ton/ft2)



CRRm	Cyclic resistance ratio from soils
CSRsf	Cyclic stress ratio induced by a given earthquake (with user request factor of safety)
F.S.	Factor of Safety against liquefaction, F.S.=CRRm/CSRsf
S_sat	Settlement from saturated sands
S_dry	Settlement from Unsaturated Sands
S_all	Total Settlement from Saturated and Unsaturated Sands
NoLiq	No-Liquefy Soils

LIQUEFACTION ANALYSIS SUMMARY

****

Font: Courier New, Regular, Size 8 is recommended for this report.
Licensed to , 8/27/2020 1:31:07 PM

Input File Name: G:_Projects\2020\20G-0418\Liqefaction Analysis\20G-0418 CPT 1.liq
Title: Solemo 13 Acres
Subtitle: 20G-0418-0

Surface Elev.=244
Hole No.=CPT-1
Depth of Hole= 50.00 ft
Water Table during Earthquake= 5.00 ft
Water Table during In-Situ Testing= 60.00 ft
Max. Acceleration= 0.66 g
Earthquake Magnitude= 6.81

Input Data:
Surface Elev.=244
Hole No.=CPT-1
Depth of Hole=50.00 ft
Water Table during Earthquake= 5.00 ft
Water Table during In-Situ Testing= 60.00 ft
Max. Acceleration=0.66 g
Earthquake Magnitude=6.81
No-Liquefiable Soils: Based on Analysis

1. CPT Calculation Method: Modify Robertson*
2. Settlement Analysis Method: Tokimatsu, M-correction
3. Fines Correction for Liquefaction: Stark/Olson et al.*
4. Fine Correction for Settlement: During Liquefaction*
5. Settlement Calculation in: All zones*
9. User request factor of safety (apply to CSR) , User= 1.1
   Plot one CSR curve (fs1=User)
10. Use Curve Smoothing: Yes*
* Recommended Options

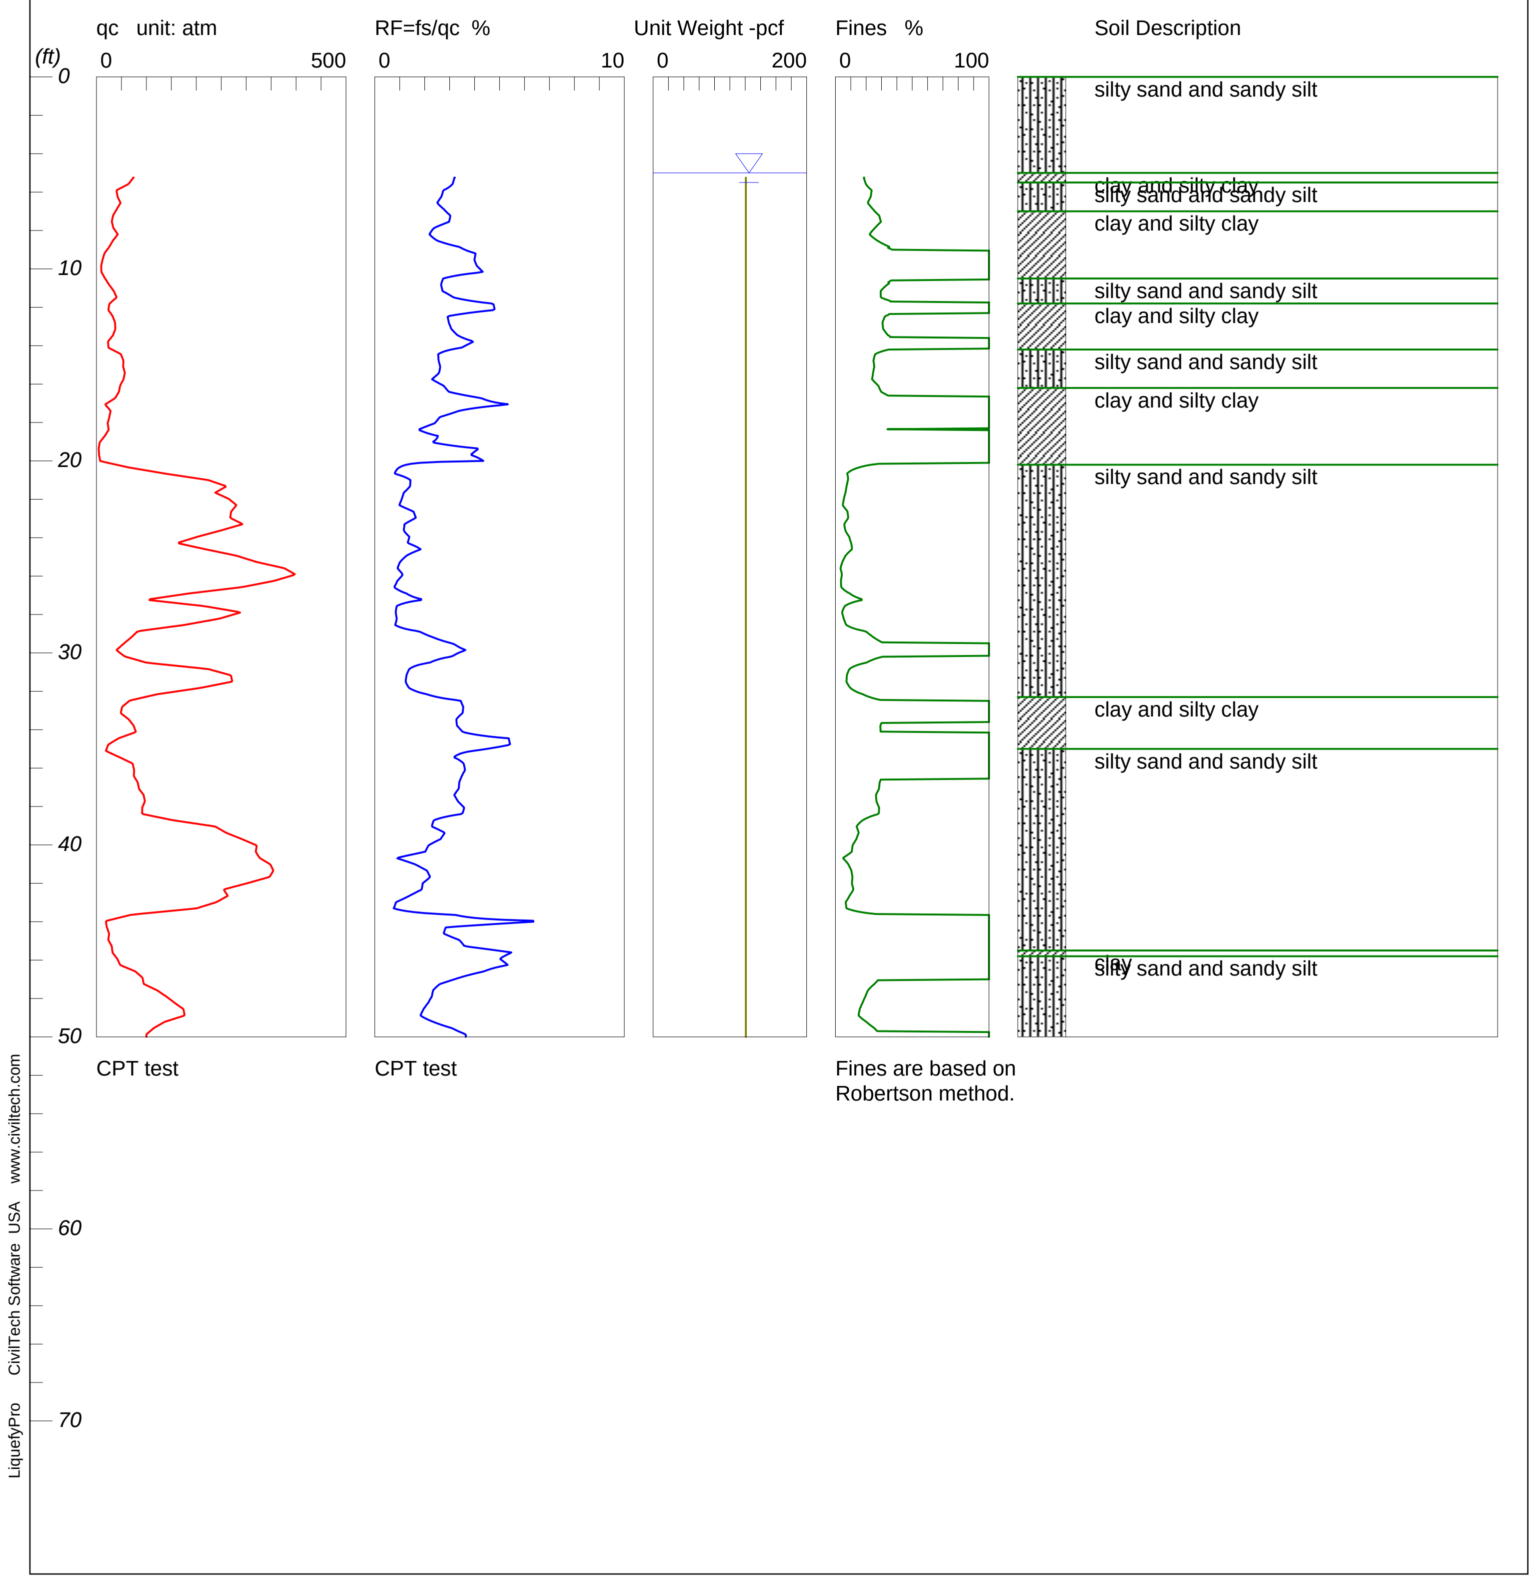
* F.S.<1, Liquefaction Potential Zone
(F.S. is limited to 5, CRR is limited to 2, CSR is limited to 2)

Units: Unit: qc, fs, Stress or Pressure = atm (1.0581tsf); Unit Weight = pcf; Depth = ft; Settlement = in.

---



1 atm (atmosphere) = 1 tsf (ton/ft2)

CRRm	Cyclic resistance ratio from soils
CSRsf	Cyclic stress ratio induced by a given earthquake (with user request factor of safety)
F.S.	Factor of Safety against liquefaction, F.S.=CRRm/CSRsf
S_sat	Settlement from saturated sands
S_dry	Settlement from Unsaturated Sands
S_all	Total Settlement from Saturated and Unsaturated Sands
NoLiq	No-Liquefy Soils

Input File Name: G:_Projects\2020\20G-0418\Liqefaction Analysis\20G-0418 CPT2.liq
Title: Solemo 13 Acres
Subtitle: 20G-0418-0

Surface Elev.=240
Hole No.=CPT-2
Depth of Hole= 50.00 ft
Water Table during Earthquake= 5.00 ft
Water Table during In-Situ Testing= 60.00 ft
Max. Acceleration= 0.66 g
Earthquake Magnitude= 6.81

Input Data:
Surface Elev.=240
Hole No.=CPT-2
Depth of Hole=50.00 ft
Water Table during Earthquake= 5.00 ft
Water Table during In-Situ Testing= 60.00 ft
Max. Acceleration=0.66 g
Earthquake Magnitude=6.81
No-Liquefiable Soils: Based on Analysis

1. CPT Calculation Method: Modify Robertson*
2. Settlement Analysis Method: Tokimatsu, M-correction
3. Fines Correction for Liquefaction: Stark/Olson et al.*
4. Fine Correction for Settlement: During Liquefaction*
5. Settlement Calculation in: All zones*
9. User request factor of safety (apply to CSR) ,   User= 1.1
   Plot one CSR curve (fs1=User)
10. Use Curve Smoothing: Yes*
* Recommended Options

In-Situ Test Data:

Modify Robertson method generates Fines from qc/fs. Inputted Fines are not

relevant.

Output Results:
Settlement of Saturated Sands=1.01 in.
Settlement of Unsaturated Sands=0.00 in.
Total Settlement of Saturated and Unsaturated Sands=1.01 in.
Differential Settlement=0.503 to 0.664 in.

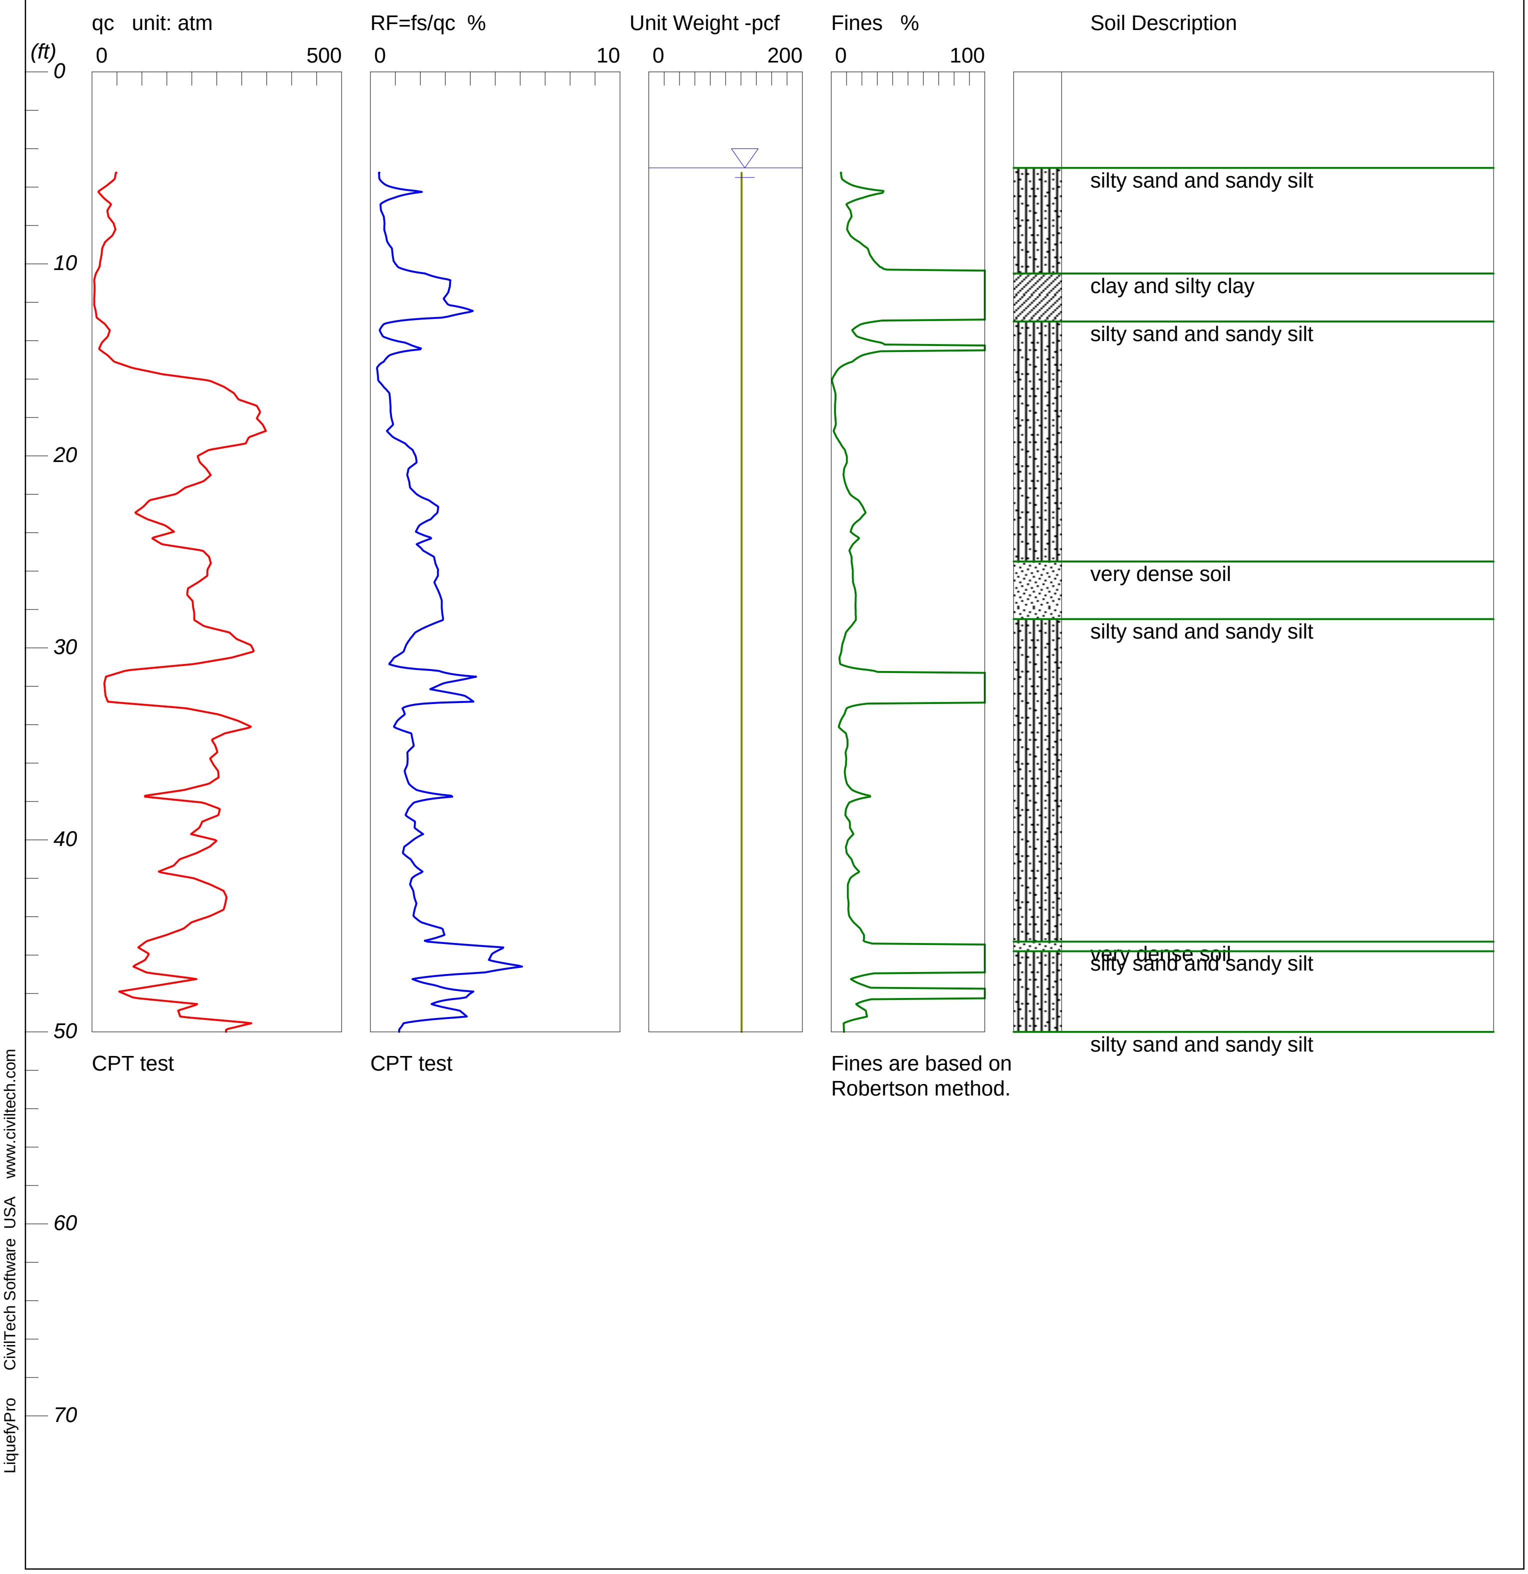
* F.S.<1, Liquefaction Potential Zone
(F.S. is limited to 5, CRR is limited to 2, CSR is limited to 2)

Units: Unit: qc, fs, Stress or Pressure = atm (1.0581tsf); Unit Weight = pcf; Depth = ft; Settlement = in.

---



1 atm (atmosphere) = 1 tsf (ton/ft2)

CRRm	Cyclic resistance ratio from soils
CSRsf	Cyclic stress ratio induced by a given earthquake (with user request factor of safety)
F.S.	Factor of Safety against liquefaction, F.S.=CRRm/CSRsf
S_sat	Settlement from saturated sands
S_dry	Settlement from Unsaturated Sands
S_all	Total Settlement from Saturated and Unsaturated Sands
NoLiq	No-Liquefy Soils

Input File Name: G:_Projects\2020\20G-0418\Liqefaction Analysis\20G-0418 CPT3.liq
Title: Solemo 13 Acres
Subtitle: 20G-0418-0

Surface Elev.=244
Hole No.=CPT-3
Depth of Hole= 50.00 ft
Water Table during Earthquake= 5.00 ft
Water Table during In-Situ Testing= 60.00 ft
Max. Acceleration= 0.66 g
Earthquake Magnitude= 6.81

Input Data:
Surface Elev.=244
Hole No.=CPT-3
Depth of Hole=50.00 ft
Water Table during Earthquake= 5.00 ft
Water Table during In-Situ Testing= 60.00 ft
Max. Acceleration=0.66 g
Earthquake Magnitude=6.81
No-Liquefiable Soils: Based on Analysis

1. CPT Calculation Method: Modify Robertson*
2. Settlement Analysis Method: Tokimatsu, M-correction
3. Fines Correction for Liquefaction: Stark/Olson et al.*
4. Fine Correction for Settlement: During Liquefaction*
5. Settlement Calculation in: All zones*
9. User request factor of safety (apply to CSR) ,   User= 1.1
   Plot one CSR curve (fs1=User)
10. Use Curve Smoothing: Yes*
* Recommended Options

In-Situ Test Data:

Modify Robertson method generates Fines from qc/fs. Inputted Fines are not

relevant.

Output Results:

Settlement of Saturated Sands=2.10 in.
Settlement of Unsaturated Sands=0.00 in.
Total Settlement of Saturated and Unsaturated Sands=2.10 in.
Differential Settlement=1.050 to 1.387 in.

Geologist Staff

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1.0 SUMMARY

Stantec Consulting Services Inc. (Stantec) has completed a Phase I Environmental Site Assessment (ESA) and Limited Subsurface Assessment report of the property located at 2540 Rosemead Boulevard, South El Monte, California 91733 (the "Property"), on behalf of California T.C. Group, L.P. (the "Client"). California T.C. Group, L.P. (the "User") has been designated as the User of this report.

The Phase I ESA was conducted in conformance with the requirements of American Society for Testing and Materials (ASTM) Designation E 1527-13, and All Appropriate Inquiry (AAI) as defined by the US-EPA in Title 40 of the Code of Federal Regulations, Part 312. Any exceptions to, or deletions from, the ASTM or AAI practice are described in Section 2.3.

The Property consists of eleven parcels, ten of which are rectangular. The parcels are located between Rosemead Boulevard and Chico Avenue. The Property is currently vacant and was formerly operated by the Starlite Swap Meet, a residence, and Master Designs Furniture. The total Property area is approximately 17.37 acres. The Property is located in a suburban area characterized by industrial properties and residences. The terrain of the Property appeared to be generally sloping to the west. A Property location map is illustrated on Figure 1. A Property map illustrating the main features of the Property is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

The Property appears to have first been used as agricultural land dating back to 1928. By 1938 a dairy appeared to have been developed on the western portion of the Property, and residences were developed on the eastern portion. By 1952 the western portion of the Property was redeveloped with a drive-in theater. By 1972 the eastern portion of the Property was redeveloped with two commercial structures and two large parking lots. By 1989 two of the three residences at the Property were demolished. By 2002 the screen of the drive-in theater was removed. Previous assessments performed at the Property are summarized below.

Methane Investigation

In August and September 2015, Hillmann Consulting conducted subsurface investigations which advanced a total of 26 soil borings and 15 soil vapor probes across the Property. Results of this subsurface assessment detected elevated concentrations of methane in the east-central portion of the subject Property. No significant concentrations of petroleum hydrocarbons were detected in the soil matrix samples and, other than arsenic, concentrations of metals in soil appear to represent expected background levels. Although arsenic was detected at a concentration of 8.2 milligrams per kilogram (mg/kg), this is below the generally accepted statistically derived background for arsenic (12 mg/kg) as accepted by the California Department of Toxic Substances Control (DTSC) for school sites. Therefore, metals and total petroleum hydrocarbons were not identified as contaminates of concern to the Property by Hillmann.

Hillmann did detect elevated concentrations of methane at several locations, with the maximum concentration detected at 620,000 parts per million by volume (ppmv). The source of the elevated methane was not determined during this assessment and the concentrations of methane indicate a risk for accumulation under any proposed buildings.

Summary
October 12, 2021

On June 13, 2018, Fulcrum Resources Environmental (FRE) contracted Munoz Drilling, Inc. of Santa Ana, California to advance soil borings to assess possible contaminants in soil and soil vapor at the subject property. The purpose of this investigation was to further evaluate the presence of methane previously identified at the subject Property by Hillmann. FRE reported concentrations of methane ranging from less than 10 to a peak level of 235,000 ppmv in boring SB31-10 in the eastern portion of the Property. The highest concentrations of methane were detected in the ten-foot soil vapor samples form borings SB31 (235,000 ppmv), SB33 (162,000 ppmv), and SB34 (109,000 ppmv). The elevated concentration of methane detected in the subsurface appear to be in close proximity to a gas pipeline leading to the snack shop from the maintenance building. It was suspected by FRE, that a leaking pipeline was the potential source of the elevated methane at the southeastern portion of the Property.

Following the June 2018 investigation by FRE, the SoCal Gas Company closed and locked out the gas pipeline valve located at the maintenance building, terminating gas service to the snack shop.

Stantec was retained to further assess the methane concerns at the subject Property. Stantec completed a Phase I ESA and limited subsurface assessment between July 16 and 24, 2020, to assess possible contaminants associated with the recognized environmental conditions (RECs) identified in the previous Property assessment reports referenced above. Soil borings, soil vapor probe, and test pit locations are shown on Figure 3. Stantec installed eleven multi-depth soil vapor sampling probes in borings locations SV-1 through SV-11.

Upon confirmation that the SoCal Gas Company service line was still closed and locked-out since 2018, Stantec installed soil vapor probes at six locations (SV-6 through SV-11) near the gas pipeline with soil vapor probes placed at 5 feet, 10 feet, and 20 feet below bgs on July 16, 2020.

The methane concentrations in the soil vapor probes located near the gas pipeline were measured 2 hours after installation, and then approximately one week later, and ranged between 7,000 ppmv (0.7% by volume) and 66,000 ppmv (6.6 % by volume), with the highest concentration reported in soil vapor probe SV-6 at a depth of 5 feet bgs. The reported concentration did show a decrease in concentration since detection occurred by Hillmann in 2015 and FRE in 2018. However, the concentration detected by Stantec still represented a concern to site development for residential purposes.

To evaluate potential options to reduce the methane concentrations in the subsurface, Stantec conducted a limited pilot test involving excavation of the methane impacted soils. This pilot study was conducted on September 17 and 18, 2020. Stantec provided oversight and air monitoring during the excavation of a 25-foot-wide, 40 feet long and 15 feet deep area to evaluate methane concentration reductions in the soil after excavation. The remedial excavation was located southwest of the natural gas pipeline in the area with the highest methane concentrations reported in the Stantec July 2020 site assessment. The existing soil vapor probes SV-6 through SV-10 were utilized to monitor methane concentrations within the surrounding undisturbed soil during and after the remedial excavation.

Stantec monitored the methane concentrations in the soil vapor probes surrounding the excavation during and after the remedial activities. The vapor probes detected a reduction in methane concentrations in the surrounding soil, but still at elevated levels.

During the excavation process, a three-inch-thick concrete layer was encountered approximately two to three feet bgs across the entire excavation area. Below the concrete layer, Stantec encountered soil consisting of several thin dark silt and clay layers interbedded within the grayish green sand throughout the maximum depth of the excavation of about 15 feet bgs. The excavated soil was field screened, during the excavation and stockpile process, for methane and volatile organic compounds (VOCs) in accordance with SCAQMD Rule 1166, using a GEM 2000 Plus and photoionization detector (PID), respectively. Soil monitoring performed during the excavation reported no measurable concentrations of methane in any of the field readings (i.e. 0.0 % by volume) and VOCs at less than 0.2 ppmv, well below the SCAQMD Rule 1166 permit requirements of 50 ppmv.

All excavated soil was placed on the existing asphalt parking lot near the excavation area. The stockpile was periodically moistened to suppress dust. The final stockpile measured approximately 40 feet wide, 80 feet long and 6 feet high. Upon completion of the remedial excavation, four soil vapor test probes (TR-1 through TP-4) were installed four feet into the stockpile to monitor methane concentrations in the excavated material. Approximately two weeks after the completion of the remedial excavation, no methane (0%) was reported in the four soil vapor test probes installed within the stockpile. The results of the pilot test reported that the excavation process did appear to mitigate the methane detected in the subsurface.

The concentrations of methane in the soil vapor probes (SV-6 through) located in the surrounding undisturbed soil adjacent to the test excavation were reported at 19,000 ppmv to 48,000 ppmv at the end of this limited remedial excavation. Based on the non-detectable methane concentrations (0.0%) in the western, southeast, and northeast corner of the site, the area with elevated methane in the soil appeared to be limited to the eastern-central area of the Property, centrally located between the snack bar, maintenance building, and northeast corner of the Property (Figure 3).

Trenching and Test Pits

In July 2020, during the same time as Stantec's initial methane assessment described above, trenching and Test Pits activities were performed in the eastern-central area of the Property, centrally located between the snack bar, maintenance building, and northeast corner of the Property where the natural gas line was reported, and areas of visibly stained soil were report by the prior site assessments. Stantec trenched alongside the gas line to evaluate the extent of impact soil in these areas and evaluate the potential natural gas leak suspected by Hillmann. Field screening was performed during the trenching activities and twenty (20) soil samples were collected at various Test Pit locations and depths. These soil samples were analyzed for total petroleum hydrocarbons (TPH) by EPA Test Method 8015B. The ten (10) soil samples with the highest TPH results or field screening reading were analyzed for VOCs.

No detections of TPH as gasoline range organics (GRO) or volatile organic compounds (VOCs) were detected above the laboratory reporting limits in of the soil samples (*i.e.* all samples were "non-detect") submitted for laboratory analysis, with the exception of one minor detection of naphthalene at 0.0093 mg/kg in Test Pit Row #3 soil sample TPT-3-200'. The detection of naphthalene is below the residential environmental screening level (ESL) of 0.042 mg/kg.

TPH as diesel range organics (DRO) and TPH as oil range organics (ORO) were detected in Test Pit Row #2 at 120 and 570 mg/kg respectively in soil sample TPT-3-0' and at 570 and 2,400 mg/kg in soil sample

TPT-3-200’. The TPH-DRO and TPH-ORO concentrations from TPT-3-200’ are above the ESL for residential land use of 260 and 1,600 mg/kg.

Upon completion of the soil analysis and testing, the soil was pushed back into the trenches and test pits and wheel-rolled for compaction. Soil removal for this de minimus area near TPT-3-200’ and proper re-compaction of these areas trenches, and Test Pit will be conducted during the development grading.

Adjacent Dry Cleaners and Groundwater Plume

Minor concentrations of VOCs in soil vapor were reported in July 2020, including methylene chloride; carbon disulfide; toluene; xylenes; 4-ethyltoluene; 1,3,5- Trimethylbenzene (TMB); 1,2,4-TMB; and 1,1,1-Trichloroethane (TCA) detected throughout the Property at concentrations below regulatory screening levels for residential uses.

Shallow soil vapor samples collected from the 5-feet interval showed detections of benzene at 16 and 18 micrograms per cubic meter (ug/m3) in soil vapor samples SV-3-5 and SV-6-5, respectively. Trichloroethene (TCE) and ethylbenzene were detected at 52 and 110 ug/m3 in soil vapor sample SV-3-5, respectively. Tetrachloroethene (PCE) was detected at 22 and 69 ug/m3 in soil vapor samples SV-1-5 and SV-3-5. The detected concentrations were above the RSL using an attenuation factor of 0.03, which is currently applied by the appropriate regulatory agency for vapor intrusion (VI) screening purposes. However, these concentrations are below the Residential Screening Level (RSL) for Soil Vapor using Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) Note 3 with an attenuation factor of 0.001 used by DTSC to evaluate risk.

Historical Agricultural Use

Stantec collected three composite soil samples (Comp-1, Comp-2, and Comp-3) from the 0.5-foot interval and the 3-feet interval on July 15, 2021. The shallow soil samples were analyzed for Organochlorine Pesticides (OCPs) by EPA Test Method 8081A and arsenic and lead by EPA Test Method 6010B.

Organochlorine pesticides (4,4’-DDE, alpha-Chlordane, Chlordane, and dieldrin) were detected at minor concentrations that are below their respective DTSC HERO Note 3 screening level and EPA RSL for residential land use. Additionally, the cumulative concentrations are below the California Hazardous Waste Level for these compounds. These soil results are summarized on Table 6.

All detected metals concentrations were within typical naturally occurring California background concentration ranges, and do not exceed DTSC HERO Note 3 or EPA RSLs for residential use. Arsenic was detected at concentrations ranging from 4.8 to 9.8 mg/kg, which are within the Southern California regional background range of 0.6 to 11 mg/kg. Lead was detected at concentrations ranging from 4.9 to 35 mg/kg which are below the DTSC HERO Note 3 screening level of 80 mg/kg. Based on the composite soil samples results, historical agricultural use does not represent an environmental concern and no further investigation appears warranted related to these issues.

Demo Activities March – July 2001

To eliminate the potential of vandalism and squatting of vacant structures, the property owner secured a demolition permit to remove the snack bar area structures, and maintenance building located in the southeast corner of the Property and locked-out natural gas line along with a three-inch-thick concrete layer located two to three feet bgs adjacent to the buildings.

On March 16, 2021, during the removal of the three-inch thick concrete layer an abandoned Underground Storage Tank (UST) was discovered northeast of the natural gas line. Soil samples were collected at both end of the UST to a depth of 10 feet below the invent of the tank and analyzed for TPH and VOC by EPA Test Method 8015 and 8260B, respectively. TPH-GRO, TPH-DRO, and TPH-ORO were not reported above the laboratory reporting limit in any of the six soil samples. Trace amounts of VOCs including, 1,2,4-Trimethylbenzene (TMB). 1,3,5-TMB, ethylbenzene, and naphthalene were reported in two of the soil samples collected beneath the UST. The reported VOCs were slightly above the laboratory reporting limits and orders of magnitude below their corresponding residential screening limits. Given that the UST was completely empty, and the recent soil sample result collected directly below the tank indicated no release had occurred that exceed current cleanup requirements, the City of South El Monte approved removal of the UST under the existing demo permit on April 19, 2021. No additional investigation or assessment pertaining to the UST was required by the City of South El Monte.

It should be noted that, several historical record searches have been performed over the years for the Property and no evidence of any past or present USTs were reported in these prior reports. Given that the UST, located in the area of the former residences on the eastern portion of the Property was excavated as part of the demo activities, the likelihood of additional USTs being discovered during future grading activities is significantly decreased. A Soil Management Plan (SMP) should be created and distributed to the grading contractor to inform them of the proper guidelines should another USTs be discovered during grading.

At the completion of the demolition activities, Stantec advanced fifteen (15) soil vapor points throughout the eastern-central area to evaluate the remaining methane concentrations at the Property (Figure 3). Over the span of four months between March 19 and July 19, 2021, methane concentrations decreased from a high of 5.0% by volume in soil vapor probe SB31 on March 22, 2021, to less than the reporting limit of 0.0% by July 19, 2021, in all post-demo soil vapor probes across the eastern-central area of the Property.

In general, significant methane concentrations were only reported in the eastern-central area of the Property and methane concentrations experienced a decreasing trend through the demo activities of the asphalt cover and three-inch thick concrete layer as they were removed from the eastern-central area of the Property. Final readings collected in July of 2021 reported nonreportable levels of methane within the eastern-central area of the Property (**Table 2**). Based on the final results of combustible gas survey completed at the eastern-central area as of July 2021 along with the prior methane readings in the soil vapor probes in the remaining areas of the Property, no methane was detected at the Property. Since methane levels were not found above typical levels of concern (generally considered to be 0.5%, or 5,000 ppmV methane), Stantec recommends no further assessment regarding methane be required.

Summary
October 12, 2021

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527 of 2540 Rosemead Boulevard, South El Monte, California 91733, or the “Property”. Any exceptions to, or deletions from, this practice are described in the Data Gaps section of this report. This assessment has revealed the following evidence of recognized environmental conditions (RECs) in connection with the Property:

- **San Gabriel Valley Groundwater Plume**. The Property lies within Area 1 of the San Gabriel Valley Regional Groundwater Superfund plume. The groundwater in this area is contaminated with elevated levels of PCE, TCE, carbon tetrachloride, and other VOCs from multiple point sources within the San Gabriel Valley. Because groundwater in this area of the Property is reported at approximately 50 feet bgs, Stantec initially identified this plume as a REC due to the potential for elevated soil vapor concentrations to exist beneath the site. That issue no longer appears to be a significant concern, given the low levels of detected VOC concentrations in soil vapor; however, Stantec recommends either soil vapor barriers be installed, or a post grading soil vapor survey be performed in connection with future development to confirm the absence of elevated soil vapor concentrations. In addition, due to the fact that the responsible parties have been identified and are addressing the contamination, as well as the lack of evidence that the site operations have contributed to any of the groundwater contamination, the Property owner is not likely liable for cleanup of the Superfund plume.

The following items of note were identified during this assessment:

- **Methane.** In general, significant methane concentrations were only reported in the eastern-central area of the Property and methane concentrations experienced a decreasing trend through the demolition activities of the asphalt cover and three-inch thick concrete layer as they were removed from the eastern-central area of the Property. Final readings collected in July of 2021 reported nonreportable levels of methane within the eastern-central area of the Property (Table 2). Based on the final results of combustible gas survey completed at the eastern-central area as of July 2021 along with the prior methane readings in the soil vapor probes in the remaining areas of the Property, no methane was detected at the Property. Since methane levels were not found above levels of concern (generally considered to be 0.5%, or 5,000 ppmV methane), methane is not a concern at the Property, and Stantec recommends no further assessment be conducted regarding methane.

The preceding summary is intended for informational purposes only. Reading of the full body of this report is recommended.

2.0 INTRODUCTION

The objective of this Phase I ESA was to perform All Appropriate Inquiry (AAI) into the past ownership and uses of the Property consistent with good commercial or customary practice as outlined by the ASTM in "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", Designation E1527-13. "All Appropriate Inquiry" (AAI) is the process for evaluating a property's environmental conditions for the purpose of qualifying for landowner liability protections under CERCLA. following final rule of Part 312 of Title 40, Code of Federal Regulations (40 CFR Part 312). The purpose of this Phase I ESA was to identify, to the extent feasible, adverse environmental conditions including recognized environmental conditions ("RECs") of the Property.

The ASTM E1527-13 standard indicates that the purpose of the Phase I ESA is to identify RECs, including historical recognized environmental conditions ("HRECs"), and controlled recognized environmental conditions ("CRECs") that may exist at a property. The term "recognized environmental conditions" means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property:

1. Due to any release to the environment;
2. Under conditions indicative of a release to the environment; or
3. Under conditions that pose a material threat of a future release to the environment.

ASTM defines a "HREC" as a REC that has occurred in connection with a property, but has been addressed to the satisfaction of the applicable regulatory authority and meets current unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a HREC, the environmental professional (EP) must determine whether the past release is a REC when the current Phase I ESA is conducted (e.g., if there has been a change in the regulations). If the EP considers the past release to be a REC at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a REC.

ASTM defines a "CREC" as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), but with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, activity and use limitations, institutional controls, or engineering controls).

As defined by ASTM, RECs can include hazardous substances or petroleum products present under conditions in compliance with laws if that presence represents a material threat of future release. The presence of hazardous substances or petroleum products is, however, not a REC if that presence is a *de minimis* condition. De minimis conditions are minor occurrences of contamination that generally do not present a material risk to human health and would not likely be subject to enforcement action if brought to the attention of governmental agencies.

The scope of work conducted during this Phase I ESA consisted of a visual reconnaissance of the Property, interviews with key individuals, and review of reasonably ascertainable documents. The scope of work did not include an assessment for environmental regulatory compliance of any facility ever operated at the Property (past or present), or sampling and analyzing of environmental media. Stantec was not contracted to perform an independent evaluation of the purchase or lease price of the Property and its relationship to current fair market value. The conclusions presented in this Phase I ESA report are professional opinions based on data described herein. The opinions are subject to the limitations described in Section 2.3.

ASTM E1527-13 notes that the availability of record information varies from source to source. The User or Environmental Professional is not obligated to identify, obtain, or review every possible source that might exist with respect to a property. Instead, ASTM identifies record information that is reasonably ascertainable from standard sources. “Reasonably ascertainable” means:

1. Information that is publicly available;
2. Information that is obtainable from its source within reasonable time and cost constraints; and
3. Information that is practicably reviewable.

2.1 PROPERTY DESCRIPTION

The Property consists of three parcels APN 8102-037-020, -022 and -024 identified as 2540 Rosemead Boulevard, in the city of South El Monte, county of Los Angeles, California. The Property is located to the east of Rosemead Boulevard and zoned for Recreational – Theater use. The Property is currently vacant and was formerly operated by the Starlite Swap Meet, a residence, and Master Designs Furniture. According to the Los Angeles County Assessor Map online database, the Property totals to approximately 17.37 acres. The Property is located in a suburban area characterized by industrial properties and residences. The terrain of the Property appeared to be generally sloping to the west. The terrain at the western portion of the Property is irregular as is characteristic of a drive-in theater. A Property location map is illustrated on Figure 1. A Property map illustrating the main features of the Property is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

2.2 SPECIAL TERMS, CONDITIONS, AND SIGNIFICANT ASSUMPTIONS

There were no special terms, conditions, or significant assumptions associated with this Phase I ESA.

2.3 EXCEPTIONS AND LIMITING CONDITIONS

This report documents work that was performed in accordance with generally accepted professional standards at the time and location in which the services were provided and given the schedule and budget constraints established by the client. No other representations, warranties, or guarantees are made concerning the accuracy or completeness of the data or conclusions contained within this report, including no assurance that this work has uncovered all potential and actual liabilities and conditions associated with the Property.

This report provides an evaluation of selected environmental conditions associated with the Property that was assessed at the time the work was conducted and is based on information obtained by and/or provided

to Stantec at that time. There are no assurances regarding the accuracy and completeness of this information. All information received from the client or third parties in the preparation of this report has been reviewed and evaluated by Stantec for its thoroughness and accuracy. Stantec assumes no responsibility for any deficiency or inaccuracy in information received from others.

Conclusions made within this report consist of Stantec's professional opinion as of the time of the writing of this report and are based solely on the scope of work described in the report, the limited data available, and the results of the work. They are not a certification of the property's environmental condition.

This report relates solely to the specific project for which Stantec was retained and the stated purpose for which this report was prepared and shall not be used or relied upon by client for any variation or extension of this project, any other project, or any other purpose.

This report has been prepared for the exclusive use of the client identified herein and any use of or reliance on this report by any third party is prohibited, except as may be consented to in writing by Stantec or as required by law. The provision of any such consent is at Stantec's sole and unfettered discretion and will only be authorized pursuant to the conditions of Stantec's standard form reliance letter. Stantec assumes no responsibility for losses, damages, liabilities, or claims, howsoever arising, from third party use of this report.

Project Specific limiting conditions are provided in Section 2.2.

The locations of any utilities, buildings and structures, and property boundaries illustrated in or described within this report, if any, including pole lines, conduits, water mains, sewers and other surface or sub-surface utilities and structures, are not guaranteed. Before starting site work, the exact location of all such utilities and structures must be confirmed by the client and the party performing the work, and Stantec assumes no liability resulting from damage to such utilities and structures.

The conclusions are based on the conditions encountered at the Property by Stantec at the time the work was conducted. Factors such as areas of potential concern identified in previous studies, site conditions (e.g., utilities), and cost may have constrained the testing and/or sampling locations used in this assessment. In addition, analysis has been carried out for only a limited number of chemical parameters, and it should not be inferred that other chemical species are not present. Due to the nature of the investigation and the limited data available, Stantec does not warrant against undiscovered environmental liabilities nor that the testing and/or sampling results are indicative of the condition of the entire Property.

As the purpose of this report is to identify Property conditions which may pose an environmental risk; the identification of non-environmental risks to structures or people on the Property is beyond the scope of this assessment.

The findings, observations, and conclusions expressed by Stantec in this report are not an opinion concerning the compliance of any past or present owner or operator of the Property which is the subject of this report with any Federal, state, provincial or local law or regulation.

This report presents professional opinions and findings of a scientific and technical nature. It does not and shall not be construed to offer a legal opinion or representations as to the requirements of, nor compliance

with, environmental laws, rules, regulations or policies of Federal, state, provincial or local governmental agencies. It is recommended that issues raised by the report should be reviewed for the client by its legal counsel.

Stantec specifically disclaims any responsibility to update the conclusions in this report if new or different information later becomes available or if the conditions or activities on the property subsequently change.

2.4 PERSONNEL QUALIFICATIONS

This Phase I ESA was conducted by, or under the supervision of, an individual that meets the ASTM definition of an Environmental Professional (EP). The credentials of the EP and other key Stantec personnel involved in conducting this Phase I ESA are provided in Appendix B.

3.0 USER-PROVIDED INFORMATION

ASTM E1527-13 describes responsibilities of the User to complete certain tasks in connection with the performance of "All Appropriate Inquiries" into the Property. The ASTM standard requires that the Environmental Professional request information from the User on the results of those tasks because that information can assist in the identification of RECs, CRECs, HRECs, or de minimis conditions in connection with the Property. Towards that end, Stantec requested that the User provide the following documents and information:

Description of Information	Provided (Yes / No)	Description and/or Key Findings
User Questionnaire and/or Interview	Yes	The User stated that previous environmental testing noted methane in the soil at the Property.
Environmental Liens or Activity Use Limitations	No	No environmental liens or activity use limitations were identified in the Preliminary Title Report provided by First American Title Company dated May 28, 2020. A copy of the preliminary title report is provided in Appendix C.
Previous Environmental Permits or Reports Provided by User	Yes	Previous reports associated with the Property are summarized in Section 4.4.6.
Purpose of the Phase I ESA	Yes	Due Diligence

Stantec forwarded the ASTM recommended User Questionnaire to Ms. Monica Tsai, Property Manager with California T.C. Group, L.P. The completed User Questionnaire returned to us by Mr. Mazler included in Appendix C.

1. Information on Environmental Cleanup Liens on Subject Property? **No**
2. Information on Subject Property Activity or Use Limitations (including Institutional and Engineering Controls)? **No**
3. Specialized knowledge or experience of the User: **No**
4. Relationship of the purchase price/rent to fair market value of the Subject Property if it were not contaminated? **Does not believe purchase price has been reduced from fair market value.**
5. Commonly known or reasonably ascertainable information about the Subject Property? **The Property past uses include a drive-in movie theater and swap meet.**
6. The degree of obviousness or the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation? **Previous environmental testing noted methane in the soil.**

The User provided information is included in Appendix C.

4.0 RECORDS REVIEW

The objective of consulting historical sources of information is to develop the history of the Property and surrounding area and evaluate if past uses may have resulted in RECs. Physical setting records are evaluated to determine if the physical setting may have contributed to adverse environmental conditions in connection with the Property. During the review of historical records, Stantec attempted to identify uses of the Property from the present to the first developed use of the Property. Stantec's research included the reasonably ascertainable and useful records described in this section.

4.1 PHYSICAL SETTING

A summary of the physical setting of the Property is provided in the table below with additional details in the following subsections

Topography:	The Property is at an average elevation of approximately 244 feet above mean sea level (msl) with a general topographic gradient to the west-southwest (EDR, 2021).
Soil/Bedrock Data:	According to a Limited Soil Investigation conducted by Stantec in November of 2020, the Property soil is characterized by layers of sandy, gravelly, and clayey deposits to 20 feet below ground surface (bgs) (Stantec, 2020).
Estimated Depth to Groundwater/ Estimated Direction of Gradient:	According to a 2017 remedial action report for a former Texaco station approximately 1700 feet to the northwest, groundwater in the vicinity of the Property is encountered at approximately 28-40 feet (bgs) with a flow to the southeast (Geotracker, 2021).
NOTE: Site-specific groundwater flow direction and depth can only be determined by conducting site-specific testing, which Stantec has not conducted.	

4.1.1 Property Topography and Surface Water Flow

The Property is at an average elevation of approximately 244 feet above mean sea level (msl) with a general topographic gradient to the west-southwest (EDR, 2020). Based on the topography, surface water on the Property infiltrates the ground surface in unpaved areas or flows over hardscaped surfaces toward the curb and gutter system along Chico Avenue.

The nearest surface body of water is the Rio Hondo River located approximately ½ mile to the west.

4.1.2 Regional and Property Geology

The Property is located in the San Gabriel Valley within the vicinity of the Whittier Narrows. Published geologic maps (USGS, 2005) show that surficial deposits within the vicinity of the Property consist of a late

Holocene, unconsolidated gravel, sand and silt in active or recently active streambeds. Deposits are primarily stream deposited, but also include some debris flow deposits.

According to a Limited Soil Investigation conducted by Stantec in November of 2020, the Property soil is characterized by layers of sandy, gravelly, and clayey deposits to 20 feet below ground surface (bgs) (Stantec, 2020).

The closest mapped fault is the East Montebello Fault located approximately 1.5 miles southwest of the Property (CGS, 2010). According to official maps of California, the Property is not located within an Alquist-Priolo (AP) Earthquake Fault Zone boundary, but it is located within a liquefaction zone (CGS, 2019).

4.1.3 Regional and Property Hydrogeology

The Property is located in the Montebello Forebay area in the Whittier Narrows, drainage from the San Gabriel Valley is primarily through the Whittier Narrows via the Rio Hondo and San Gabriel Rivers (CRA, 2011). The Property is located approximately 2.5 miles north of the Whittier Narrows Flood Control Basin and Dam.

Hydrogeologic information obtained from boring advancement at a nearby property shows that groundwater is encountered at approximately 24 and 38 feet bgs with a groundwater flow direction generally towards the southeast (CRA, 2011).

4.2 FEDERAL, STATE AND TRIBAL ENVIRONMENTAL RECORDS

A regulatory agency database search report was obtained from Environmental Data Resources, a third-party environmental database search firm. A complete copy of the database search report, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in Appendix D.

Stantec evaluated the information listed within the database relative to potential impact to the Property, assessing the potential for impacts based in part on the physical setting. As part of this process, inferences have been made regarding the likely groundwater flow direction at or near the Property. As described in 4.1.3, the inferred shallow groundwater flow direction is likely to be in the west. Observations about the Property and surrounding properties made during the Property reconnaissance are provided in more detail in Section 5.

4.2.1 Listings for Property

The Property was not identified in the EDR database report.

4.2.2 Listings for Nearby Sites with Potential to Impact Property

Stantec assessed data presented in the environmental agency database search report to evaluate the potential for conditions on adjacent and nearby sites to pose a REC, CREC, or HREC for the Property. The evaluation included an opinion of the potential for contamination by hazardous substances or petroleum

products to migrate to the Property from a nearby property, including by vapor migration or encroachment (i.e., potential for a vapor encroachment condition [VEC].

Based on this evaluation, the following individual facilities were identified as the most likely potential sources of impact to the Property. The basis for why each of the following listed databases creates a REC for the property is also provided.

Listed Facility Name/Address	**Database Listing**	**Distance/Direction from Property**	**REC? (YES / NO)**
Sam Gabriel Valley (Area 1) Peck Road & Real El Monte, CA 91733	CA AOCONCERN; NPL, SEMS, US ENG Control, ROD, PRP; CONSENT; FINDS; ECHO	Beneath Target Property	Yes
San Gabriel Valley (Area 1) is a regional groundwater plume but a listed location of Peck Road and Real (i.e. Calle Real). Environmental investigations have been ongoing since 1979 when VOCs in groundwater were first discovered. It is believed that there are several contributors of this regional contamination, and the EPA is still in the process of naming responsible parties. The San Gabriel Valley (Area 1) groundwater plume underlies the site and spans an area of 4 miles in length and 1.5 miles in width. The groundwater within the area of the site is reportedly contaminated with tetrachloroethylene (PCE), trichloroethylene (TCE), and carbon tetrachloride (CTC) from industrial activities involving degreasing, metal cleaning, or other solvent related activities. These solvents were likely to have been release from on-site disposal activities, poor housekeeping practices, piping leaks, or by other means. According to the EDR report, certain municipal wells within the plume reported PCE, TCE, and CTC concentrations so severe that those wells had to be put out of commission. Groundwater obtained from less severely contaminated wells is treated to ensure that the public receives water with PCE, TCE, and CTC concentrations below California Maximum Contaminant Levels (MCLs). The Property lies within Area 1 of the San Gabriel Valley Regional Groundwater Superfund plume. Given that groundwater in the vicinity of the Property is reported at approximately 50 feet below ground surface (bgs), the regional groundwater contamination plume is identified as a REC due to the potential for impact to soil vapor to present a health risk concern. Stantec recommends that soil vapor survey be performed at the Property to evaluate whether VOC concentrations in soil vapor are above health risk screening criteria for residential use. Stantec performed a limited subsurface investigation to evaluate this listing for potential impact to the Site. Details and findings from this investigation are provided in Section 6.0. The Property lies within Area 1 of the San Gabriel Valley Regional Groundwater Superfund plume. The groundwater in this area is contaminated with elevated levels of PCE, TCE, carbon tetrachloride (CT), and other VOCs from multiple point sources within the San Gabriel Valley. Due to groundwater in this area of the Property reported at approximately 50 feet bgs, Stantec initially identified this plume as a REC due to the potential for elevated soil vapor concentrations to exist beneath the site. That issue no longer appears to be a significant concern, given the low levels of detected VOC concentrations in soil vapor; however, Stantec does recommend soil vapor barriers, or a post grading soil vapor survey and health risk assessment be performed in connection with future development to validate this conclusion. In addition, the potential for cleanup liability also exists, but is mitigated due to the fact that the responsible parties have been identified and are addressing the contamination, as			

Listed Facility Name/Address	Database Listing	Distance/Direction from Property	REC? (YES / NO)
well as the lack of evidence that the site operations have contributed to any of the groundwater contamination. .			
Bright-Way Laundry 2622 Chico Avenue El Monte, CA 91733	HIST UST, HIST WIP, EDR US Historical Cleaners	Approximately 265 feet/ northeast	No
The EDR US Historical Cleaners database lists the former cleaners as being located at 2622 Chico Avenue in 1999 and the HIST UST database indicates that a UST containing "waste" was historically registered at the Property. There is no release reported in the EDR from the historical UST. The HIST WIP listing indicates that 2622 Chico Avenue was included in the basin wide assessment that was coordinated by the Regional Water Quality Control Board to name responsible parties for the groundwater San Gabriel Valley (Area 1) groundwater contamination plume. Further discussion regarding regional groundwater contamination is provided in Section 4.2.2. The fact that the Property is listed as a historical WIP site and because it is not listed in any of the databases that indicate a release (i.e. SLIC, LUST, ENVIROSTOR) the Property was not found to be a contributor to the regional groundwater contamination. Although the 2622 Chico Avenue address was not listed as a responsible party to the regional groundwater contamination, a release still could have occurred from the former cleaners that could represent an environmental concern if the land use were to change to residential. Therefore, the presence of the historical dry cleaner with a registered UST was considered a REC. Stantec recommended that a subsurface assessment be performed at the Property (2622 Chico Avenue) to evaluate potential impacts to soil and soil vapor from the former cleaners and UST. Due to groundwater in this area of the Site reported at approximately 50 feet bgs, Stantec initially identified this facility as a REC due to the potential for elevated soil vapor concentrations to exist beneath the Site. That issue no longer appears to be a concern, given the low levels of detected VOC concentrations in soil vapor during previous subsurface investigations performed at the Property, therefore no longer identified as a REC to the Site. Details and findings from this investigation are provided in Section 6.0.			
Eldon Drapery Cleaners 2461 Chico Avenue El Monte, CA 91733	DRYCLEANERS; WIP; HWTS; EDR Hist Cleaner	Approximately 100 feet/ southeast	No
This facility is located within 100 feet south of the Property boundary (Parcels 9 and 10 - 2540 Rosemead Blvd). No releases have been reported for this facility. However, the presence of this dry cleaner was considered a REC due to the potential for unknown releases to have occurred that would present a potential vapor migration issue at the Property. Stantec recommended that soil vapor samples be collected along the Property line adjacent to this facility to evaluate whether VOC concentrations in soil vapor are above health risk screening criteria for residential use. Due to groundwater in this area of the Site reported at approximately 50 feet bgs, Stantec initially identified this facility as a REC due to the potential for elevated soil vapor concentrations to exist beneath the Site. That issue no longer appears to be a concern, given the low levels of detected VOC			

Listed Facility Name/Address	Database Listing	Distance/Direction from Property	REC? (YES / NO)
concentrations in soil vapor during previous subsurface investigations performed at the Property, therefore no longer identified as a REC to the Site. Details and findings from this investigation are provided in Section 6.0.			
Champ Corp. 2500 Rosemead Blvd El Monte, CA 91733	LUST; Cortese; HIST CORTESE; CERS	Approximately 315 feet/ west-southwest	No
This facility is listed in the LUST and HIST CORTESE databases. The LUST database indicates that a release of gasoline to soil occurred at this facility. No information regarding remedial activities are provided in the EDR report. However, the Regional Water Quality Control Board (RWQCB) issued closure for this release on June 18, 1996. Although the impact appears to be to the soil only, no soil vapor data or samples have been collected along the Property boundary. Therefore, this facility is considered a REC. Stantec recommends that soil vapor samples be collected along the Property line adjacent to this facility to evaluate whether VOC concentrations in soil vapor are above health risk screening criteria for residential use. Due to groundwater in this area of the Site reported at approximately 50 feet bgs, Stantec initially identified this facility as a REC due to the potential for elevated soil vapor concentrations to exist beneath the Site. That issue no longer appears to be a concern, given the low levels of detected VOC concentrations in soil vapor during previous subsurface investigations performed at the Property. Details and findings from this investigation are provided in Section 6.0.			
General Enameling Co / 2463 Chico Ave; American General Bus /2430 Chico Avenue; Raypack, Inc / 2416 Chico Avenue; Monterey Caskett Co / 2404 Chico Ave; M&T / 2500 Rosemead Blvd; Hooter Bros Enamelin / 2460 Rosemead Blvd; Silver Streak Traile / 2319 Chico Ave; Hyde Engineering / 2428 Rosemead Blvd	SLIC, WIP	< 1/8 mile southeast and southwest of the Property	No
The above facilities are all located within 1/8 of a mile from the southern Property boundary (Parcels 9 and 10 – 2540 Rosemead Blvd). Each of the eight facilities listed have reported a release of chlorinated solvents that affected groundwater below their respective properties. Of the eight listings, four have received case closure from the RWQCB. Two of the listed SLIC facilities M&T and Hooter Bros Enamelin are located adjacent to the southwest of the Property. The remaining SLIC facilities are located further to the southwest and southeast but are at a density such that combined effects of these releases could present a vapor migration potential. As a result, the SLIC facilities located within 1/8 of a mile are considered an REC. Stantec recommends that the soil vapor survey previously recommended to evaluate impacts from regional groundwater contamination also include assessment of soil vapor impacts in the southwest and southeast portions of Parcels 9 and 10 (2540 Rosemead Blvd).			

<table>
<tr><th>Listed Facility Name/Address</th><th>Database Listing</th><th>Distance/Direction from Property</th><th>REC? (YES / NO)</th></tr>
<tr><td colspan="4">Due to groundwater in this area of the Site reported at approximately 50 feet bgs, Stantec initially identified this facility as a REC due to the potential for elevated soil vapor concentrations to exist beneath the Site. That issue no longer appears to be a concern, given the low levels of detected VOC concentrations in soil vapor during previous subsurface investigations performed at the Property, therefore no longer identified as a REC to the Site. Details and findings from this investigation are provided in Section 6.0.</td></tr>
<tr><td>Vansco
2652 Lashbrook Avenue
El Monte, CA 91733</td><td>SLIPC, WIP</td><td>Approximately 450 feet/ northwest</td><td>No</td></tr>
<tr><td colspan="4">This facility is listed in the EDR report under the SLIC and WIP databases for a release that affected the aquifer used for drinking water. Under the SLIC database the facility status is listed as “Open – Inactive” as of October 29, 2014. This facility is the sole up-gradient release site within 1/8 of a mile from the Property and is approximately 450 feet northwest of the Property. Due to distance from the Property, this facility is considered unlikely to represent an environmental concern and no further assessment is recommended.</td></tr>
<tr><td>Various properties</td><td>WIP</td><td><1/8 mile</td><td>No</td></tr>
<tr><td colspan="4">As mentioned in Section 4.2.1, the Property and surrounding area lies within Area 1 of the San Gabriel Valley Regional Groundwater Superfund plume. The groundwater in this area is contaminated with elevated levels of PCE, TCE, CT, and other VOCs from multiple point sources within the San Gabriel Valley. In order to seek out and name responsible parties for the groundwater contamination, the RWQCB created and oversaw the WIP program that included a basin wide assessment of groundwater at various industrial properties based on past industrial uses. Inclusion in the WIP database on its own does not constitute an REC. The WIP is simply a listing of sites were groundwater assessment occurred under RWQCB oversight.</td></tr>
<tr><td>Coast Michinery Move / 2431 Chico Ave; Coit Drapery Cleaner / 2411 Chico Ave; Sunset Ladder Co / 2526 Rosemead Blvd; M&T / 2500 Rosemead Blvd</td><td>HIST UST, SWEEPS UST</td><td>< 1/8 mile from the Property</td><td>No</td></tr>
<tr><td colspan="4">The above facilities are all located within 1/8 of a mile from the Property boundary. Each of the four facilities listed have had, or still have, registered USTs. Of the four listings, only M&T is reported to have had a release. Recommendations related to M&T were discussed previously. There are no reported releases associated with the remaining listings within 1/8 of a mile. As a result, no further investigation is recommended.</td></tr>
</table>

The remaining listings in the database search report provided in Appendix D do not constitute a potential REC for the Property.

4.3 LOCAL/REGIONAL ENVIRONMENTAL RECORDS

Stantec checked the following sources to obtain information pertaining to Property use and/or indications of RECs in connection with the Property:

4.3.1 Los Angeles County Fire Department

Agency Name Contact Information	Finding
Los Angeles County Fire Department 1320 N. Eastern Ave Los Angeles, CA 90063 (323) 881-2411 info@fire.lacounty.gov	According to an email dated July 28, 2021, from the Los Angeles County Fire Department, there are no records for the Property address via records request H039647-072821. Additionally, there are no records listed in the LACFD Site Mitigation, CALARP, or CUPA Facility Active and Inactive databases.

4.3.2 Los Angeles County Department of Public Works

Agency Name Contact Information	Finding
Los Angeles County Department of Public Works (DPW) Environmental Programs Division UST Program 900 South Fremont Avenue, 3rd Floor Alhambra, California Tel: (626) 458-3517 https://dpw.lacounty.gov/epd/swims/ Online Services/search-methane-hazards-esri.aspx	Stantec researched the Solid Waste Management System database managed by this agency to determine if methane mitigation is required for the Property. According to this database, the Property is not within 300 feet of an oil or gas well. According to an email dated July 28, 2021, from Mr. Phillip Gharibians, LADPW Program Manager, there are no records for the Property.

4.3.3 City of South El Monte

Agency Name, Contact Information	Findings
City of South El Monte 1415 Santa Anita Avenue South El Monte, CA 91733	The City of South El Monte provided building permit applications and occupancy permit applications. No records of environmental significance were observed. A copy of the records provided in included in Appendix F.

4.3.4 Department of Toxic Substances Control (DTSC)

Agency Name, Contact Information	Findings
Department of Toxic Substance Control 5796 Corporate Avenue Cypress, California 90630 Online Database: https://www.envirostor.dtsc.ca.gov/public/	On July 28, 2021, Stantec searched for available records provided by the California DTSCs online database Envirostor. According to the database, there are no records found for the Subject Property.

4.3.5 Regional Water Quality Control Board

Agency Name, Contact Information	Findings
Regional Water Quality Control Board (RWQCB) – Los Angeles Region 320 West 4th Street, Suite 200 Los Angeles, CA 90013 Accessed July 9, 2020 Online database: https://geotracker.waterboards.ca.gov/	On July 28, 2021, Stantec searched for available records provided by the RWQCB's online database Geotracker. According to the database, there are no records found for the Subject Property. According to an email dated August 5, 2021, from Younga Choi, Associate Governmental Program Analyst, there are no records for the Property.

4.3.6 California Geologic Energy Management Division (CalGEM)

Agency Name, Contact Information	Findings
California Geologic Energy Management Division (CalGEM) Online database: https://www.conservation.ca.gov/calgem	Stantec searched for oil wells on the California Geologic Energy Management Division (CalGEM) online database. Two dry holes are located within a 0.61-mile radius of the Property. One plugged dry hole (API 0403720665) is located approximately 0.68 miles southwest of the Property operated by Harry J. Riskas and a second plugged dry hole (API 0403705790) is located approximately 0.6-miles northwest of the Property operated by Rancho Oil Corp., LTD. Due to the distance and plugged status of the wells, Stantec recommends no further action.

4.4 HISTORICAL RECORDS REVIEW

4.4.1 Land Title Records/Deeds

The Preliminary Title Report provided by First American Title Company dated May 28, 2020, identified the following easements related to the Property:

- An easement for pipelines for the transportation of gas and incidental purposes recorded October 28, 1948, for Southern California Gas Company.
- An easement for pipelines for the transportation of gas and incidental purposes recorded April 6, 1949, for Southern California Gas Company.
- An easement for covered storm drains and appurtenant structures and incidental purposes recorded January 23, 1975 for Los Angeles County Flood Control District.
- An easement for covered storm drains and appurtenant structures and incidental purposes recorded March 21, 1975 for Los Angeles County Flood Control District.

The Preliminary Title Report also identified a deed of trust to secure an original indebtedness of $6,000,000.00 recorded August 4, 1989.

No other land title records were reviewed by Stantec as part of this assessment.

4.4.2 Aerial Photographs

Stantec reviewed historical aerial photographs provided by EDR. The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone. The following table summarizes Stantec's observations of the reviewed historical aerial photographs.

Year	Scale	Observations, Property and Adjoining Properties
1928	1:500	The Property is observed as agricultural land with a small structure in the northeast corner of the Property. A road appears adjacent to the east. Surrounding properties appear utilized as agricultural lots as well with
1938	1:500	The Property appears to be utilized for agricultural purposes. Development appears in the southeast corner of the Property. The land adjacent to the north, west, and south appear to be developed for agriculture. Residential development appears west of the Property.
1948	1:500	The Property and land immediately adjacent to the south and northwest appear similar to the previous photograph. The regional area is now mostly developed with residential and commercial structures.
1952, 1964 1977, 1979 1983, 1989 1994, 2002	1:500	The Property appears developed as a drive-in movie theater. Some of the aerial photographs show the movie theater portion of the Property filled with vehicles. A parking lot appears to be developed in the western portion of the Property. The surrounding area is densely developed with residential and commercial structures.
2005, 2009 2012, 2016	1:500	The Property is repurposed from a drive-in theater to a neighborhood swap meet. Multiple vendor canopies are observed throughout the eastern portion of the Property and the entrance visible in the western portion.

Name of aerial photograph source: EDR, 2020

4.4.3 City Directories

Stantec retained a third party to research available reverse city directories for the Property, in approximately five-year intervals.

The following is a summary of Stantec's review of the city directory listings:

Subject/Adjoining Property	Year	Listed Occupants
2540 Rosemead Blvd. Subject Property	1994-2014	Starlite Swap Meet and Starlite Drive In
	2004-2014	Rosemead Drive in
	1976	Brush Div Gould Inc Brush Instruments Division Gould Inc Gould Inch Brush Div Instrument Systems Div Gould Inc
	1980	Chadwich-Helmuth co Inc Arden Dr El Monte
	1985	Chadwich-Helmuth Co Inc Crehan Construction El Monte
	1999	Chadwickhelmuth Co Inc
	2016	Chadwick Helmuijh Co Inc
	2010	All Nations Flower Supplies Floor US
	2014	All Nations Flower Supplies Floor US
2559 Chico Ave. Subject Property	2009	Starlite Swapmeet
	2006	CHUShihjen ORTIZFillberto
	1995	Chu Shih Jen
	1980-1985	Bratcher Ford
9321 Fern St Adjoining Property	2014	A Temp Refrigeration Inc
	1985-2006	Roberts Jilton
9327 Fern St Adjoining Property	2014	Griselda Marquez
	1999-2009	Manuel Lopez
	1999	X Troy Av
9328 Fern St Adjoining Property	2014	Com Century Resources LLC
	1957	Rose Richard E
9329 Fern St Adjoining Property	2006-2014	Blancos Welding Service
	1994-1999	Colonial Artistic Iron Work
	1957-1975	Accurate Machine Products

Subject/Adjoining Property	Year	Listed Occupants
	1966	Kestler Electronics
	1957	Ventura Regulator Co

Additional City Directory information for surrounding properties is provided in Appendix E.

Name of city directories and source: EDR, 2020

4.4.4 Historical Fire Insurance Maps

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide information on the history of prior land use and are useful in assessing whether there may be potential environmental contamination on or near the Property. These maps, which have been periodically updated since the late 19th century, often provide valuable insight into historical Property uses.

Stantec requested fire insurance maps from Environmental Data Resources; however, no coverage exists for the Property. The Sanborn® Map Search Report indicating “no coverage” is presented in Appendix E.

4.4.5 Historical Topographic Maps

Stantec reviewed historical USGS 7.5-minute Topographic Maps of the El Monte, Pasadena, Los Angeles, California Quadrangles (scale 1:24,000; 1:62,500) to help identify past Property usage and areas of potential environmental concern.

No RECs were noted during our review of the topographic maps. Copies of the historical maps are provided in Appendix E. The following table summarizes the maps reviewed and our observations.

Year	Scale	Observations, Property and Adjoining Properties
1894 1896 1900	1:62,500	The Property is observed to be vacant along with the surrounding areas. The Lexington Wash, currently named “Rio Hondo River”, is observed to the north of the Property. A railroad line is apparent to the northeast of the Property.
1923 1926	1:24,000	The Property remains undeveloped. Chico Avenue is seen running through the eastern portion of the Property. Development in the surrounding area appears to the northeast and northwest.
1948	1:24,000	The surrounding areas are now densely populated with a mixture of residential and commercial buildings throughout. The subject Property remains undeveloped. The Potrero School is seen north of the Property
1953 1966 1972 1981 1991	1:24,000	The Property is now labeled as a drive-in theater. The El Monte City Boundary is demarcated to the northwest of the Property. Rosemead Boulevard is adjacent to west of the Property.

Year	Scale	Observations, Property and Adjoining Properties
1994		
2012	1:24,000	No site details are depicted. Roadways appear in their current configuration.

Name of maps and source: EDR, 2020

4.4.6 Other Historical Sources

The user provided the following previous reports for the Property:

Phase I Environmental Site Assessment for 2540 Rosemead Boulevard, 2559, 2603, 2610, 2622, 2630, & 2634 Chico Avenue, 2607, 2629, & 2637 Humbert Avenue, South El Monte, CA 91733, Prepared for Warmington Residential CA, prepared by Hillmann Consulting, dated August 6, 2015

Hillman Consulting (Hillmann) prepared a Phase I ESA for the 17.37 acres of land located between Rosemead Boulevard and Chico Avenue identified by the following parcel numbers: 8102-037-020, 8102-037-021, 8102-037-001, 8102-035-017, 8102-029-025, 8102-029-007, 8102-029-006, 8102-029-005, 8102-029-026, 8102-029-019, and 8102-029-020 (subject Property). Historical review of the Property revealed a dry cleaner located 2622 Chico Avenue as well as a regional groundwater and soil gas contamination associated with the San Gabriel Valley Superfund site. During the site reconnaissance of the Property, poor housekeeping was observed within the former maintenance shop structure located in the southeastern portion of the Property. Hillmann identified the above concerns as RECs to the Property. Hillman recommended that a Phase II ESA be completed on the Property to access these RECs.

Supplemental Phase II Subsurface Investigation Report for 2540 Rosemead Boulevard; 2559 & 2603 Chico Street South El Monte, California, Prepared for Warmington Residential CA, prepared by Hillmann Consulting, dated October 5, 2015

To investigate the RECs identified in the Phase I ESA, Hillman conducted a Supplemental Phase II subsurface investigation of the Property. In August of 2015, Hillman advanced 16 soil vapor samples across the site. Results of soil and soil gas sampling indicated one soil sample (B16-2) had moderate levels of oil-range petroleum hydrocarbons (354 mg/kg) that exceeded conservative screening levels for residential settings in California. In addition, methane was detected in one sample that approached the 12,500 ppmV threshold for the maximum mitigation risk as indicated in LADBS guidance. The presence of shallow petroleum hydrocarbon soil contamination and high methane levels along with very low oxygen and high carbon dioxide levels suggest a possible substantial hydrocarbon source in the vicinity of probes SG15 and SG16.

Based on these results, Hillmann completed the second phase of investigation targeted around SG15 and SG16 in September of 2015. Ten additional soil borings were installed, and 28 soil samples were tested for total petroleum hydrocarbons. Results indicated no soil samples analyzed reported significant levels of petroleum hydrocarbon contamination (maximum of 35 mg/kg oil range hydrocarbons and 32 mg/kg diesel range hydrocarbons). However, three of the six additional soil gas probes had high levels of methane. Each exceeded the LADBS Level 5 standard, and the maximum concentration was 620,000 ppmV methane.

Hillman concluded that the source of methane contamination is likely degradation of petroleum hydrocarbon compounds detected in several of the soil samples. However, the high methane levels detected in soil gas did not seem to correlate well with the level of petroleum detected in the soil. Hillman recommended that petroleum hydrocarbon impacted soil should be excavated and removed to eliminate this as a possible source of further methane.

Trench Testing Report, Former Drive-In Theater, 2540 Rosemead Boulevard, Prepared for Warmington Residential CA, Prepared by Hillmann Consulting, dated November 19, 2015

In response to the high methane concentrations, Hillmann installed a trench between probes SG19 and SG20 which measured approximately 12 feet long, 3 feet wide, and 20 feet deep. Hillmann observed the excavation activities and monitored the work area for explosive levels of methane using a Multi-Rae gas detector. The open excavation was also monitored directly for methane and no significant levels were detected. This suggested to Hillmann the off gassing of methane was relatively quick.

On November 10, 2015, existing probes SG6, SG9, and SG11 were sampled and tested for methane and reported a maximum of 28.2 ppmV methane. On November 12, 2015, the trench was backfilled with the original cuttings and soil gas probes were installed between approximately 17 and 18 feet bgs and 7.5 feet bgs in the backfill. Approximately 2 hours after backfilling, each soil gas probe was monitored for pressure and purged. Fixed gases were monitored during the purging process. When methane levels stabilized soil gas samples were collected in a Tedlar bag and submitted for laboratory analysis. Additional soil vapor samples were collected on November 13, 2015.

Analytical results indicate that vapor samples collected two hours after backfilling the trench had 37,000 and 14,5000 ppmV methane and soil gas samples collected 24-hours after backfilling the trench had 66,500 and 28,000 ppmV.

Based on the results Hillmann stated that vapor barriers and a passive or active methane collection and mitigation system beneath each structure will likely be required in the eastern project area and even possibly in portions to the west of the area of impact. Hillmann recommended installation additional shallow and deep vapor probes to further define the zone of impact and provide reasonable delineation of the extent of methane impact. Hillmann also recommended installing a dual-completion vapor extraction well in the area of highest methane concentrations.

Phase II Subsurface Investigation of 2540 Rosemead Boulevard and 2559 & 2603 Chico Street, prepared for David Tsay, Prepared by Fulcrum Resources Environmental, dated July 20, 2018

On June 13, 2018, Fulcrum Resources Environmental (FRE) contracted Munoz Drilling, Inc. of Santa Ana, California to advance soil borings at the subject property to assess possible contaminants in soil and soil vapor. The purpose of this investigation was to further evaluate the presence of methane previously identified at the subject Property by Hillmann. FRE reported concentrations of methane ranging from less than 10 ppmv to a peak level of 235,000 ppmv in boring SB31-10 in the eastern portion of the Property. The highest concentrations of methane were detected in the ten-foot soil vapor samples form borings SB31 (235,000 ppmv), SB33 (162,000 ppmv), and SB34 (109,000 ppmv). The elevated methane appeared to be in close proximity to a gas pipeline leading to the snack shop from the maintenance building. It was suspected by FRE that a leaking pipeline was the potential source of the elevated methane at the southeastern portion of the Property.

Following the June 2018 investigation, the SoCal Gas Company closed and locked out the gas pipeline valve located at the maintenance building, terminating gas service to the snack shop. The location of the maintenance building, snack shop, and gas pipeline are presented in Figure 2.

Pre-Demolition Asbestos and Lead-Based Paint Survey, Prepared by Stantec Consulting, dated August 26, 2020

During the time of the Asbestos and Lead-Based Paint Survey conducted in August of 2020, the Property was occupied by the Starlite Swap Meet which includes a dining/restroom building, former ice cream building, covered seating areas, and maintenance building. The buildings were surrounded by an asphalt parking lot formerly used for a drive-in movie theater. Asbestos containing materials were identified and abatement by a licensed contractor was recommended prior to demolition of the structures.

Phase I Environmental Site Assessment and Limited Subsurface Assessment South El Monte Swap-Meet 2540 Rosemead Boulevard El Monte, California 91733, Prepared by Stantec Consulting, dated November 12, 2020

Stantec completed a Phase I ESA and limited subsurface assessment between July 16 and 24, 2020 to assess possible contaminants associated with the RECs identified in the previous Property assessment reports referenced above. Soil borings, soil vapor probe, and test pit locations are shown on Figure 3. Stantec installed eleven multi-depth soil vapor sampling probes in borings locations SV-1 through SV-11 during this assessment as reported below.

Methane

Upon confirmation that the SoCal Gas Company service line was still closed and locked-out since 2018, Stantec installed soil vapor probes at six locations (SV-6 through SV-11) near the gas pipeline with soil vapor probes placed at 5 feet, 10 feet, and 20 feet below bgs on July 16, 2020.

The methane concentrations in the soil vapor probes located near the gas pipeline were measured 2 hours after installation, and then approximately one week later, and ranged between 7,000 ppmv (0.7% by volume) and 66,000 ppmv (6.6 % by volume), with the highest concentration reported in soil vapor probe SV-6 at a depth of 5 feet bgs. The reported concentration did show a decrease in concentration since detection occurred by Hillmann in 2015 and FRE in 2018. However, the concentration detected by Stantec still represented a concern to site development for residential purposes.

To evaluate potential options to reduce the methane concentrations in the subsurface, Stantec conducted a limited pilot test involving excavation of the methane impacted soils. This pilot study was conducted on September 17 and 18, 2020. Stantec provided oversight and air monitoring during the excavation of a 25-foot-wide, 40 feet long and 15 feet deep area to evaluate methane concentration reductions in the soil after excavation. The remedial excavation was located southwest of the natural gas pipeline in the area with the highest methane concentrations reported in the Stantec July 2020 site assessment. The existing soil vapor probes SV-6 through SV-10 were utilized to monitor methane concentrations within the surrounding undisturbed soil during and after the remedial excavation.

Stantec monitored the methane concentrations in the soil vapor probes surrounding the excavation during and after the remedial activities. The vapor probes detected a reduction in methane concentrations in the surrounding soil, but still at elevated levels.

During the excavation process, a three-inch-thick concrete layer was encountered approximately two to three feet bgs across the entire excavation area. Below the concrete layer, Stantec encountered soil consisting of several thin dark silt and clay layers interbedded within the grayish green sand throughout the maximum depth of the excavation of about 15 feet bgs. The excavated soil was field screened, during the excavation and stockpile process, for methane and volatile organic compounds (VOCs) in accordance with SCAQMD Rule 1166, using a GEM 2000 Plus and photoionization detector (PID), respectively. Soil monitoring performed during the excavation reported no measurable concentrations of methane in any of the field readings (i.e. 0.0 % by volume) and VOCs at less than 0.2 ppmv, well below the SCAQMD Rule 1166 permit requirements of 50 ppmv.

All excavated soil was placed on the existing asphalt parking lot near the excavation area. The stockpile was periodically moistened to suppress dust. The final stockpile measured approximately 40 feet wide, 80 feet long and 6 feet high. Upon completion of the remedial excavation, four soil vapor test probes (TR-1 through TP-4) were installed four feet into the stockpile to monitor methane concentrations in the excavated material. Approximately two weeks after the completion of the remedial excavation, no methane (0%) was reported in the four soil vapor test probes installed within the stockpile. The results of the pilot test reported that the excavation process did appear to mitigate the methane detected in the subsurface

The concentrations of methane in the soil vapor probes (SV-6 through) located in the surrounding undisturbed soil adjacent to the test excavation were reported at 19,000 ppmv to 48,000 ppmv at the end of this limited remedial excavation. Based on the non-detectable methane concentrations (0.0%) in the western, southeast, and northeast corner of the site, the area with elevated methane in the soil appeared to be limited to the eastern-central area of the Property, centrally located between the snack bar, maintenance building, and northeast corner of the Property (Figure 3).

Adjacent Dry Cleaners and Groundwater Plume

Minor concentrations of VOCs in soil vapor were reported in July 2020, including methylene chloride; carbon disulfide; toluene; xylenes; 4-ethyltoluene; 1,3,5- Trimethylbenzene (TMB); 1,2,4-TMB; and 1,1,1-Trichloroethane (TCA) detected throughout the Property at concentrations below regulatory screening levels for residential uses.

Shallow soil vapor samples collected from the 5-feet interval showed detections of benzene at 16 and 18 micrograms per cubic meter (ug/m3) in soil vapor samples SV-3-5 and SV-6-5, respectively. Trichloroethene (TCE) and ethylbenzene were detected at 52 and 110 ug/m3 in soil vapor sample SV-3-5, respectively. Tetrachloroethene (PCE) was detected at 22 and 69 ug/m3 in soil vapor samples SV-1-5 and SV-3-5. The detected concentrations were above the RSL using an attenuation factor of 0.03, which is currently applied by the appropriate regulatory agency for vapor intrusion (VI) screening purposes. However, these concentrations are below the Residential Screening Level (RSL) for Soil Vapor using Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) Note 3 with an attenuation factor of 0.001 used by DTSC to evaluate risk.

Trenching and Test Pits

In July 2020, during the same time as Stantec's initial methane assessment described above, trenching and test pits activities were performed in the eastern-central area of the Property, centrally located between the snack bar, maintenance building, and northeast corner of the Property where the natural gas line was reported, and areas of visibly stained soil were report by the prior site assessments. Stantec trenched alongside the gas line to evaluate the extent of impact soil in these areas and evaluate the potential natural gas leak suspected by Hillmann. Field screening was performed during the trenching activities and twenty (20) soil samples were collected at various test pit locations and depths. These soil samples were analyzed for total petroleum hydrocarbons (TPH) by EPA Test Method 8015B. The ten (10) soil samples with the highest TPH results or field screening reading were analyzed for VOCs.

No detections of TPH as gasoline range organics (GRO) or volatile organic compounds (VOCs) were detected above the laboratory reporting limits in any of the soil samples (*i.e.* all samples were "non-detect") submitted for laboratory analysis, with the exception of one minor detection of naphthalene at 0.0093 mg/kg in Test Pit Row #3 soil sample TPT-3-200'. The detection of naphthalene is below the residential environmental screening level (ESL) of 0.042 mg/kg.

TPH as diesel range organics (DRO) and TPH as oil range organics (ORO) were detected in Test Pit Row #2 at 120 and 570 mg/kg respectively in soil sample TPT-3-0' and at 570 and 2,400 mg/kg in soil sample TPT-3-200'. The TPH-DRO and TPH-ORO concentrations from TPT-3-200' are above the ESL for residential land use of 260 and 1,600 mg/kg.

Upon completion of the soil analysis and testing, the soil was pushed back into the trenches and test pits and wheel-rolled for compaction. Soil removal for this *de minimus* area near TPT-3-200' and proper re-compaction of these trenches and test pit will be conducted during the development grading.

Historical Agricultural Use

Stantec collected three composite soil samples (Comp-1, Comp-2, and Comp-3) from the 0.5-foot interval and the 3-feet interval on July 15, 2021. The shallow soil samples were analyzed for organochlorine pesticides (OCPs) by EPA Test Method 8081A and arsenic and lead by EPA Test Method 6010B.

OCPs (4,4'-DDE, alpha-Chlordane, Chlordane, and dieldrin) were detected at minor concentrations that are below their respective DTSC HERO Note 3 screening level and EPA RSL for residential land use. Additionally, the cumulative concentrations are below the California Hazardous Waste Level for these compounds. These soil results are summarized on Table 6.

All detected metals concentrations were within typical naturally occurring California background concentration ranges, and do not exceed DTSC HERO Note 3 or EPA RSLs for residential use. Arsenic was detected at concentrations ranging from 4.8 to 9.8 mg/kg, which are within the Southern California regional background range of 0.6 to 11 mg/kg. Lead was detected at concentrations ranging from 4.9 to 35 mg/kg which are below the DTSC HERO Note 3 screening level of 80 mg/kg. Based on the composite

soil samples results, historical agricultural use does not represent an environmental concern and no further investigation appears warranted related to these issues.

Despite the trial remedial excavation conducted by Stantec along with the trenching and backfill activities performed by Hillman in 2015, methane conditions at the Property were still considered a REC. Therefore, Stantec performed an additional methane assessment in 2021 which is discussed in Section 6.0.

5.0 SITE RECONNAISSANCE

A visit to the Property and its vicinity was conducted by Ms. Debbie Hernandez, Geologic Staff with Stantec, on September 23, 2021. Stantec was unaccompanied during the Property visit. Figure 2 provides information about the Property and adjoining properties and the location of potential areas of environmental concern. Photographs collected during the Property visit are included in Appendix A.

5.1 SITE RECONNAISSANCE METHODOLOGY

The site reconnaissance focused on observation of current conditions and observable indications of past uses and conditions of the Property that may indicate the presence of RECs. The reconnaissance of the Property was conducted on foot and Stantec utilized the following methodology to observe the Property:

- Traverse the outer Property boundary.
- Traverse transects across the Property.

Weather conditions during the visit to the Property were clear and sunny. There were no weather-related Property access restrictions encountered during the reconnaissance visit.

5.2 GENERAL DESCRIPTION

Property and Area Description:	The parcels are located between Rosemead Boulevard and Chico Avenue. The Property is currently undeveloped land.
Property Operations.	The Property is currently vacant.
Structures, Roads, Other Improvements:	The western portion of the Property is partially covered by asphalt. The eastern portion of the Property is exposed soil due to recent demolition of former structures and asphalt.
Property Size (acres):	Approximately 17.37 acres.
Estimated % of Property Covered by Buildings and/or Pavement:	20%
Observed Current Property Use/Operations:	Vacant land
Observed Evidence of Past Property Use(s):	Former drive-in theater, Starlite Swap Meet, a residence, and Master Designs Furniture
Sewage Disposal Method (and age):	City of El Monte.
Potable Water Source:	City of El Monte.
Electric Utility:	Southern California Edison.

5.3 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

The following table summarizes Stantec's observations during the Property reconnaissance.

Observations	Description/Location
Hazardous Substances and Petroleum Products as Defined by CERCLA 42 U.S.C. § 9601(14):	None observed.
Drums (≥ 5 gallons):	None observed.
Strong, Pungent, or Noxious Odors:	None observed.
Pools of Liquid:	None observed.
Unidentified Substance Containers:	None observed.
PCB-Containing Equipment:	None observed.
Other Observed Evidence of Hazardous Substances or Petroleum Products:	None observed.

5.4 INTERIOR OBSERVATIONS

Given there are no structures on the Property, this section of the report is not applicable.

5.5 EXTERIOR OBSERVATIONS

Stantec made the following observations during the site reconnaissance of exterior areas of the Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
On-site Pits, Ponds, or Lagoons:	None observed.
Stained Soil or Pavement:	None observed.
Stressed Vegetation:	None observed.
Waste Streams and Waste Collection Areas:	None observed.
Solid Waste Disposal:	A dumpster was observed in the southeast corner of the Property storing miscellaneous metal debris.
Potential Areas of Fill Placement:	None observed.
Wastewater:	No exterior wastewater discharge was observed.
Stormwater:	Stormwater infiltrates the exposed ground surface.
Wells:	None observed.
Septic Systems:	No visible evidence of a septic system was observed.
Other Exterior Observations:	None observed.

Site Reconnaissance
October 12, 2021

5.6 UNDERGROUND STORAGE TANKS/STRUCTURES

Existing USTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface patches), which would indicate the presence of USTs, was discovered during the site reconnaissance.
Former USTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface patches), reports, or other evidence of the former presence of USTs was discovered during this Phase I ESA.
Other Underground Structures:	A gas meter was observed in the southeast corner of the Property. The gas company and private utility locator mapped the gas line as it traveled from Chico Avenue to the gas line, and then continued northwest towards the maintenance building and beyond to the convenience store.

5.7 ABOVEGROUND STORAGE TANKS

Existing ASTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface stains), which would indicate the presence of ASTs, was discovered during the site reconnaissance.
Former ASTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface stains), reports, or other evidence of the former presence of ASTs was discovered during this Phase I ESA.

5.8 ADJOINING PROPERTIES

5.8.1 Current Uses of Adjoining Properties

As viewed from the Property and/or from public rights-of-way, Stantec made the following observations about use and activities on adjoining properties:

NORTH	Residential units and a pet supply company.
EAST	Multiple industrial warehouses.
SOUTH	Multiple industrial warehouses.
WEST	Multiple industrial warehouses.

5.8.2 Observed Evidence of Past Uses of Adjoining Properties

Observations of adjoining properties providing indications of past use and activities, if any, are described below.

NORTH	None observed.
EAST	None observed.
SOUTH	None observed.
WEST	None observed.

5.8.3 Pits, Ponds or Lagoons on Adjoining Properties

As viewed from the Property and/or from public rights-of-way, Stantec made the following observations about the presence of pits, ponds and lagoons on adjoining properties:

NORTH	None observed.
EAST	None observed.
SOUTH	None observed.
WEST	None observed.

5.9 OBSERVED PHYSICAL SETTING

Topography of the Property and Surrounding Area:	The Property is at an elevation of approximately 244 feet above msl with a general topographic gradient to the west-southwest (EDR, 2021).

6.0 LIMITED SUBSURFACE ASSESSMENT

6.1 PRE-ASSESSMENT ACTIVITIES

Prior to the commencement of fieldwork activities, Stantec made the following preparations:

- As required by law, Stantec visited the site to mark the proposed boring locations and acquire a current Underground Service Alert (USA) ticket number prior to commencement of Property drilling activities.
- In accordance with federal OSHA regulations (29 CFR, Section 1910.120), Stantec developed a site-specific Health and Safety Plan (HASP) for the subject property. All Stantec personnel and subcontractors associated with the project were required to be familiar with, and comply with, all provisions of the HASP.

6.2 FIELD INVESTIGATION

To eliminate the potential for vandalism and squatting of vacant structures, the property owner secured a demolition permit to remove the snack bar area structures, and maintenance building located in the southeast corner of the Property and locked-out natural gas line, along with a three-inch-thick concrete layer located two to three feet bgs adjacent to the buildings.

During the demo activities between March and July 2021, Stantec provided the services of a field geologist to supervise and direct all on-site environmental activities. As part of the Property redevelopment activities, the snack bar area and maintenance building located in the southeast corner were razed and the locked-out natural gas line along with the three-inch-thick concrete layer present approximately two to three feet bgs across the eastern-central area were removed under a City of South El Monte demo permit.

On March 16, 2021, during the removal of the three-inch thick concrete layer, an abandoned underground storage tank (UST) was discovered northeast of the natural gas line. Soil samples were collected at both end of the UST to a depth of 10 feet below the in-vent of the tank. At the completion of the demo activities, Stantec advanced fifteen (15) soil vapor points throughout the eastern-central area to evaluate the remaining methane concentrations at the Property (Figure 3). All field work was performed under the supervision of a State of California registered professional geologist and included the following activities:

- Collection of soil samples at both end of the UST to a depth of 10 feet below the in-vent of the tank and analyzed for TPH and VOC by EPA Test Method 8015 and 8260B, respectively.
- Advancement of 15 single-nested soil gas sampling probes throughout the property over the span of four months. Each borehole consisted of one soil gas sampling probes installed at 5 feet bgs;
- Continuous rounds of field screening at each sampling point using a combustible gas meter (GEM 2000 Plus and GEM 5000) between March 19 through July 19, 2021.

6.2.1 Soil Sampling Procedures

Soil borings UST-N and UST-S were advanced using a hand auger at each end of the UST to a depth ten feet bgs. Soil excavated from the borehole was monitored for odors or other visual signs of impact and periodically screened with a MiniRae 3000 PID equipped with a 10.6 electron volt (EV) bulb and calibrated to 100 parts per million by volume (ppmV) isobutylene span gas. Soil samples were collected at depths of one, five, and ten feet below the invent if the tank, for potential chemical analysis.

At each sampling depth, soils were collected directly from the hand auger bucket and discharged into laboratory provided glass sample jars equipped with a Teflon coated screw on lid. The sample container was labeled with the Sample ID, sample depth, time and date of collection and the sampler's initials and recorded on a chain-of-custody documentation. The samples were stored in an ice-chilled cooler pending transport to the laboratory for analysis under chain-of-custody.

6.2.2 Soil Gas Sample Probe Installation Procedures

At the completion of the demolition activities, Stantec advanced four (4) soil vapor probes within the stockpiles, located in the western portion of the site, generated as part of the demo activities along with fifteen (15) soil vapor probes throughout the eastern-central area to evaluate the remaining methane concentrations at the Property (Figure 3) over the span of four months between March 19 and July 19, 2021. The completion soil gas sampling probes were distributed throughout the stockpiles and eastern-central portion of the Property based on the ongoing methane detections at the Site.

Each single completion soil gas sampling probe was installed using a hand auger equipped with a 4-inch outer diameter bucket. Once the borehole depth of 5 feet bgs was reached, the hand augers were extracted and the borehole depth was measured to verify that the hole remained open. Following verification of the borehole depth to 5 feet bgs, a 6-inch sampling screen was connected to dedicated Teflon tubing and lowered to the 5-foot sampling depth. The annulus around the exposed sampling screen was backfilled with a silica sand filter pack to an elevation of about six inches above the sampling interval. Above the filter pack, a 12-inch transition zone was constructed using dry bentonite granules. Hydrated bentonite granules were utilized to seal the annular space from that point to the ground surface. At the surface, the exposed Teflon tubing was capped with tight fitting plastic end-caps and labeled to indicate sampling depth and Sample ID.

6.2.3 Soil Gas Sampling Procedures

Soil gas samples were monitored and collected from the four (4) stockpile probes and the fifteen (15) newly installed probes located in the eastern-central area of the site, and an additional historical probe previously installed at the Property (SB31) during a series of sampling events between March and July of 2021. Following installation of the soil gas probes, three tubing volumes were slow-purged from each sampling point using a variable speed air pump set at a rate of 150 to 200 ml/min. After purging, each of the soil gas sampling points were screened for methane as total combustible gases using GEM 2000 Plus and GEM 5000 combustible gas meters. Soil gas was drawn through the devices and evaluated for methane (in units of parts per million by volume [ppmV]) and biogenic gases (percent oxygen [O_2], percent carbon

dioxide [CO_2], and hydrogen sulfide [ppm H_2S]). Field measurement readings for methane and biogenic gases are summarized in Table 1.

6.2.4 Field Equipment Cleaning Procedures

To maintain quality control during drilling operations, all hand auger rods, and reusable soil sampling equipment was decontaminated using a triple bucket rinse. Prior to drilling at a given location or sampling interval, all equipment coming in direct contact with soil samples was scrubbed with an Alconox scrub solution followed by a clean tap water rinse and then a final distilled water rinse.

6.3 LABORATORY TESTING PROGRAM

All soil gas probes were measured in the field using a GEM 2000 Plus or GEM 5000 combustible gas meter calibrated to read percent methane and biogenic gases (percent oxygen [O_2], percent carbon dioxide [CO_2], and hydrogen sulfide [ppm H_2S]).

6.4 INVESTIGATION FINDINGS

6.4.1 Field Observations

The lithology encountered during the soil vapor sampling activities consisted generally of soils consisting of sandy, gravelly, and clayey deposits. Groundwater was not encountered in any of the borings.

Field readings using the aforementioned combustible gas meters are discussed in Section 8.2 and are summarized on Table 1.

6.4.2 Analytical Results

6.4.2.1 Soil Vapor Results

Stantec monitored methane levels within the four (4) stockpile probes (SV-14 through SV-17), as well as the soil vapor probes located in the eastern-central portion of the Property, between March and July of 2021. The analytical results from each sampling event are presented below.

Stockpile Probes, April 2021

The stockpile probes were monitored three times in April 2021 with no reported detectable concentrations of methane reported in any of the probes during any sampling event. Given the nondetectable concentration of methane in the stockpile probes, no additional methane monitoring was performed after April 2021.

Eastern-Central Soil Vapor Probes Readings

Round 1, March 19, 2021:
Methane was detected at 4.5% by volume at the historical soil gas boring location SB31. Soil vapor probes were reinstalled at locations SV-6 and SV-7 and renamed SV-6A and SV-7A, respectively. Methane was detected at 0.3% at SV-6A and was not detected by the field meter at soil vapor location SV-7A.

Round 2, March 22, 2021:
Methane was present at SB31 at 5.0% by volume. Soil vapor probes SV-7A and SV-6A reported methane concentrations at 0.7% and 0.1%, respectively

Round 3, March 23, 2021:
Due to the continued high concentration of methane present in soil vapor point SB31, two additional probes were installed to the north (SV-12 and SV-13). Soil vapor points SV-6A and SV-7A were assumed destroyed by the demolition activities on site and were note sampled during this round of readings. Methane was detected at 4.8% by volume at SB31. Soil vapor points SV-12 and SV-13 reported methane at 2.6% and 0.7%, respectively

Round 4, April 2, 2021:
Eleven additional soil borings were subsequently advanced to determine the extent of methane at the site surrounding SB31. Soil vapor borings SV-14 through SV-17 were installed to the far west and southwest directions from SB31, SV-18 and SV-19 were installed to the north of SB31 and SV-20 through SV-24 were installed to the immediate west of SB31 following the trend line of the historical gas line located on the Property (Figure 3). Soil vapor point SV-7A was rediscovered and sampled for the remaining rounds. Methane was detected at all borings trending north from SB31 identified in order as SV-12, SV-19, SV-13, and SV-18 as well as the soil vapor points immediately west of SB31 identified as SV-27. Methane was reported between 0.1% through 4.0% by volume. All remaining soil vapor points reported nondetectable concentrations of methane.

Round 5, April 5, 2021:
Methane was detected at borings SB31, SV-12, SV-19, SV-13, and SV-23 between 0.2% through 3.8% by volume. All remaining soil vapor points, including the northern most point from SB31 identified as SV-18, reported nondetectable concentrations of methane.

Round 6, April 7, 2021:
Methane was detected in borings SB31, SV-12, SV-13, and SV-23 between 0.2% through 2.8% by volume. All remaining soil vapor points reported nondetectable concentrations of methane.

Round 7, April 28, 2021:
Six soil borings were sampled and included SB31, SV-7A, SV-12, SV-13, SV-19, and SV-23. Methane was detected at samples SV-12, SV-14, SV-23 and SB31 between 0.1% and 3.2% by volume.

Round 8, May 20, 2021:
Solely soil vapor point SV-12 was sampled for methane and reported a concentration of 0.6% by volume.

Round 8, May 25, 2021:
Soil vapor points SV-12 and SB31 were sampled for methane and reported concentrations of 0.8% and 1.2% by volume, respectively.

Round 9, June 11, 2021:
Soil vapor points SV-12 and SB31 were sampled for methane and reported concentrations of 0.3% and 0.4% by volume, respectively.

Round 10, June 26, 2021:
Soil vapor points SV-12 and SB31 were sampled for methane and reported concentrations of 0.1% and 0.2% by volume, respectively.

Round 11, July 19, 2021:
The remaining soil vapor points available for sampling include SB31, SV-7A, SV-12, SV-13, SV-18, SV-19, and SV-23. All methane detections were nonreportable at 0.0% by volume. Based on the final results of combustible gas survey completed at the eastern-central area as of July 19, 2021, along with the prior methane readings in the soil vapor probes in the remaining areas of the Property, no methane was detected at the Property. Since methane levels were not found above levels of concern (generally considered to be 0.5%, or 5,000 ppmV methane), methane is not a concern at the Property, and Stantec recommends no further assessment regarding methane.

6.4.2.2 UST Soil Removal Results

On March 16, 2021, during the removal of the three-inch thick concrete layer an abandoned UST was discovered northeast of the natural gas line. Soil samples were collected at both end of the UST to a depth of 1, 5 and 10 feet below the invent of the tank and analyzed for TPH and VOC by EPA Test Method 8015 and 8260B, respectively.

- TPH - GRO, TPH -DRO, and TPH-ORO were not reported above laboratory reporting limits in any of the six analyzed samples.
- Trace amounts of VOCs including, 1,2,4-Trimethylbenzene (TMB). 1,3,5-TMB, ethylbenzene, and naphthalene were reported in two of the soil samples collected beneath the UST. The reported VOCs were slightly above the laboratory reporting limits and orders of magnitude below their corresponding residential screening limits.
- Given that the UST was completely empty, and the recent soil sample result collected directly below the tank indicated no release had occurred that exceed current cleanup requirements, the City of South El Monte approved removal of the UST under the existing demo permit on April 19, 2021. Stantec understands that the City of South El Monte is not requiring further assessment or actions regarding the former UST.

7.0 DATA GAPS

The federal AAI final rule [40 CFR 312.10(a)] and ASTM E1527-13 identify a "data gap" as the lack or inability to obtain information required by the standards and practices of the rule despite good faith efforts by the Environmental Professional or the User.

Any data gaps resulting from the Phase I ESA described in this report are listed and discussed below.

Gap	Discussion
Deletions or Exceptions from Scope of Work Referenced in Section 1.4:	None
Weather-Related Restrictions to Site Reconnaissance:	None
Facility Access Restrictions to Site Reconnaissance:	None
Other Site Reconnaissance Restrictions:	None
Data Gaps from Environmental Records Review:	None
Data Gaps from Historical Records Review:	None
Data Gaps from Interviews:	The Property was vacant during the site reconnaissance, and therefore no interview was conducted. Given the historical documents available, the lack of an on-site interview is not considered a significant data gap.
Other Data Gaps:	None

8.0 CONCLUSIONS AND RECOMMENDATIONS

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527 of 2540 Rosemead Boulevard, South El Monte, California 91733, or the “Property”. Any exceptions to, or deletions from, this practice are described in the Data Gaps section of this report. This assessment has revealed the following evidence of recognized environmental conditions (RECs) in connection with the Property:

- **San Gabriel Valley Groundwater Plume**. The Property lies within Area 1 of the San Gabriel Valley Regional Groundwater Superfund plume. The groundwater in this area is contaminated with elevated levels of PCE, TCE, carbon tetrachloride, and other VOCs from multiple point sources within the San Gabriel Valley. Because groundwater in this area of the Property is reported at approximately 50 feet bgs, Stantec initially identified this plume as a REC due to the potential for elevated soil vapor concentrations to exist beneath the Site. That issue no longer appears to be a significant concern, given the low levels of detected VOC concentrations in soil vapor; however, Stantec recommends that either soil vapor barriers be installed, or a post- grading soil vapor survey be performed in connection with future development to confirm the absence of elevated soil vapor concentrations. In addition, due to the fact that the responsible parties have been identified and are addressing the contamination, as well as the lack of evidence that the site operations have contributed to any of the groundwater contamination, the Property owner is not likely liable for cleanup of the Superfund plume.

The following items of note were identified during this assessment:

- **Methane.** In general, significant methane concentrations were only reported in the eastern-central area of the Property and methane concentrations experienced a decreasing trend through the demolition activities of the asphalt cover and three-inch thick concrete layer as they were removed from the eastern-central area of the Property. Final readings collected in July of 2021 reported nonreportable levels of methane within the eastern-central area of the Property (Table 2). Based on the final results of combustible gas survey completed at the eastern-central area as of July 2021 along with the prior methane readings in the soil vapor probes in the remaining areas of the Property, no methane was detected at the Property. Since methane levels were not found above levels of concern (generally considered to be 0.5%, or 5,000 ppmV methane), methane is not a concern at the Property, and Stantec recommends no further assessment be conducted regarding methane.

9.0 NON-SCOPE CONSIDERATIONS

The following ASTM E1527-13 non-scope services were performed as part of this Phase I ESA:

9.1 RADON

Radon is a colorless, tasteless radioactive gas with an EPA-specified action level of 4.0 PicoCuries per liter of air (pCi/L) for residential properties. Radon gas has a very short half-life of 3.8 days. The health risk potential of radon is primarily associated with its rate of accumulation within confined areas near or in the ground, such as basements, where vapors can readily transfer to indoor air from the ground through foundation cracks or other pathways. Large, adequately ventilated rooms generally present limited risk for radon exposure. The radon concentrations in buildings and homes depend on many factors, including soil types, temperature, barometric pressure, and building construction (EPA, 1993).

Stantec reviewed regional data published by the EPA on average indoor radon concentrations in the vicinity of the Property (http://www.epa.gov/radon/zonemap.html).

EPA Radon Zones (w/Average Measured Indoor Radon concentrations)		
Zone 1 – High (>4.0 pCi/L)	Zone 2 – Moderate (2 to 4 pCi/L)	Zone 3 – Low (<2 pCi/L)
	X	

The Property is located in Zone 2 and is considered to have medium potential for radon. The one test from zip code 91733 (the zip code of the Property) was below 4 pCi/L. The average first floor concentration in Los Angeles County is 0.711 pCi/L. To determine Property-specific radon levels, a radon survey would have to be conducted. However, based on the data for the zip code, further investigation of indoor radon issues does not appear to be warranted.

9.2 FLOOD ZONES

According to the Physical Setting summary portion of the EDR report, the Property is not located within a 500-year or 100-year flood plain. Stantec also searched the FEMA flood plain map service at www.msc.fema.gov and could not find active links to maps showing the flood plain designations in Los Angeles County. The nearest surface body of water is the Rio Hondo River located approximately ½ mile to the west of the Property.

Appendix B STANTEC RESUMES

Deborah J Hernandez

Geologic Staff

Stantec

Debbie is a staff geologist hired in September of 2018 at the San Bernardino Office. Through her education at Cal Poly Pomona, Debbie has extensive research and writing experience while conducting thesis work. Field experience ranges from field mapping, rock and soil classification to vast experience utilizing geophysical equipment. Since starting at Stantec, Debbie has applied her knowledge towards Phase I and II Environmental Assessment field work and report preparation. Debbie has also overseen soil vapor extraction projects Debbie completed a GIS certification program through the California University Fullerton and is experienced in ArcGIS 10, Adobe Suite, and the Microsoft Office Suite.

Debbie's environmental consulting experience includes performing Phase I Environmental Site Assessments in accordance with the practices identified in the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation E 1527-13, and the collection, and interpretation of Phase II Environmental Assessment data.

EDUCATION

Bachelor of Science, Geological Sciences, California Polytechnica University, Pomona, Pomona, CA, 2015

CERTIFICATIONS & TRAINING

Geographic Information Systems, California State University, Fullerton, Fullerton, California, 2018

Lead Sampling Technician, National Association of Training and Environmental Consulting, Anaheim, California, 2019

8-Hour Supervisor Trainer Coarse Certification Hazwoper, OSHA, Simi Valley, California, 2018

Adult and Pediatric First Aid/CPR/AED, American Red Cross, San Bernardino, Ca, 2018

Asbestos Building Inspector Initial Course, National Association of Training and Environmental Consulting, Anaheim, California, 2018

PROJECT EXPERIENCE

Soil Vapor Intrusion Assessment/Mitigation Studies (including Methane)

Soil Vapor Intrusion Assessment, Various Locations, California

Debbie performed field oversight during the installation of multiple soil vapor monitoring wells. She assisted with health and safety oversight, classified the soils during drilling activities and assisted with the well installation and subsequent soil vapor sampling.

Groundwater Supply / Wells

Humboldt Energy, Water Supply Assessment

Debbie coauthored a water supply assessment report for a wind energy project located in Humboldt County, California. Through research of groundwater basins and geographic information system analysis, she finalized a report used to supplement the design and construction of over 60 wind turbines and ancillary facilities.

** denotes projects completed with other firms*

Deborah J Hernandez

Geologic Staff

Phase I & II Environmental Site Assessments

Environmental Site Assessment, San Bernardino, Ca

Debbie performed an onsite reconnaissance survey, historical records investigation, and formulated the report deliverable. The report provided a thorough review of the property history and defined present environmental concerns for the client.

Aerial Mapping

Mars Data Analyst, JPL*, Pasadena, Ca (Geology Intern)

Duties included mapping geologic safety hazards using HiRISE, CTX and THEMIS images on ArcGIS; analyzed rock classification and distributions to downselect eight landing sites to four. Characterized over 300 craters and their respective ejecta blankets for potential landing sites. Presented findings at the 2014 Geological Society of America Conference, Abstract #249384

** denotes projects completed with other firms*

Alicia R Jansen CAC, LRCIA

Environmental Scientist

Stantec

Alicia is an Associate Scientist with over ten years of experience in Phase I and II Environmental Assessments, with strong emphasis in water quality and environmental research. She is experienced in California Environmental Quality Act (CEQA) compliance and the preparation of initial studies. Alicia has managed the preparation of environmental documents, training programs, and environmental compliance during large environmental monitoring projects. Alicia's environmental consulting experience includes performing asbestos and lead-based paint surveys, oversight of contractors during asbestos abatement, hazardous materials surveys, and Phase I Environmental Site Assessments in accordance with the practices identified in the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation E 1527-13.

EDUCATION

BA, Environmental Studies, San Jose State University, San Jose, California, 2004

CERTIFICATIONS & TRAINING

Residential Measurement Provider, 108212, National Radon Proficiency Program, Anaheim, California, 2015

REGISTRATIONS

Certified Asbestos Consultant #CAC #15-5379, State of California Division of Occupational Safety and Health

Lead Related Construction Inspector Assessor #19526, California Department of Public Health

MEMBERSHIPS

Member, Groundwater Resources Association of California

PROJECT EXPERIENCE

Health, Safety & Industrial Hygiene

Confidential Health Care Company, Asbestos, Lead-Based Paint, and Hazardous Materials Survey, Northern California (Staff)

Alicia assisted with site inspections for asbestos, lead-based paint, and hazardous materials at multiple occupied hospitals and office spaces. The scope of work involved sample collection for asbestos and lead-based paint in addition to the quantification of universal wastes (PCBs, mercury containing equipment, refrigerants, etc.) that would require special handling and disposal. She assisted with the preparation of reports summarizing findings.

State of California General Services, Asbestos, Lead-Based Paint, and Hazardous Materials Survey, Northern California (Project Lead)

Alicia assisted with site inspections for asbestos, lead-based paint, and hazardous materials at multiple communication towers in remote areas. The scope of work involved sample collection for asbestos and lead-based paint in addition to the quantification of universal wastes (PCBs, mercury containing equipment, refrigerants, etc.) that would require special handling and disposal. She assisted with the preparation of reports summarizing findings.

** denotes projects completed with other firms*

Alicia R Jansen CAC, LRCST

Environmental Scientist

Indoor Air Quality Assessments*, San Jose, California (Staff)
Alicia performed site inspections, interviews, and collected air samples to be analyzed for various air pollutants and molds including formaldehyde, penicillium, aspergillus, cladosporium, and stachybotry. She prepared reports summarizing findings and made recommendations.

Veteran's Administration of Puget Sound, Asbestos and Lead-Based Paint Survey, Seattle, Washington (Project Scientist)
Alicia served as the Project Scientist responsible for hazardous building material assessments, specifically asbestos and lead-based paint. These services were required as part of the pre-design tasks for this project. Over 300 samples were collected over the span of four days culminating in a final hazardous building materials report to be incorporated into the facility design as well as demolition activities once the construction phase of the project commences.

Interim Remedial Action, Indoor Air Sampling, and Sub-Slab Soil Gas Sampling, Sunnyvale, California (Staff)
Alicia conducted an indoor air sampling survey using air sampling pumps, dosimeter badges, and flame ionization detector (FID) during a sump excavation. She performs semi-annual sub-slab soil vapor sampling and indoor air quality surveys using summa canisters. She assists with the preparation and submittal of reports summarizing the findings and provides recommendations to the RWQCB.

Lead Dust Assessment and Abatement Oversight, Fremont, California (Project Scientist)
Alicia assisted with the evaluation of lead dust in an industrial facility. A total of 307 dust wipe samples were collected in order to evaluate the potential presence of lead dust throughout the two-story, 500,000 square foot manufacturing building.

Former Tesoro Coke Facility, Asbestos, Lead-Based Paint Survey, Pittsburg, California (Project Scientist)
Alicia assisted with an asbestos and lead paint survey of 20 structures at the facility ultimately scheduled for demolition. More than 200 samples were collected over the span of two days. A report was prepared that will stand up to regulatory scrutiny for demolition while providing the information needed for worker safety during demolition activities at the facility

Permitting, Compliance, Auditing

Tesoro Refinery, Initial Study*, Benicia, California (Staff)
Alicia assisted with the background research and preparation of applicant-prepared initial study for the upgrade of a refinery.

Transmission Line Upgrade*, San Mateo to San Francisco, California (Staff)
Alicia supported the environmental compliance program for the construction of a 27-mile 230 kV underground and overhead transmission line. She assisted with the preparation and submittal of variance requests, extra work space requests, and daily and weekly reports for submittal to the California Public Utilities Commission. She also conducted research and assisted with training and report preparation.

** denotes projects completed with other firms*

Alicia R Jansen CAC, LRCST

Environmental Scientist

Remedial Investigations & Assessments

Multiple Confidential Clients, Phase I Environmental Site Assessments (ESA), Multiple Sites, California (Project Lead)

Alicia performs Phase I ESA in accordance with the practices identified in the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation E 1527-13 to achieve compliance with requirements of the "All Appropriate Inquiries" rule required to obtain protection from liability under the federal Comprehensive Environmental Response, Cleanup and Liability Act (CERCLA). Previous sites include large industrial warehouses, multi-tenant commercial buildings, and residential properties. She reviews topographic maps, Sanborn Fire Insurance Maps, and files at local regulatory agencies. She interviews present and former property owners and performed site and adjacent property reconnaissance. She prepares reports summarizing the findings and provides recommendations for further assessment if applicable.

California Department of Transportation Portfolio, Multiple Sites, Northern California (Project Lead)

Alicia prepared quarterly groundwater monitoring reports, subsurface investigation reports, sensitive receptor surveys, and preferential pathway studies for various California Department of Transportation locations throughout northern California. She assisted with the utility locating, work plan preparation, field coordination, archived data onto the State Water Resource Control Board's (RWQCB) Geotracker electronic filing system.

Homebuilder, Soil Gas Sampling and Human Health Risk Assessment, San Jose, California (Project Lead)

Alicia performed a soil vapor survey in conformance with the DTSC, Advisory Active Soil Gas Investigations, using a low-dead volume soil vapor sampling device and a mobile laboratory for onsite chemical analysis. She also assisted with the report preparation summarizing the findings and providing recommendations for further assessment, if applicable.

Goodyear Portfolio, Northern California and Hawaii (Project Lead)

Alicia performed Phase I ESAs and Phase II Site Assessments for various Goodyear Tire & Rubber Company locations throughout California and Hawaii. She assisted with the installation of monitoring wells and exploratory borings; underground storage tank removals; site restoration; product removal with passive recovery system; archived data onto the State Water Resource Control Board's Geotracker electronic filing system; and assisted with the preparation of quarterly groundwater monitoring reports, sensitive receptor surveys, site conceptual models, and subsurface investigation reports.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Kyle has more than 28 years of professional experience—17 of those years with Stantec—providing geotechnical and environmental consulting. During the course of his experience, he has been involved with a wide variety of geological and engineering projects. He has been in direct charge of quality control/quality assurance (QA/QC) work for Stantec and previous firms for geological, engineering geological, and environmental services primarily in California. Additionally, Kyle has been a primary contact for Stantec with many different clients (including multi-party actions) and regulatory bodies involving contracting, workplan approvals, site assessments and closures, permitting, remedial action, and litigation support. With regard to litigation services, Kyle has extensive experience providing expert witness testimony, second-party review, and litigation support and analysis.

Kyle's extensive experience includes assessment and remediation of property-specific and regional issues involving soil and groundwater contaminated with petroleum hydrocarbons, chlorinated solvents, heavy metals, pesticides, and PCBs.

He currently serves as the managing principal geologist in Stantec's Redlands, California office.

EDUCATION

Engineering Geology/Hydrogeology, California State University, Los Angeles, California, 1984

AS, General Science, Crafton Hills College, Yucaipa, California, 1975

BS, Geological Sciences, California State University, Long Beach, California, 1982

REGISTRATIONS

Certified Engineering Geologist #1271, State of California Issued 1985, Expires 2011

Professional Geologist #4066, State of California Issued 1985, Expires 2011

PROJECT EXPERIENCE

Bioremediation

Excavation and Treatment of Petroleum-Contaminated Soil

Kyle designed the excavation and treatment of 45,000 cubic yards of petroleum-contaminated soil. Soil treatment included utilizing vapor extraction, combined with bioremediation.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Chemicals & Polymers

Two Former Chemical Plants, Environmental Site Assessments and Remediation, Vernon, California

Mr. Emerson was part of the team for conducting Phase I and Phase II Environmental Site Assessments (ESA) and developing remedial action plans for two former chemical plant sites with 80-year industrial histories. Phase I ESAs used historical files, maps, aerial photographs, available documents, and data from public agencies and historical directories for identifying recognized environmental concerns. Extensive Phase II ESA survey activities aided in identifying below-grade structures such as vaults/USTs, as well as assessing the extent of influence and nature of the contamination. These investigations confirmed the presence of heavy metals, petroleum hydrocarbons, volatile organic compounds, polychlorinated biphenyls, radioactive materials, semi-volatile organic compounds, and polycyclic aromatic compounds in the soils for these sites. Specific areas of concern included former settling ponds, a bone yard, maintenance areas, transformer and substations, wastewater treatment facilities, and above-ground storage tank farms. A conceptual mode was developed for use in a health risk assessment and developed risk-based corrective actions to address potential health and environmental concerns. He assisted with the development and implementation of a remedial action plan, combined administrative controls, engineering controls, and active remediation; this resulted in the cost-effective return of one site to active use, and is reducing health risks to occupants and the public at the second site.

CONFIDENTIAL: Aerospace Adhesives and Coatings Plant, Glendale, California

Mr. Emerson was part of the team that conducted feasibility studies to evaluate remedial alternatives for remediation of chlorinated VOCs, 1,4 dioxane, and hexavalent chromium (CrVI) in soil, soil vapor, and groundwater. Feasibility studies included groundwater pump testing, benchscale column testing to evaluate in situ alternatives for reducing CrVI to the less mobile CrIII valence state, soil vapor extraction, capping, and excavation. Field pilot studies were performed to evaluate the efficiency of various CrVI reductants including the use of ferrous sulfate, calcium polysulfide, emulsified oil, and fructose. Extensive multi-depth soil vapor testing was conducted to evaluate the distribution of VOCs in the subsurface and to support vapor intrusion risk assessment. Feasibility studies were completed in 2008. Remedial actions are expected to be completed in 2011.

Condition Assessments

Assessment and Mitigation of Manufacturing Facility

Kyle managed the assessment and mitigation of an ammunition manufacturing facility covering 1,100 acres in a complex geologic environment. The contaminates involved red and white phosphorous, TNT, chlorinated solvents, solid wastes, and live ordinance.

Soil Contamination Assessment Supervision and Management

Kyle managed and supervised soil contamination assessment and in-situ remediation of heavy metals involving chromium, cadmium, nickel and zinc by chemical fixation to depths in excess of 40 feet below ground surface beneath existing structures within several manufacturing facilities.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Litigation Support and Expert Testimony
Kyle provided litigation support and expert testimony on more than 20 separate projects involving service stations, chlorinated solvent cases, heavy metal, and semi-volatile releases.

Corporate / Office

Commercial Developer - Environmental Remediation of Former Dry Cleaners, El Centro, California
Mr. Emerson was responsible for assessments and remediation at this former dry cleaners which released the dry cleaning chemical tetrachloroethene (PCE) to the ground and underlying groundwater. The work included initial site assessment, agency interaction and negotiations with the California Regional Water Quality Control Board (CRWQCB), and Colorado Basin Region human health risk assessment (HHRA), design and implementation of remedial investigations, feasibility studies, remedial action plans, and implementation of remediation in mitigating chlorinated solvent contamination in vadose and saturated zones at concentrations indicative of DNAPL. The results of the completed remediation, as well as continued confirmation sampling and monitoring, allowed the CRWQCB to issue site closure in 2008. The site has since been redeveloped into a new commercial development.

Environmental Assessments

Siting Studies
Kyle performed initial siting studies for potential Class I, II, and III landfills. The project included detailed geologic mapping, hydrogeological studies, and permeability studies of caps and liners.

Environmental Site Remediation

Assessment and Remedial Design, California (Project Supervisor)
Kyle supervised the assessment and remedial design of a system to eliminate salt brine contamination in shallow perched water horizons in the Yucaipa, San Bernardino, and Riverside areas of southern California.

Design and Installation of Recovery Systems*
Kyle designed and installed numerous free-product recovery systems that successfully recovered product. One of the sites contained product up to 11-feet thick covering more than three city blocks. The dissolved phase had affected a multi-aquifer system and a public drinking water system.

Geophysical Characterizations*
Kyle performed and supervised numerous geophysical characterizations to determine the extent of old landfills. He provided classification studies, landfill gas monitoring, removal verification during grading, methane collection and mitigation plans, permitting, and closure plans.

Domestic Landfill Development*
Kyle designed and supervised the dynamic consolidation of a domestic landfill for development. He used this process to minimize expected settlement to overlying structures. Kyle designed commercial developments on closed landfills that involved complex methane collection and monitoring systems and building settlement controls.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Clay Borrow Site Studies

Kyle performed more than 10 separate clay borrow site studies for determining sources of material to cap landfills; ranged from a 20-acre dry lakebed to a 450-acre parcel in complex folded marine sediments.

Assessment, Clean Up, and Regulatory Support Management, Santa, Monica (Project Manager)

Kyle managed the assessment, clean up, and complex regulatory support of a PRP site in an MTBE case (Charnock subbasin). His work involved more than 20 environmental professionals working full time for two years to complete the assessment and clean up mandated by the regulatory agencies.

Hazardous Waste

San Gabriel Valley Superfund Site, Remediation & Closure of Multiple Source Areas, Industry, California

Mr. Emerson performed feasibility studies to evaluate appropriate and relevant remedial alternatives to mitigate constituents of concern in five AOCs contaminated with chlorinated hydrocarbons, heavy metals, petroleum fuel, and cutting oils. Ultimately, a combination of remedial alternatives was implemented that included large-diameter auger excavation to 45 feet to minimize impacts on facility operations, vapor extraction, vapor intrusion risk assessment, deed restriction, and monitored natural attenuation. At the completion of remedial actions, confirmation soil, soil vapor, and groundwater sampling were conducted and followed with risk assessment to demonstrate that remedial objectives had been achieved. No further action was recently granted by the US EPA and Los Angeles Regional Water Quality Control Board.

Mixed-Use

Port of San Diego Rohr Facility, Chula Vista, California

Mr. Emerson assisted in a detailed subsurface assessment of the Rohr facility. The intent of the assessment was to evaluate the 40-acre former aircraft part manufacturing facility for acquisition by the Port of San Diego for redevelopment into a business park and entertainment complex. The assessment identified the presence of soil, soil vapor, and groundwater impacts by petroleum hydrocarbons, VOCs, heavy metals, PCBs, and semi-volatile organic compounds. He utilized many sampling techniques to assess the limits and concentrations of contaminants in the subsurface. Ultimately, the team was able to develop a cost estimate for potential remedial action cost associated to corrective action to allow redevelopment.

Master Planned Commercial/Residential Redevelopment Project, Whittier, California (Project Manager)

Kyle oversaw the assessment of 26 contiguous properties that are part of a 21-acre master planned commercial/residential redevelopment project. The properties included industrial facilities, platting lines, fuel USTs, and metal processing plants, among others. The estimated cleanup costs are approximately $2 million.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Multi-Unit / Family Residential

Residential Development Assessment, Ventura, California (Project Director)

Kyle directed an assessment of a 40-acre former agricultural property proposed for residential development. Pesticides were identified above hazardous waste levels and preliminary remediation goals established by the U.S. Environmental Protection Agency. Through corrective grading methods and onsite placement of the pesticide impacted soils, all material were re-used on site without offsite disposal. The over all cost savings for the client was more than $1 million. Total cost was less than $250,000 for all necessary activities.

Oil & Gas

Oil Field Site Assessments*

Kyle performed site assessments at oil field leases involving refineries, bulk storage areas, piping systems and wellhead, and drilling mud pit contamination.

Environmental Protection Agency Superfund Action, Culver City, California (Project Manager)

Kyle served as the project manager representing a major oil company in the assessment, remedial action, and litigation support in a multi-party contamination case affecting a City water supply. The assessment involved more than 250 continuous core borings up to 100 feet, as well as extensive remedial actions. The total cost for all related activities was $22 million. The case is settled and the closure of the site is pending.

Project Management

Liability and Property Management Consulting Services

Kyle is providing liability and property management consulting services to more than 10 medium to large property development firms in the US. His work involves property transaction assessments, contract review, acquisition guideline development, liability management evaluation, insurance acquisition, and strategic planning.

Residential Development

Environmental Development Management and Review (Project Manager)

Kyle manages and reviews environmental development issues for a large residential developer specializing in development of contaminated industrial properties by providing innovative solutions in developing contaminated properties for residential use through risk assessment, engineering, and administrative and property development controls.

Site Management and Remediation

Design and Implementation of Biodegradation Programs*, California

Kyle designed and implemented one of the first in-situ biodegradation programs in California; it involved 50,000 cubic yards of diesel-contaminated soils, and groundwater to depths of 70 feet below ground surface.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Soil and Groundwater Remediation Systems

Soil and Groundwater Contamination Assessments and Mitigation*, California (Project Manager)

Kyle managed numerous chlorinated solvent soil and groundwater contamination assessments and mitigation programs in southern California. The projects involved releases that impacted soil and groundwater to depth of groundwater more than 700 feet in multi-aquifer systems. One case involved with plume dimensions more than 1 mile from the source affecting residential properties.

Soil and Groundwater Assessment and Remediation Programs*

Implemented hundreds of soil and groundwater assessment and remediation programs at various service station facilities in Southern and Northern California, and Nevada. Work involved assessment, remedial design, installation, maintenance and monitoring. Closure has been received on a majority of these sites.

Assessment and Remediation Management*

Kyle managed the assessment and remediation of soil and groundwater manufacturing at dry cleaning facilities contaminated with chlorinated solvents.

Warehouse / Light Industrial

Glendale Redevelopment Project, Glendale, California (Project Manager)

Kyle managed the assessment and remedial actions during the redevelopment of and industrial property. The project involved the demolition of a historic manufacturing facility and a commercial dry cleaner. Each of these facilities were associated with releases of solvents and petroleum hydrocarbons. Remedial actions involved excavation by pattern drilling and off site disposal along with removal of former USTs. The total cost of remediation and assessment was $450,000.00.

Compton Redevelopment Project, Compton, California (Project Manager)

Kyle is serving as project manager for the assessment and remedial actions for a large redevelopment project. The project involves the redevelopment of a historic manufacturing facility and a former dry cleaner. Each of these facilities were associated with releases of solvents and petroleum hydrocarbons. The industrial facility was also associated with significant volumes of buried waste that required removal and disposal. These wastes also included the chemical referenced above, as well as PCBs and heavy metals. Remediation has included excavation, vapor extraction, and chemical fixation. The total cost of this project has been $2.8 million to date.

Appendix C USER PROVIDED RECORDS

Stantec

PHASE I ESA USER'S QUESTIONNAIRE

In order to qualify for protection from land owner liability under CERCLA as an *innocent landowner, bona fide prospective purchaser,* or *contiguous property owner*, ASTM standard practice E1527-13 and the federal AAI rule (40 CFR 312) require that the User of the Phase I ESA report provide certain information (if available) to the Environmental Professional completing the assessment. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. Information that is not or cannot be provided to the Environmental Professional may be identified as a "data gap" in the Phase I ESA report.

Please answer the following questions as completely as possible. Attach additional pages as needed. Return the completed questionnaire to Stantec along with the executed Authorization For services form.

1. Property Information

Property Name: Starlite Swap Meet______________________________

Property Address(es): 2540 Rosemead Blvd______________________________

City: South El Monte______________________State CA__Zip 91733________________

Property Owner Name: California T.C. Group, L.P.______________________________

Property Owner Phone #: 617-710-0079

2. Contact For Site Access

Name: Monica Tsai______________________________

Company/Organization/Title: Property Manager______________________________

Phone # 626-456-1195______________ E-Mail Address: MonicaMaple1764@gmail.com_______

3. Environmental Cleanup Liens. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

__________ Yes ___x_______ No

If yes, describe or attach details of the lien ______________________________

____

4. Activity and Land Use Limitations. Are you aware of any activity and use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded as applicable to the property as a result of environmental contamination, investigation, cleanup, or related matters?

__________ Yes ______x____ No

If yes, describe or attach details of the limitations ______________________________

____

5. <u>Specialized Knowledge or Experience.</u> As the User of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property, such that you would have specialized knowledge about chemicals and processes used by this type of business?

__________ Yes _____x_____ No

If yes, describe or attach details of your specialized knowledge or experience __________
____

6. <u>Relationship of Purchase Price to Fair Market Value of Property.</u> Does the purchase price being paid for the property reasonably reflect the fair market value?

x______Yes _______No

_______Not applicable. User is not involved in a purchase of the property.

If you conclude that there is a difference, do you have any reason to believe that the reduced purchase price may be related to contamination known or believed to be present at the property?

_________Yes, I have reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property.

x_________No, I have no reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property.

7. <u>Commonly Known or Reasonably Ascertainable Information.</u> Are you aware of commonly known or reasonably ascertainable information about the property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases of hazardous substances or petroleum products? For example:

Do you know the past uses of the property?
x_________Yes (describe) Swap meet and drive in movie theater______________
____
____
____
_________No

Do you know of chemicals, hazardous substances or petroleum products that are present or once were present at the property?
x_________Yes (describe) Previously identified methane_____________________
____
____
____
_________No

Do you know of spills or other releases of chemicals, hazardous substances or petroleum products that have taken place at the property?

_________Yes (describe) ____

x________No

Do you know of any environmental cleanups that have taken place at the property?

_________Yes (describe) ____

x________No

8. The Degree of Obviousness of Contamination. E1527-13 and the federal AAI rule (40 CFR 312.31) require that the Phase I ESA consider the degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation. Based on your knowledge and experience related to the property, are there any *obvious* indictors that point to the presence or likely presence of contamination at the property?

x________Yes (describe) Previously identified methane____________________

_________No

9. Availability of Previous Environmental Reports. Are you aware of previous environmental site assessment reports, other environmental reports, documents, correspondence, etc. concerning the property and its environmental condition?

x________Yes (describe) _____Previous Phase I________________________

_________No

PRELIMINARY REPORT

In response to the above referenced application for a policy of title insurance, this company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a Policy or Policies of Title Insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an Exception below or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations of said Policy forms.

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Exhibit A attached. *The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties.* Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Exhibit A. Copies of the policy forms should be read. They are available from the office which issued this report.

Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Exhibit A of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

Dated as of May 28, 2020 at 7:30 A.M.

The form of Policy of title insurance contemplated by this report is:

To Be Determined

A specific request should be made if another form or additional coverage is desired.

Title to said estate or interest at the date hereof is vested in:

CALIFORNIA T.C. GROUP, A CALIFORNIA LIMITED PARTNERSHIP

The estate or interest in the land hereinafter described or referred to covered by this Report is:

A fee.

The Land referred to herein is described as follows:

(See attached Legal Description)

At the date hereof exceptions to coverage in addition to the printed Exceptions and Exclusions in said policy form would be as follows:

1. General and special taxes and assessments for the fiscal year 2020-2021, a lien not yet due or payable.

2. The lien of supplemental taxes, if any, assessed pursuant to Chapter 3.5 commencing with Section 75 of the California Revenue and Taxation Code.

3. An easement for Pipelines for the transportation of gas and incidental purposes, recorded October 28, 1948 as Instrument No. 2271 in Book 28898, Page 381 of Official Records.
   In Favor of: Southern California Gas Company and Southern Counties Gas Company
   Affects: Parcel 1

4. An easement for pipelines for the transportation of gas and incidental purposes, recorded April 6, 1949 as Instrument No. 2396 in book 29773, Page 298 of Official Records.
   In Favor of: Southern California Gas Company and Southern Counties Gas Company
   Affects: Parcel 2

5. The terms and provisions contained in the document entitled Covenant and Agreement recorded January 26, 1961 as Book M-692, Page 895 of Official Records.

   (Affects Parcel 3)

6. An easement for Covered storm drain and appurtenant structures and incidental purposes, recorded January 23, 1975 as Instrument No. 2108 of Official Records.
   In Favor of: Los Angeles County Flood Control District
   Affects: As described therein

7. An easement for Covered storm drain and appurtenant structures and incidental purposes, recorded March 21, 1975 as Instrument No. 4495 of Official Records.
   In Favor of: Los Angeles County Flood Control District
   Affects: As described therein

8. A deed of trust to secure an original indebtedness of $6,000,000.00 recorded August 04, 1989 as Instrument No. 89-1255916 of Official Records.
   Dated: July 15, 1989
   Trustor: California T.C. Group, A California Limited Partnership
   Trustee: American Securities Company, A Corporation
   Beneficiary: Wells Fargo Bank, National Association

   Affects: The land and other property.

   The above deed of trust states that it secures an equity line/revolving line of credit.

   A document recorded August 03, 1994 as Instrument No. 94-1435982 of Official Records provides that the deed of trust or the obligation secured thereby has been modified.

   A document recorded July 31, 2001 as Instrument No. 01-1365458 of Official Records provides that the deed of trust or the obligation secured thereby has been modified.

   A document recorded August 18, 2006 as Instrument No. 06-1842381 of Official Records provides that the deed of trust or the obligation secured thereby has been modified.

9. The fact that the land lies within the boundaries of the South El Monte Improvement District Project No. 3 Redevelopment Project Area Redevelopment Project Area, as disclosed by the document recorded July 17, 1998 as Instrument No. 98-1223608 of Official Records.

   (Affects Parcel 3)

10. The terms and provisions contained in the document entitled "Memorandum of Understanding" recorded July 01, 2009 as Instrument No. 20090994724 of Official Records.

11. Prior to the issuance of any policy of title insurance, the Company will require:

12. With respect to CALIFORNIA T.C. GROUP, a California limited partnership:
a. That a certified copy of the certificate of limited partnership (form LP-1) and any amendments thereto (form LP-2) be recorded in the public records;
b. A full copy of the partnership agreement and any amendments;
c. Satisfactory evidence of the consent of a majority in interest of the limited partners to the contemplated transaction;
d. Other requirements which the Company may impose following its review of the material required herein and other information which the Company may require.

INFORMATIONAL NOTES

Note: The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than the certain dollar amount set forth in any applicable arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. If you desire to review the terms of the policy, including any arbitration clause that may be included, contact the office that issued this Commitment or Report to obtain a sample of the policy jacket for the policy that is to be issued in connection with your transaction.

13. Taxes for proration purposes only for the fiscal year 2019-2020.

First Installment:	$38,451.25, PAID
Second Installment:	$38,451.21, PAID
Tax Rate Area:	12376; 03975 AND 03976
APN:	8102-037-020; 8102-037-022; 8102-037-024 AND 8102-035-017

The map attached, if any, may or may not be a survey of the land depicted hereon. First American expressly disclaims any liability for loss or damage which may result from reliance on this map except to the extent coverage for such loss or damage is expressly provided by the terms and provisions of the title insurance policy, if any, to which this map is attached.

LEGAL DESCRIPTION

Real property in the City of South El Monte, County of Los Angeles, State of California, described as follows:

PARCEL 1: (APN: 8102-037-020 AND 8102-037-022)

PARCEL 1 OF CERTIFICATE OF COMPLIANCE /LOT LINE ADJUSTMENT RECORDED MARCH 18, 2016 AS INSTRUMENT NO. 20160296565 OF OFFICIAL RECORDS, BEING THAT PORTION OF LOT 30, TRACT NO. 621, IN THE CITY OF SOUTH EL MONTE, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS SHOWN ON MAP FILED IN BOOK 15, PAGES 182 AND 183 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, WITHIN THE FOLLOWING DESCRIBED BOUNDARIES:

BEGINNING AT A POINT IN THE EASTERLY LINE OF SAID LOT DISTANT NORTHERLY THEREON 100 FEET FROM THE SOUTHEASTERLY CORNER OF SAID LOT; THENCE NORTHWESTERLY IN A DIRECT LINE TO A POINT IN THE NORTHERLY LINE OF THE SOUTHERLY 200 FEET OF SAID LOT DISTANT WESTERLY THEREON 100 FEET FROM SAID EASTERLY LINE; THENCE WESTERLY ALONG SAID NORTHERLY LINE TO THE WESTERLY LINE OF THE EASTERLY 200 FEET OF SAID LOT; THENCE NORTHERLY ALONG SAID WESTERLY LINE TO THE NORTHERLY LINE OF THE SOUTHERLY 300 FEET OF SAID LOT; THENCE WESTERLY ALONG SAID LAST MENTIONED NORTHERLY LINE TO THE EASTERLY LINE OF THE WESTERLY 52 FEET OF SAID LOT; THENCE NORTHERLY ALONG SAID LAST MENTIONED EASTERLY LINE TO THE NORTHERLY LINE OF THE SOUTHERLY 500 FEET OF SAID LOT; THENCE EASTERLY ALONG SAID LAST MENTIONED NORTHERLY LINE TO THE WESTERLY LINE OF THE EASTERLY 100 FEET OF SAID LOT; THENCE NORTHERLY ALONG SAID LAST MENTIONED WESTERLY LINE TO THE NORTHERLY LINE OF SAID LOT; THENCE EASTERLY ALONG SAID LAST MENTIONED NORTHERLY LINE TO THE NORTHEASTERLY CORNER OF SAID LOT; THENCE SOUTHERLY ALONG THE EASTERLY LINE OF SAID LOT TO THE POINT OF BEGINNING.

PARCEL 2: (APN: 8102-037-024)

NOTICE

Section 12413.1 of the California Insurance Code, effective January 1, 1990, requires that any title insurance company, underwritten title company, or controlled escrow company handling funds in an escrow or sub-escrow capacity, wait a specified number of days after depositing funds, before recording any documents in connection with the transaction or disbursing funds. This statute allows for funds deposited by wire transfer to be disbursed the same day as deposit. In the case of cashier's checks or certified checks, funds may be disbursed the next day after deposit. In order to avoid unnecessary delays of three to seven days, or more, please use wire transfer, cashier's checks, or certified checks whenever possible.

EXHIBIT A
LIST OF PRINTED EXCEPTIONS AND EXCLUSIONS (BY POLICY TYPE)

CLTA STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public, records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material unless such lien is shown by the public records at Date of Policy.

CLTA/ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;
   c. that result in no loss to You; or
   d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.
5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:
For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.
The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1% of Policy Amount Shown in Schedule A or $2,500 (whichever is less)	$10,000
Covered Risk 18:	1% of Policy Amount Shown in Schedule A or $5,000 (whichever is less)	$25,000
Covered Risk 19:	1% of Policy Amount Shown in Schedule A or $5,000 (whichever is less)	$25,000
Covered Risk 21:	1% of Policy Amount Shown in Schedule A or $2,500 (whichever is less)	$5,000

2006 ALTA LOAN POLICY (06-17-06)
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to

   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;

(iii) the subdivision of land; or
(iv) environmental protection;

or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
(b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
(a) created, suffered, assumed, or agreed to by the Insured Claimant;
(b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
(c) resulting in no loss or damage to the Insured Claimant;
(d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or
(e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
(a) a fraudulent conveyance or fraudulent transfer, or
(b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

[Except as provided in Schedule B - Part II,[t[or T]his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

[PART I

[The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material unless such lien is shown by the Public Records at Date of Policy.

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:]

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to

(i) the occupancy, use, or enjoyment of the Land;
(ii) the character, dimensions, or location of any improvement erected on the Land;
(iii) the subdivision of land; or
(iv) environmental protection;

or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
(b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.

2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
(a) created, suffered, assumed, or agreed to by the Insured Claimant;
(b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
(c) resulting in no loss or damage to the Insured Claimant;
(d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 or 10); or
(e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
(a) a fraudulent conveyance or fraudulent transfer, or
(b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:
[The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material unless such lien is shown by the Public Records at Date of Policy.
7. [Variable exceptions such as taxes, easements, CC&R's, etc. shown here.]

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (07-26-10)
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to

(i) the occupancy, use, or enjoyment of the Land;
(ii) the character, dimensions, or location of any improvement erected on the Land;
(iii) the subdivision of land; or
(iv) environmental protection;

or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
(b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d),

14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
(a) created, suffered, assumed, or agreed to by the Insured Claimant;
(b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
(c) resulting in no loss or damage to the Insured Claimant;
(d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
(e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
(a) a fraudulent conveyance or fraudulent transfer, or
(b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

Privacy Notice

Effective: January 1, 2020

Notice Last Updated: January 1, 2020

This Privacy Notice describes how First American Financial Corporation and its subsidiaries and affiliates (together referred to as "First American," "we," "us," or "our") collect, use, store, and share your information. This Privacy Notice applies to information we receive from you offline only, as well as from third parties. For more information about our privacy practices, please visit https://www.firstam.com/privacy-policy/index.html. The practices described in this Privacy Notice are subject to applicable laws in the places in which we operate.

What Type Of Information Do We Collect About You? We collect both **personal** and **non-personal information** about and from you. **Personal information** is non-public information that can be used to directly or indirectly identify or contact you. **Non-personal information** is any other type of information.

How Do We Collect Your Information? We collect your **personal** and **non-personal information:** (1) directly from you; (2) automatically when you interact with us; and (3) from third parties, including business parties and affiliates.

How Do We Use Your Information? We may use your personal information in a variety of ways, including but not limited to providing the services you have requested, fulfilling your transactions, comply with relevant laws and our policies, and handling a claim. We may use your **non-personal information** for any purpose.

How Do We Share Your Personal Information? We do not sell your **personal information** to nonaffiliated third parties. We will only share your **personal information**, including to subsidiaries, affiliates, and to unaffiliated third parties: (1) with your consent; (2) in a business transfer; (3) to service providers; and (4) for legal process and protection. If you have any questions about how First American shares your **personal information**, you may contact us at dataprivacy@firstam.com or toll free at 1-866-718-0097.

How Do We Secure Your Personal Information? The security of your **personal information** is important to us. That is why we take commercially reasonable steps to make sure your **personal information** is protected. We use our best efforts to maintain commercially reasonable technical, organizational, and physical safeguards, consistent with applicable law, to protect your **personal information**.

How Long Do We Keep Your Personal Information? We keep your **personal information** for as long as necessary in accordance with the purpose for which it was collected, our business needs, and our legal and regulatory obligations.

Your Choices We provide you the ability to exercise certain controls and choices regarding our collection, use, storage, and sharing of your **personal information**. In accordance with applicable law, your controls and choices. You can learn more about your choices, and exercise these controls and choices, by sending an email to dataprivacy@firstam.com or toll free at 1-866-718-0097.

International Jurisdictions: Our Products are hosted and offered in the United States of America (US), and are subject to US federal, state, and local law. If you are accessing the Products from another country, please be advised that you may be transferring your **personal information** to us in the US, and you consent to that transfer and use of your **personal information** in accordance with this Privacy Notice. You also agree to abide by the applicable laws of applicable US federal, state, and local laws concerning your use of the Products, and your agreements with us.

We may change this Privacy Notice from time to time. Any and all changes to this Privacy Notice will be reflected on this page, and where appropriate provided in person or by another electronic method. **YOUR CONTINUED USE, ACCESS, OR INTERACTION WITH OUR PRODUCTS OR YOUR CONTINUED COMMUNICATIONS WITH US AFTER THIS NOTICE HAS BEEN PROVIDED TO YOU WILL REPRESENT THAT YOU HAVE READ AND UNDERSTOOD THIS PRIVACY NOTICE.**

First American Title™

For California Residents

If you are a California resident, you may have certain rights under California law, including but not limited to the California Consumer Privacy Act of 2018 ("CCPA"). All phrases used in this section shall have the same meaning as those phrases are used under California law, including the CCPA.

Right to Know. You have a right to request that we disclose the following information to you: (1) the categories of **personal information** we have collected about or from you; (2) the categories of sources from which the **personal information** was collected; (3) the business or commercial purpose for such collection and/or disclosure of your personal information; (4) the categories of third parties with whom we have shared your **personal information**; and (5) the specific pieces of your **personal information** we have collected. To submit a verified request for this information, go to our online privacy policy at www.firstam.com/privacy-policy to submit your request or call toll-free at 1-866-718-0097. You may also designate an authorized agent to submit a request on your behalf by going to our online privacy policy at www.firstam.com/privacy-policy to submit your request or by calling toll-free at 1-866-718-0097 and submitting written proof of such authorization to dataprivacy@firstam.com.

Right of Deletion. You also have a right to request that we delete the **personal information** we have collected from you. This right is subject to certain exceptions available under the CCPA and other applicable law. To submit a verified request for deletion, go to our online privacy policy at www.firstam.com/privacy-policy to submit your request or call toll-free at 1-866-718-0097. You may also designate an authorized agent to submit a request on your behalf by going to our online privacy policy at www.firstam.com/privacy-policy to submit your request or by calling toll-free at 1-866-718-0097 and submitting written proof of such authorization to dataprivacy@firstam.com.

Verification Process. For either a request to know or delete, we will verify your identity before responding to your request. To verify your identity, we will generally match the identifying information provided in your request with the information we have on file about you. Depending on the sensitivity of the personal information requested, we may also utilize more stringent verification methods to verify your identity, including but not limited to requesting additional information from you and/or requiring you to sign a declaration under penalty of perjury.

Right to Opt-Out. We do not sell your personal information to third parties, and do not plan to do so in the future.

Right of Non-Discrimination. You have a right to exercise your rights under California law, including under the CCPA, without suffering discrimination. Accordingly, First American will not discriminate against you in any way if you choose to exercise your rights under the CCPA.

Collection Notice. The following is a list of the categories of personal information we may have collected about California residents in the twelve months preceding the date this Privacy Notice was last updated, including the business or commercial purpose for said collection, the categories of sources from which we may have collected the personal information, and the categories of third parties with whom we may have shared the personal information:

Categories of Personal Information Collected	The categories of personal information we have collected include, but may not be limited to: real name; signature; alias; SSN; physical characteristics or description, including protected characteristics under federal or state law; address; telephone number; passport number; driver's license number; state identification card number; IP address; policy number; file number; employment history; bank account number; credit card number; debit card number; financial account numbers; commercial information; internet or other electronic network activity; geolocation data; audio and visual information; professional or employment information; and inferences drawn from the above categories to create a profile about a consumer.
Categories of Sources	Categories of sources from which we've collected **personal information** include, but may not be limited to: the consumer directly; public records; governmental entities; non-affiliated third parties; social media networks; affiliated third parties
Business Purpose for Collection	The business purposes for which we've collected **personal information** include, but may not be limited to: completing a transaction for our Products; verifying eligibility for employment; facilitating employment; performing services on behalf of affiliated and non-affiliated third parties; debugging to identify and repair errors that impair existing intended functionality on our Websites, Applications, or Products; protecting against malicious, deceptive, fraudulent, or illegal activity

Categories of Third Parties Shared	The categories of third parties with whom we've shared **personal information** include, but may not be limited to: advertising networks; internet service providers; data analytics providers; service providers; government entities; operating systems and platforms; social media networks; non-affiliated third parties; affiliated third parties

Categories of Personal Information We Have Sold In The Past Year. We have not sold any personal information of California residents to any third party in the twelve months preceding the date this Privacy Notice was last updated.

Categories of Personal Information Disclosed For A Business Purpose In The Past Year. The following is a list of the categories of **personal information** of California residents we may have disclosed for a business purpose in the 12 months preceding the date this Privacy Notice was last updated: The categories of personal information we have collected include, but may not be limited to: real name; signature; alias; SSN; physical characteristics or description, including protected characteristics under federal or state law; address; telephone number; passport number; driver's license number; state identification card number; IP address; policy number; file number; employment history; bank account number; credit card number; debit card number; financial account numbers; commercial information; internet or other electronic network activity; geolocation data; audio and visual information; professional or employment information; and inferences drawn from the above categories to create a profile about a consumer.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

2540 ROSEMEAD BLVD,
SOUTH EL MONTE, CA 91733

COORDINATES

Latitude (North):	34.0583620 - 34˚ 3' 30.10''
Longitude (West):	118.0637050 - 118˚ 3' 49.33''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	401832.0
UTM Y (Meters):	3768942.8
Elevation:	241 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 04/27/2021 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/27/2021 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2021 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 21 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/23/2021 has revealed that there are 13 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 27 LUST sites within approximately 0.5 miles of the target property.
